Relative Performance	26
Universe Analysis	42

Economy

- Global economic growth remained strong during the first quarter of 2018, although growth rates moderated somewhat from 2017. Continued progress in the US economy and signs of increasing inflationary pressures prompted the Federal Reserve to raise interest rates once again in March, bringing the fed funds rate (1.50% to 1.75% target rate) to its highest level since 2008.
- The labor market continued to strengthen during the quarter, as the US economy added 605,000 jobs over the period; the unemployment rate was unchanged at 4.1%, matching its lowest level since December 2000. The US economy has experienced positive job growth for 90 consecutive months, the longest streak since labor market data collection began in the 1940s.
- Real GDP in the US grew at a 2.3% annualized rate during the first quarter of 2018, according to the initial estimate released by the Bureau of Economic Analysis. Compared to the fourth quarter of 2017, when the economy grew at a 2.9% annualized rate, the decline in consumer spending more than offset the increase in business investment. Overall, GDP growth was 2.6% for 2017 and 1.8% for 2016.
- Economic activity in both the manufacturing and services sectors continued to expand in the first quarter. The US ISM Manufacturing PMI ended the quarter at 59.3, while the Non-Manufacturing (or services) PMI was 58.8; index readings over 50 imply expansion in the sector. Global PMI levels were also consistently high in 2017, reflecting the broad-based pickup in global economic activity.

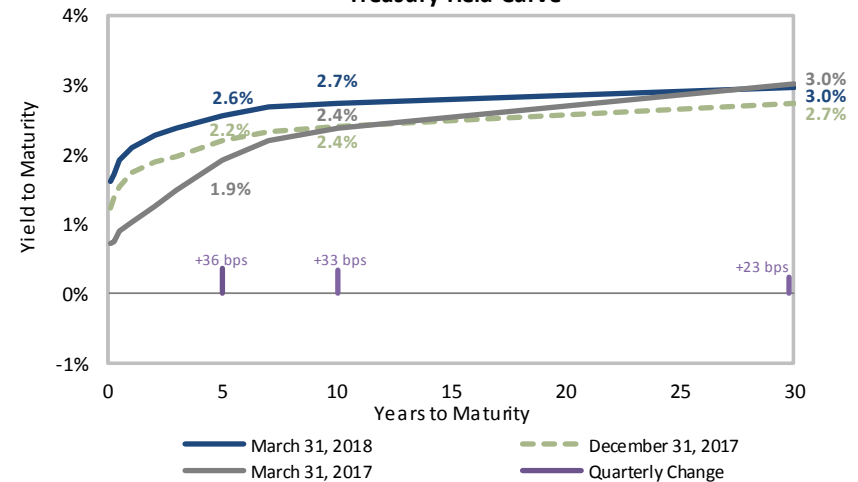

Yield Curve

- The spread between 2-year and 30-year Treasuries tightened 15 bps to 71 bps during the quarter, its lowest level since 2007. The tightening has primarily been a result of short-term rate increases by the Federal Reserve, while long-term rates have remained relatively anchored. The 20-year average spread between 2-year and 30-year Treasuries is 193 bps.

Growth Assets

March 31, 2018

Public Equities

- Global equity markets declined for the first quarter since Q3 2015, as strong gains during January were more than offset by losses during February and March. Across segments of the global equity market, emerging markets and US large cap tech stocks continued to outperform and the growth style once again outperformed value. MSCI ACWI IMI gained 15.0% for the 12 months ending March 2018.
- Master limited partnerships (MLPs) returned -11.1% for the quarter, with a ruling from the Federal Energy Regulatory Commission (FERC) negatively impacting sentiment for the asset class. While the FERC ruling will affect a relatively small subset of the universe, MLPs broadly declined for the quarter. As a result, the trailing 12-month distribution yield for the Alerian MLP Index, as published by Alerian, rose 119 bps to 8.8% during the quarter.

Public Debt

- High yield bonds declined modestly during the quarter, with the yield on the Bloomberg Barclays High Yield Index rising 47 bps to 6.19%. Rising interest rates as well as declining risk assets contributed to declines for high yield.
- Local currency emerging market debt returned 1.4%, with continued strong demand for emerging market assets providing a tailwind for performance. Yields declined 13 bps to 6.0%, matching their lowest levels since January 2015.

Private Assets

- Fundraising recovered in Q4 2017, as Prequin estimated total commitments of \$162B versus \$96B the quarter prior. 2017 represented a record year for private equity fundraising, as 1,420 funds secured a combined \$754B in commitments, surpassing the 2016 record of \$728B raised by 1,860 funds. This increase in capital has caused LBO purchase price multiples to rise above 10x EBTIDA, following a slight decline in 2016.
- Leverage multiples have increased to over 5.7x EBTIDA in 2017, following a decline in 2016. We continue to see robust demand for private debt funds, as momentum increased in Q4 2017. This ongoing demand from investors has helped support higher leverage levels and kept a ceiling in place for average loan spreads.

Hedge Funds

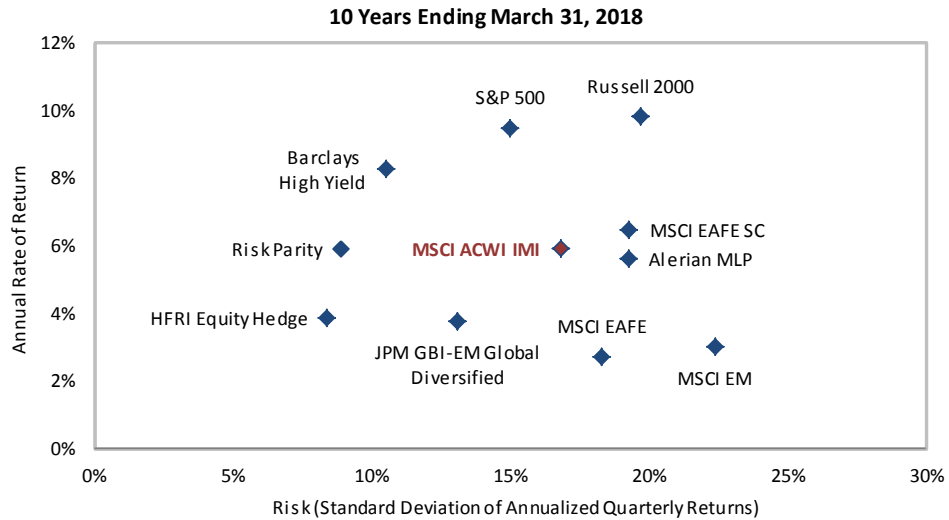

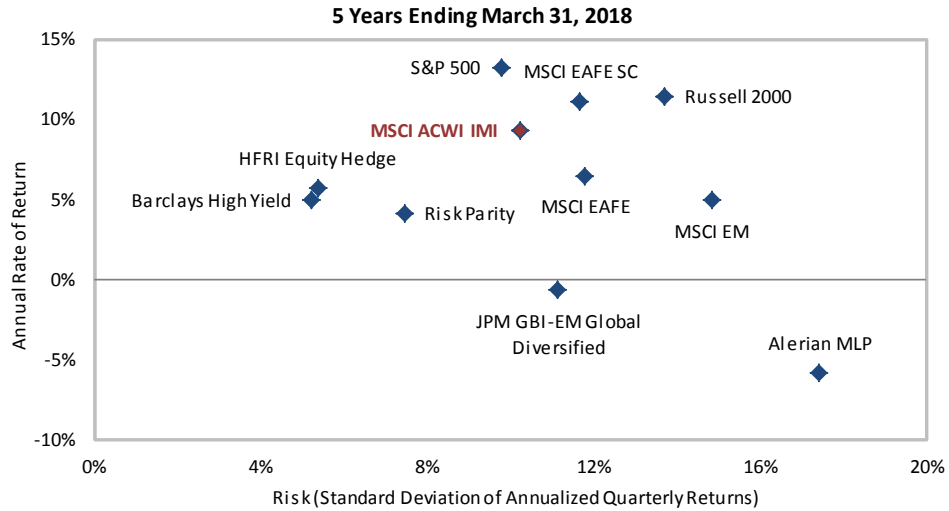

- Risk parity strategies in aggregate saw modest declines during the quarter, consistent with losses across major asset classes.
- Growth hedge funds gained during the quarter despite equity market declines. Technology/healthcare-focused funds delivered the strongest performance, while event-driven strategies were also positive.

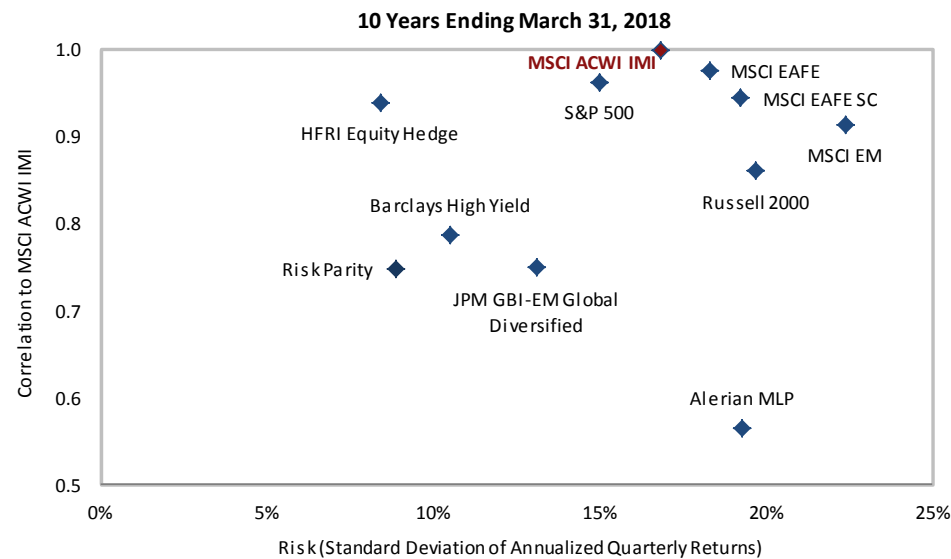

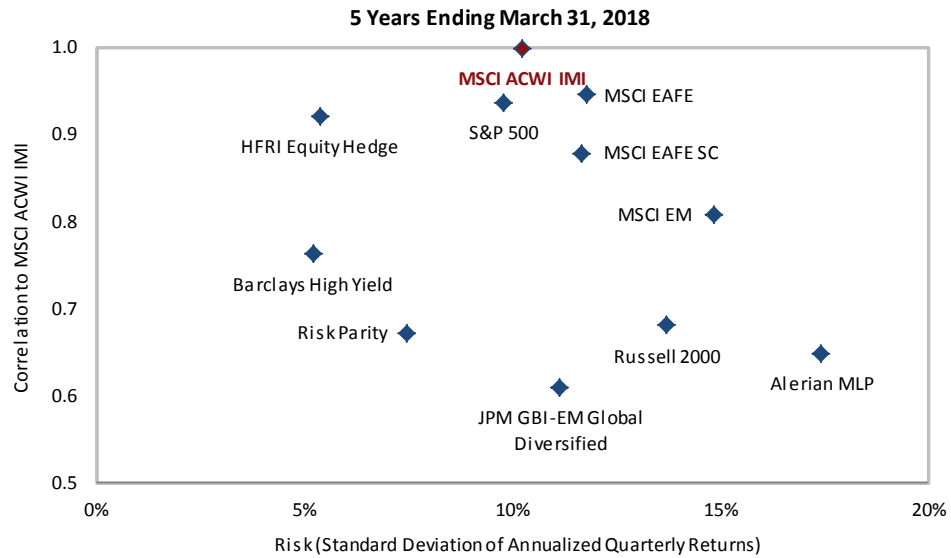

ANNUALIZED ONE-, FIVE-, AND TEN-YEAR RETURNS

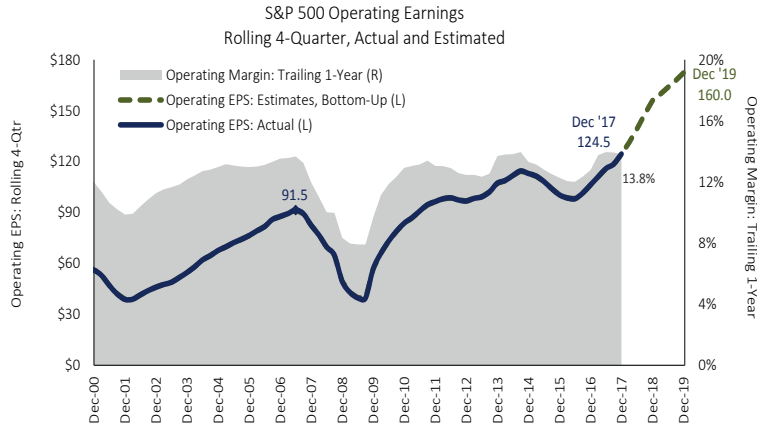

ASSET CLASS RISK/RETURN PERFORMANCE

MARKET CHARTS

Source: Standard & Poor's

Operating margins remain near cyclical highs; analysts maintain a very positive outlook for US earnings.

Source: Institute for Supply Management

Source: International Monetary Fund

Economic growth remains positive, but long-run expectations for future growth are muted in the developed world.

Source: Citigroup, Bloomberg

Economic data releases have exceeded expectations dramatically, consistent with strong economic data in the second half of 2017; an index reading of 0 means data releases have met analyst expectations.

Public Debt

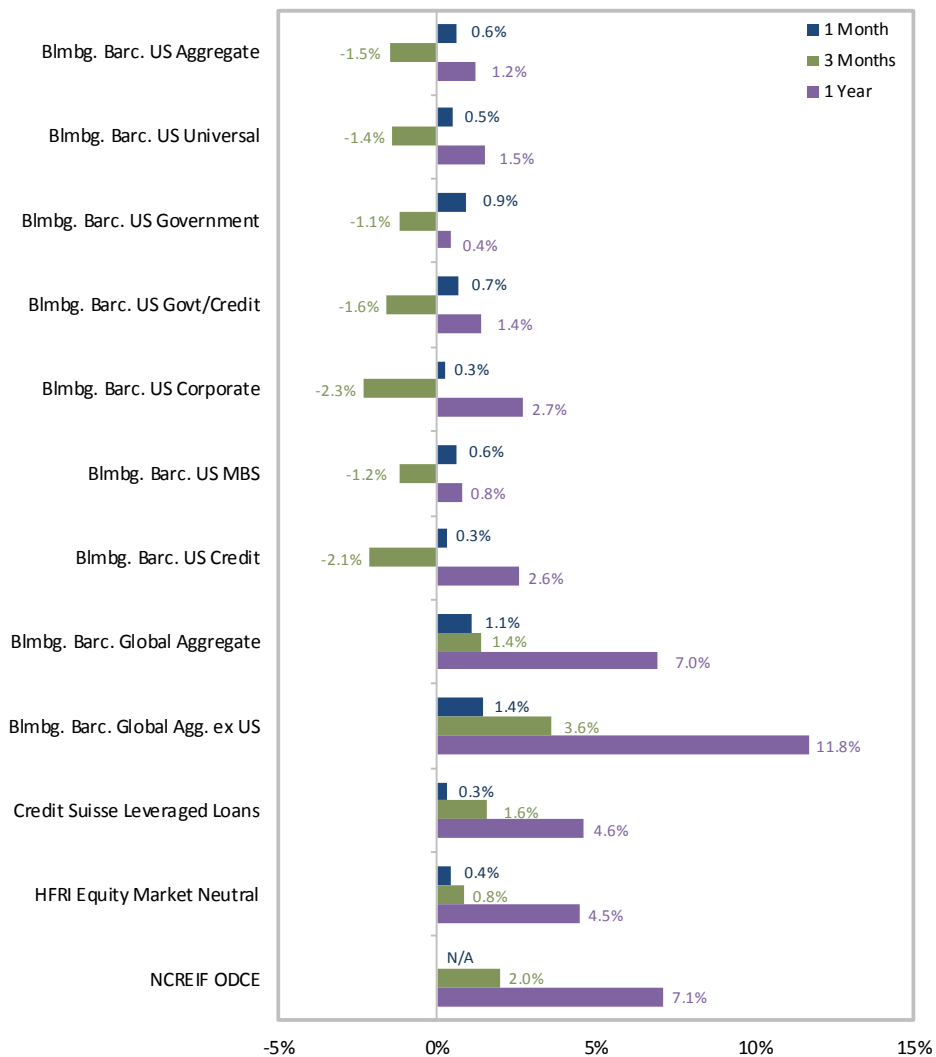

- Fixed income indices broadly declined during the quarter as yields rose across the curve. The Bloomberg Barclays US Aggregate returned -1.5%, and within the index treasuries outperformed credit as spreads widened. The Index yield was 3.1% as of March 31, 40 bps higher for the quarter and reaching its highest month-end level since May 2010.
- International fixed income returned 3.6% for the quarter, with international outperformance over domestic fixed income once again driven by declines in the dollar against foreign currencies. The yield on the Bloomberg Barclays Global Aggregate ex US ended the quarter at 0.79%, up 1 bp from December.
- Public bank loans, as measured by the Credit Suisse Leveraged Loan Index, continued to perform well during the quarter. Bank loans outperformed core fixed income by 310 bps, with bank loans benefiting from their low duration during the period of rising rates. Default rates ticked up during the first quarter but remain relatively low; 2.5% of loans defaulted over the trailing 12 months compared to the 10-year average default rate of 3.1%.

Relative Value Hedge Funds

- Relative value hedge funds gained during the quarter, serving well as a fixed income diversifier. Convertible arbitrage and relative value arbitrage were among the best-performing strategies, each gaining nearly 1%.

Core Real Estate

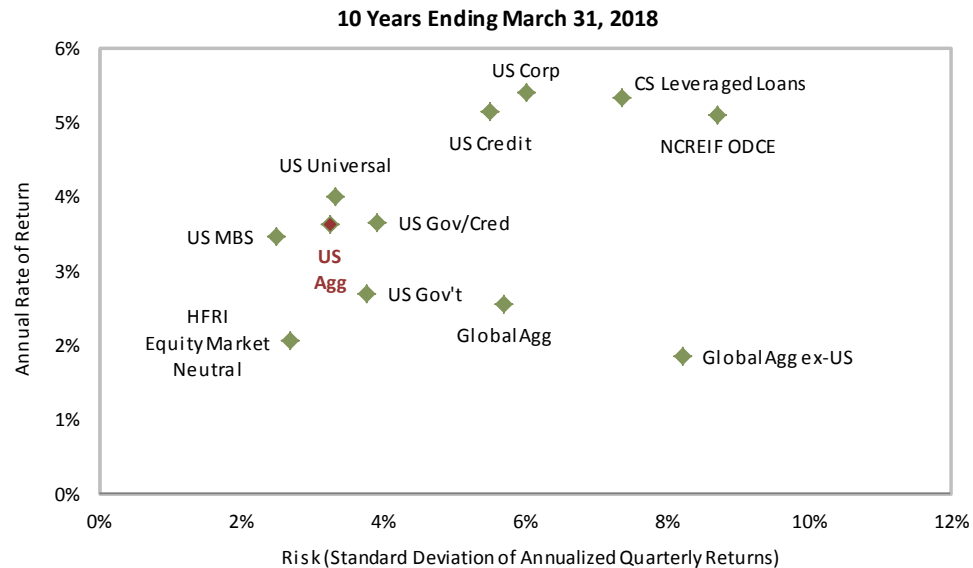

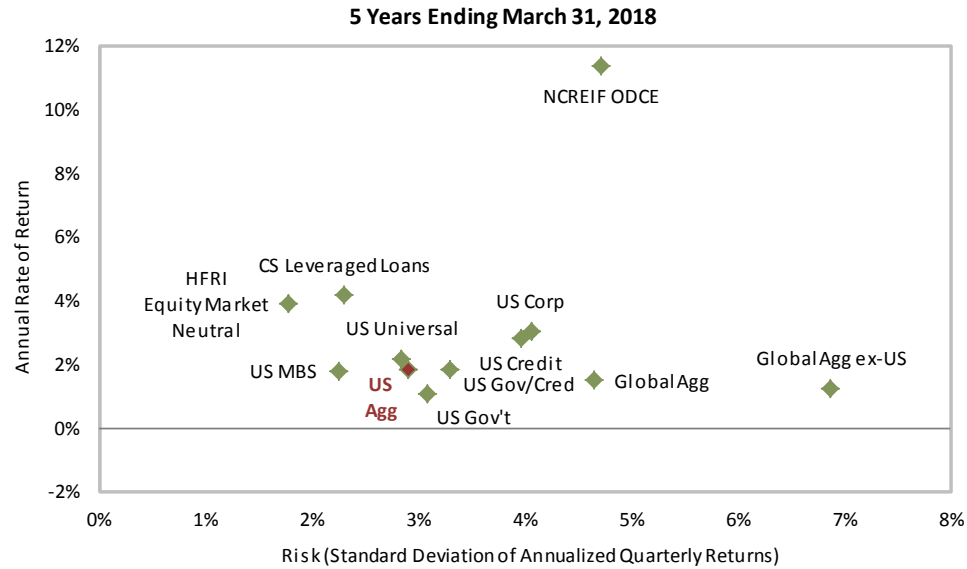

- Core real estate returns for the first quarter were 2.2% gross and 2.0% net, bringing the one-year gain for core funds to 7.1% net. Core real estate gains have moderated from the 11%+ annualized returns of 2013-2015, but limited supply increases and continued strong demand have acted as tailwinds for the market.

Inflation

- TIPS returned -0.8% during the quarter, with gains from rising inflation more than offset by rising real yields. At the end of the first quarter market-implied 10-year breakeven inflation expectations were 2.1%, their highest month-end level since August 2014. TIPS outperformed nominal bonds by 70 bps during the quarter.

Deflation

- Long treasuries rallied during March, yet ended the quarter down 3.3% as yields rose along the long end of the curve. The 30-year Treasury yield was 3.0% on March 31, 30 bps higher quarter-over-quarter. Yields have risen as the Federal Reserve has started to unwind its balance sheet of treasuries and mortgage-backed securities, fiscal stimulus has resulted in increased issuance, and economic growth has increased.
- Cash returns have increased but remain low, with 90-day T-Bills returning 0.3% for the quarter and 1.1% over the past year.

Commodities

- The Bloomberg Commodity Index returned -0.4% during the quarter, with declines primarily driven by industrial metals and livestock. Energy outperformed once again, as WTI crude oil prices rose from \$60/barrel in December to \$65/barrel at the end of March.

Tactical Trading

- Tactical trading strategies saw mixed performance, with global macro strategies gaining while managed futures declined. Losses from managed futures strategies were primarily a result of quickly-shifting trends in February, when the CS Managed Futures Index declined 7%.

Gold prices have risen as the dollar has declined versus foreign currencies.

INVESTMENT THEMES: LOOKING FORWARD

What We Believe

Growth

- Increasing late-cycle indicators for financial markets and economies.
- Equity valuations are high, particularly in the US, while the US is further along in its economic cycle than international economies.
- High levels of uncertainty (central bank, political, economic, etc.) persist, while realized volatility has been relatively low.

Income

- Muted returns for most fixed income assets as yields remain below historical levels; interest rate sensitivity has also increased.
- Credit spreads have compressed despite levels of corporate debt-to-GDP at cyclical highs.

Diversification

- The 'cost' of holding diversifying assets has declined given high equity valuations and low bond yields.

What Investors Should Do

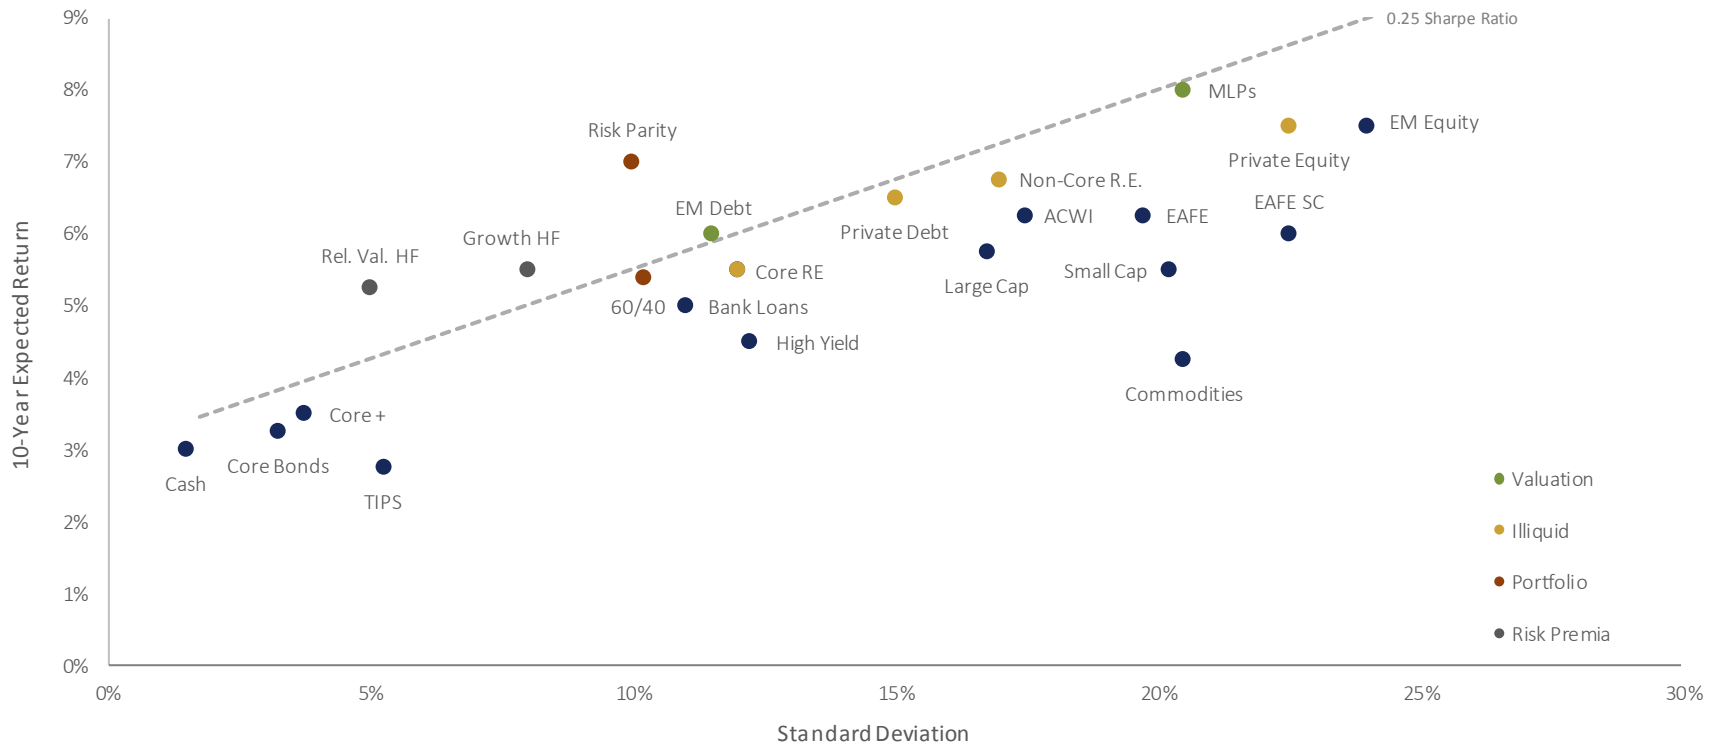

- Maintain rebalancing discipline; strong equity performance has continued to lift equity allocations in portfolios.
- Within equity allocations, continue to tilt towards developed international and emerging markets.
- With lower expected asset class returns going forward, emphasize active management in less efficient markets.
- Favor return sources that diversify away from duration without significant credit risk (i.e., relative value hedge funds, unconstrained fixed income).
 - Size these allocations appropriately given significant tracking error vs. core fixed income.
- Maintain equity diversification and fixed income diversification for portfolio balance and hedging qualities.

SUMMARY

- Each quarter Summit publishes long-term (10-year) strategic capital market assumptions.
- While these assumptions are long-term by definition (one would not expect them to change frequently), there are times when market fundamentals move dramatically, thereby altering the expected performance for certain asset classes.
- For a complete rationale (for all assumptions) please refer to Summit’s annual “Capital Market Assumption” publication (available at www.ssgstl.com).

ASSET CLASS EXPECTED RETURN AND RISK

- Historically broad asset classes have achieved a Sharpe Ratio of roughly 0.25.
- Based on Summit’s Capital Market Assumptions, asset classes or strategies that appear to offer outsized absolute or risk-adjusted returns can be categorized into four main categories:
 1. Valuation: Current prices compared to fundamentals suggest relatively high prospective returns.
 2. Illiquid: Extended lock-up periods allow investors access to premia unavailable in public markets.
 3. Portfolio: Diversification benefits from combining multiple asset classes or strategies into a single portfolio.
 4. Risk Premia: Strategies employ leverage, have the ability to short, and/or are able to access unique risk premia unavailable in public markets.
