

JACKSONVILLE POLICE AND FIRE PENSION FUND  
BOARD OF TRUSTEES MEETING

---

DATE: January 20, 2017

TIME: 9:05 to 10:32 a.m.

PLACE: Jacksonville Police and Fire Pension Fund  
One West Adams Street  
Suite 100  
Jacksonville, Florida 32202

BOARD MEMBERS PRESENT:

Richard Tuten, III, Board Chair  
Richard Patsy, Board Secretary  
William Scheu, Trustee  
Chris Brown, Trustee

STAFF PRESENT:

Timothy Johnson, Executive Director,  
Plan Administrator  
Debbie Manning, Executive Assistant  
Devin Carter, CFO  
Robert Sugarman, Board Counsel  
Jarmon Welch, Actuary (via telephone)  
Pete Strong, GRS (via telephone)  
Dan Holmes, Summit Strategies Group  
(via telephone)

CITY REPRESENTATIVES PRESENT:

Steve Durden, Office of General Counsel  
Anna Brosche, City Council Liaison

Stenographically reported by:  
Denice C. Taylor, FPR

## 1 BOARD MEETING

2 January 20, 2017 9:05 a.m.

3 - - -

4 CHAIRMAN TUTEN: Let's call the meeting to  
5 order. First thing, the pledge of allegiance.6 I pledge allegiance to the flag of the  
7 United States of America, and to the Republic for  
8 which it stands, one nation, under God,  
9 indivisible, with liberty and justice for all.10 If I could keep everybody standing for just  
11 a second. We have a moment of silence for some  
12 deceased members: James Stevenson, firefighter;  
13 Henry Lindsey, police officer; Doyle Hall, police  
14 officer; David Addison, captain, fire department;  
15 and Claude Springs, Jr., retired fire captain.

16 (Pause)

17 CHAIRMAN TUTEN: All right. Thank you,  
18 everybody. You may be seated.19 Public speaking period. We only have one  
20 speaker, a Bill Gassett. Oh, boy. Bill, please  
21 come up. There he is.22 MR. GASSETT: My name is Bill Gassett. My  
23 address is a matter of record.24 Wednesday was quite an interesting day, and  
25 so we felt compelled to prepare Part 6, called

1           Sherlock Holmes. And what we did in page 1, if  
2        you'll look at it real quickly, we did a  
3        side-by-side comparison of the returns of what  
4        the pension fund has done versus an alternative  
5        strategy like the Dow Jones.

6           And so, for example, 1994, the value of the  
7        fund at that time was 427 million. The gain gave  
8        about an \$84-million profit. The Dow Jones had a  
9        higher percent retain. Gave a gain of 151  
10      million. And that far right-hand column shows  
11      the differences throughout the course of that  
12      last 23 years.

13       There were some minuses in there, but the  
14      grand total difference is 377 million. Now, not  
15      being one to allow a chart to exist silently, I  
16      ran through the equivalent discounted cash flows  
17      and found that that would be equivalent to about  
18      a \$1.6-billion plus.

19       So in effect the outstanding unlimited  
20      liability would be reduced at \$280 million had  
21      this been adopted, not the restrictive plan that  
22      you have now. And you would have been in excess  
23      of 80 percent funded.

24       The next page shows an update based on what  
25      the good Mr. Jerome (sic) produced yesterday.

1       This 10 percent number is a gross 10, but net 7.  
2       You need that number to make sure you get people  
3       to age 82 based on the day it was presented  
4       through Mr. Jerome last Wednesday.

5           The problem is, the problem is, that if you  
6       took -- did a sum total of that column from the  
7       policemen's fire and pension fund, that first  
8       yellow, you're only doing about 7 1/2. By  
9       coincidence, the Dow Jones return gave me about a  
10      10 1/2 percent net return.

11          So with your 7 percent still in the works,  
12       it will probably stay there, you're going to run  
13       out of money in about 13 years. That has not  
14       changed, by the way, since the last chart was  
15       presented, about a year ago.

16          Jerome made an extremely -- so as far as  
17       that point, should you pay off the \$42 million at  
18       once or over a period of time, I would suggest at  
19       once because your new requirement is not the 7  
20       percent, but the 10 percent. That's the real  
21       number you've got to make because you have no  
22       money in the future retirees. It's all current  
23       retirees.

24          So with that, every dollar you postpone the  
25       next two or three years, your cost of capital on

1           that carry is 10 percent. You made a good point  
2           last time. What if the market is just flat next  
3           year? Well, that money that year will cost you  
4           20 percent. So you always make the 10, plus the  
5           10 that's coming up next year.

6           Just other, real quickly. Please consider  
7           an alternative strategy. If you're positively  
8           guaranteed locked in, this damnation that I  
9           mentioned last month will continue.

10          It also will mean that you, City  
11         Councilwoman, you guys will have to be on the  
12         hook for an initial \$330 million just to keep  
13         these folks solvent.

14          Now, Jerome made a very important comment.  
15         It's too bad he got cut off too soon. But on  
16         page 1 of what he handed out, he said that he was  
17         able to calculate the 1.8 billion based on you've  
18         got to make 7 percent.

19          If you've got to make 10 percent, and you  
20         can have your guys check this, that number kicks  
21         up to 2.2 billion. That's your true unfunded  
22         liability. So please keep that in mind.

23          Bottom line, please consider sending a  
24         letter. It doesn't cost you anything, and it may  
25         be the one thing that gets the ball rolling to

1 get this thing solved.

2 Any questions? Thanks very much for your  
3 time.

4 CHAIRMAN TUTEN: Thank you, Bill.

5 No more public speakers. We'll move on to  
6 the Consent Agenda. If everyone has perused the  
7 Consent Agenda, any questions, comments,  
8 concerns?

9 (No responses.)

10 CHAIRMAN TUTEN: We'll need a motion and a  
11 second.

12 MR. BROWN: I make a motion to accept the  
13 Consent Agenda.

14 MR. PATSY: Second.

15 CHAIRMAN TUTEN: We have a first and a  
16 second. Any questions?

17 (No responses.)

18 CHAIRMAN TUTEN: All in favor?

19 (Responses of "aye.")

20 CHAIRMAN TUTEN: Any opposed?

21 (No responses.)

22 CHAIRMAN TUTEN: All righty, then.

23 Moving on to Mr. Timothy Johnson.

24 DIRECTOR JOHNSON: Yes. Good morning,  
25 everyone.

1           If you turn to the tab in your book titled  
2       Executive Director's Report, I've got a  
3       relatively brief report for this month. The  
4       first thing you see are the Dashboards. And I  
5       wanted just to remind the members that the  
6       Dashboard does two things for me.

7           It's a cumulative tally of the actions of  
8       this Board. So everything that the Board does  
9       relative to benefit approvals, retirement  
10      approvals, investment actions, are in this  
11      budget -- are in this Dashboard.

12       Additionally, it gives me information  
13      relative to the productivity of my staff. In  
14      other words, there are things that don't come to  
15      this Board for approval that I keep track of as  
16      well, like the operating budget and our public  
17      records requests, as well as our progress on our  
18      records retention project.

19       As you'll see at the top of the second page,  
20      we've added actual pages to those two Dashboards.  
21      So previously with regard to the public records  
22      requests, I was keeping record of the requests  
23      that we received and completed.

24       Now we've actually included pages in that  
25      report. So you can begin to see the volume of

1           the work that's being done. We're doing the same  
2           thing now for records retention so that you can  
3           see the progress that's being made in that regard  
4           too.

5           In terms of updates, there's only two. The  
6           big news is I was directed last month by the  
7           Board to schedule a workshop to discuss the  
8           October 1, 2016 actuarial report. That workshop  
9           occurred just two days ago on Wednesday, and  
10          we'll have an update on that through our actuary,  
11          Jarmon Welch, in a minute.

12          He is on the phone along with Pete Strong  
13          from GRS to answer any questions we might have  
14          relative to the assignment that was given on  
15          Wednesday.

16          Next, a resolution was introduced by the  
17          Board to confirm the appointment of Tracey Devine  
18          as a member of the FIAC, and that has been  
19          submitted to council. I wanted to acknowledge  
20          Councilwoman Brosche for taking her time to walk  
21          me through the appointment process so that we can  
22          hopefully efficiently get Tracey through that  
23          process and get her working on behalf of this  
24          Board on the FIAC. So thank you for your help.

25          And then lastly we've added to the daily

1       updates that you-all receive. We send you a  
2       daily update of the market value of assets. We  
3       added to that a link to *The Morning Pulse*, which  
4       is a daily snapshot of news regarding pensions,  
5       401(k)s, personal finance, technology,  
6       investment, and several other things.

7           I've gotten it for years. And in the past I  
8       would excerpt articles from it included in my  
9       report. So a light went off one day and I said,  
10      instead of taking a handful of articles and  
11      putting it in my report, why don't I just send  
12      this thing to you-all every day. So now you have  
13      access to the same information that I receive,  
14      and those stories are outstanding.

15           If you followed recently, you'll see that  
16      even Jacksonville has been reported in *The*  
17      *Morning Pulse*. So I hope that that's useful to  
18      you, particularly with all the changes that are  
19      going on here in Jacksonville with regard to  
20      negotiation with the union.

21           So with that, I'll entertain any questions  
22      before we move on to the other reports by counsel  
23      and the investment consultant.

24           CHAIRMAN TUTEN: Just one question for you,  
25      Tim.

1 DIRECTOR JOHNSON: Yes.

2 CHAIRMAN TUTEN: On the Dashboard on the  
3 first page right down there with your Benefits.

4 DIRECTOR JOHNSON: Yes.

5 CHAIRMAN TUTEN: Pension Estimates, per  
6 prior month, 30, Year-To-Date, 133. What  
7 number -- what is that number?

8 DIRECTOR JOHNSON: So we routinely will get  
9 requests from members to estimate what their  
10 benefit will be in the future.

11 CHAIRMAN TUTEN: I gotcha.

12 DIRECTOR JOHNSON: Right.

13 MR. BROWN: And the New Medicals? The New  
14 Medicals.

15 DIRECTOR JOHNSON: Right. That's right.  
16 Those are new people that are coming in going  
17 through the medical process --

18 MR. BROWN: Okay. Got it.

19 DIRECTOR JOHNSON: -- to identify any  
20 pre-existing condition before they're approved.

21 I appreciate those questions because I want  
22 you to understand what these things are measuring  
23 as well as I do.

24 CHAIRMAN TUTEN: Gotcha. All right.

25 DIRECTOR JOHNSON: All right. Thank you.

1 CHAIRMAN TUTEN: So I guess we have Counsel  
2 Reports, Steve Durden.

3 MR. DURDEN: Good morning.

4 The two reports I'm bringing from the office  
5 relate to litigation. At this point the two  
6 pieces of litigation -- I'm sure you-all are all  
7 aware of. One is the Curtis Lee case on public  
8 records.

9 I don't know if you recall, but one of the  
10 judges was someone who may have a bit of a -- or  
11 believes might have a conflict, so he recused  
12 himself. And then it took a while for the chief  
13 judge to issue a new order. And the new judge is  
14 going to be -- it was Judge Norton who had the  
15 conflict.

16 I think she may have had -- she may have had  
17 litigation with regard to Mr. Lee at some point  
18 while working for the General Counsel's Office.  
19 I don't remember the exact conflict, but she felt  
20 that it was sufficiently strong enough that if  
21 Mr. Lee asked for it, and he did, that she should  
22 recuse herself. So she did recuse herself.

23 But that wasn't before a couple of motions  
24 had been filed, a motion to dismiss in official  
25 capacity -- don't know if you recall -- each,

1       including myself, a number of us were sued and  
2       each were sued in your, quote, individual  
3       capacity. A motion to dismiss was filed on that.

4           This was a failure to comply with pleading  
5       requirements. It was a motion to dismiss because  
6       the PFPF, as in the fund, is not a separate  
7       entity. The Board of Trustees is an entity, but  
8       there's no entity called the Police and Fire  
9       Pension Fund.

10          And then also there's a motion to strike the  
11       demand for jury trial because there's no jury  
12       trial in a public records case.

13          Because of the recusal, we now have a new  
14       judge and I think it's Judge Soud. I think  
15       that's what -- I think the order just came out --  
16       let's see. I think that's what he told me. You  
17       know, it's not in the report, but I believe  
18       that's correct. Judge Sound is the --  
19       interestingly enough, Judge Soud was a lawyer for  
20       the General Counsel's Office many, many years  
21       ago, but I don't -- there's no reason for that to  
22       be a conflict. That's not going to be  
23       justification for a conflict.

24          So my guess is at some point before too  
25       long, Mr. Payne, Jacob Payne, who is the main

1 litigator, the main litigator in this particular  
2 case, will be asking for hearings on the various  
3 motions so that we can either clean up the case  
4 or get rid of it completely. It's hard to  
5 completely get rid of a case on a motion to  
6 dismiss, but at this point there is that effort.

7 Then the other litigation is, as you may  
8 know, the John Keane litigation. The Board was  
9 officially served -- I think I saw the date of  
10 the 5th or the 6th, or something along those  
11 lines, of January.

12 An answer is due on -- is next week, the  
13 26th. And I believe that Ms. French may be  
14 asking for an extension. She didn't tell me  
15 that. That's not official yet, but that's -- the  
16 lead lawyer in that case will be Loree French,  
17 again, with Jacob Payne assisting. Rita Mairs  
18 will also be working on that case. The two lead  
19 lawyers will be Mairs and French. And certainly,  
20 if you have questions, please don't hesitate to  
21 call them.

22 Jacob Payne, I believe, is probably working  
23 on the first response to the litigation.

24 CHAIRMAN TUTEN: All righty. Anybody have  
25 any questions?

1 (No responses.)

2 CHAIRMAN TUTEN: Thank you, Stephen.

3                   MR. SUGARMAN: We've got a verbal report, if  
4 you would like.

5 CHAIRMAN TUTEN: Yes.

6                   MR. SUGARMAN: First, thank you-all for  
7                   engaging us. It's something we've really looked  
8                   forward to. It's challenging. A lot of the  
9                   issues here are novel, and I'm really enjoying  
10                  the time I'm spending almost every day on issues  
11                  that are coming up.

12 | (Laughter)

13 DIRECTOR JOHNSON: I wish that weren't true,  
14 but it is.

15                   MR. SUGARMAN: The transition from  
16                   Bob Klausner's office to ours is running  
17                   smoothly. He's answering my questions, giving me  
18                   any documents I need, as I knew he would.

19 And the transition of the division of  
20 responsibilities, which previously all were with  
21 Bob Klausner and now are divided between OGC and  
22 me, is also going very well. And we're working  
23 very well together as I'm learning and talking to  
24 all the different staff.

25 So in some of the things you've heard about,

1           for example, the Keane case, we took a look at  
2           it. We had a phone conference with Loree French  
3           and Rita, gave them some ideas, sent them some  
4           cases. And basically we're on standby whenever  
5           they -- whenever they need us. Give them some  
6           things to think about. But we are working as a  
7           team on that.

8           The opinion on the DROP payouts, whether or  
9           not they comply with the Internal Revenue Code  
10          and comply with your code, we have completed our  
11          work on that. We had our first conference with  
12          the OGC yesterday, because they're dealing the a  
13          similar issue on behalf of one of their clients,  
14          and we should expect to have an opinion, both  
15          saying the same thing, within the next week or  
16          two. So that's still in the works.

17          The Keane case I mentioned.

18          So we're off and running. Things are going  
19          very well. I want to thank Tim and Deb for  
20          making that transition for us, introducing us to  
21          who we call and how we get in on meetings  
22          telephonically. You have a really good staff  
23          working here. Whatever we need, we get in a  
24          matter of minutes. Thanks.

25          CHAIRMAN TUTEN: All righty. Are we going

1 to get Dan on the phone, Tim?

2 MS. MANNING: Dan is calling in at 9:30. So  
3 maybe give him another minute.

4 Dan, are you on the line?

5 CHAIRMAN TUTEN: Well, do you want to skip  
6 and fast-forward to something else?

7 DIRECTOR JOHNSON: We can skip that and we  
8 can go to Old Business, I guess.

9 CHAIRMAN TUTEN: Well, how about -- is Old  
10 Business, is that Jarmon?

11 DIRECTOR JOHNSON: That is Jarmon. Jarmon  
12 is on the line.

13 MS. MANNING: Jarmon and Pete Strong are on  
14 the line.

15 DIRECTOR JOHNSON: Through the Chair,  
16 Jarmon, can you hear me? It's Tim.

17 MR. WELCH: Yes, Tim, I can hear you.  
18 Hello, everyone.

19 DIRECTOR JOHNSON: You know, I should  
20 acknowledge Deb as well. She and the staff, they  
21 did a great job. Those who were here on  
22 Wednesday know how difficult the phone was when  
23 Bob was on the line. It was a mess.

24 So they worked and were able to get this  
25 state-of-the-art conference line and we can hear

1 perfectly. So this is great.

2 Jarmon, everybody can hear you just fine.

3 The draft letter that you were directed to  
4 write on behalf of the Board to be sent to the  
5 state justifying a step-down from the 2.5 assumed  
6 payroll growth rate down to the rolling ten-year  
7 average of 0.067, that was sent to the members of  
8 the Board when you sent it to me.

9 They have had a day or so to review that,  
10 and I thought this would be a great opportunity,  
11 if you would, to just elaborate on that letter  
12 and entertain any questions that the Board  
13 members might have to you.

14 MR. WELCH: Okay. All right.

15 In the letter I make three arguments for the  
16 state to allow the three-year staggering.

17 The first argument, number one in it, is  
18 that it's consistent with past practice to do the  
19 three-year staggering because you can see how  
20 past practice has been to stagger the 2008  
21 payroll growth assumption of 5.25 percent down to  
22 4 1/2, 3.25, and then to 2.5.

23 So actuaries like to be level and consistent  
24 and regular systematic in their recommendations  
25 rather than have a big jolt at one time. And so

1       the consistency is preserved by not going  
2       immediately from 3.25 to zero in the 10/1/16  
3       valuation, but to put it in over several years.

4           So the state called me and we discussed  
5       this, and I've sent them some information that  
6       was already public on the website.

7           The second argument and the main argument --  
8       the main argument is that the state's job is to  
9       make sure the minimum annual required  
10      contribution is paid into the fund. If they  
11      don't do that, well, then you get into trouble  
12      with it.

13           So the second argument is that, with  
14      staggering, they're still getting amounts above  
15      the minimum required contribution. Or to put it  
16      another way, I'm saying to them, you look at the  
17      total package, and the total package now includes  
18      the supplemental contributions, so give us a  
19      break with the annual required contribution. Let  
20      us set it at the staggered level.

21           And to me, that's -- that's a powerful  
22      argument because you probably -- it puts them  
23      in -- it would ease the difficulty for them too  
24      in terms of approving it because when they --  
25      when they approve certain liberalizations or

1 lower funding, they're afraid of making policy  
2 for the 400-and-something plans all across the  
3 state. They don't want to open a can of worms.

4 But I pointed out to them that you are a  
5 unique situation, which they really agreed with  
6 that. But that's the fact that you have this  
7 supplemental contribution in this plan and  
8 probably nobody else does.

9 So I say you're there to preserve this  
10 minimum contribution level and you got it. And  
11 so you've got a total package that's good. So  
12 approve what we're requesting.

13 Now, the third argument was that -- which is  
14 what they would have basically thought I was  
15 going to write about, this argument of trying to  
16 show that going forward there will be payroll  
17 increases.

18 And so I referred them to the actuarial  
19 report, the key data pages that show that the  
20 DROP -- the number of DROPS in the last five  
21 years has went down, and there's a number of new  
22 hires. There were a couple of hundred people  
23 that were hired over the past year.

24 And then also I mentioned to them that the  
25 mayor proposed a 20 percent pay increase over

1           three years, which may or may not come to be.

2           So I said -- so in your usual argument where  
3       you ask that, regardless of anything else, if  
4       you're going to have a payroll increase  
5       assumption, you expect to see payroll increase.  
6       I said, that's probably going to happen too,  
7       although it won't happen immediately, but it will  
8       happen over a period.

9           So I left it there. I talked to Doug and I  
10      talked to his boss, Keith, on the phone. They  
11      called me after I sent them a note that we needed  
12      quick action here.

13       And I said, don't go forward with the  
14      thought that you-all had, that between now and  
15      the middle of the summer, that a review would be  
16      done actuarially and you would then review it  
17      internally and then you would come back.

18       I said, there's a need in Jacksonville to  
19      have a prompt answer. And I said, the issue is  
20      pretty clear in the letter that I'm -- I'm  
21      discussing with the Board to send you, and could  
22      you please just get back in a few weeks and tell  
23      us if it's okay with you.

24       I'm encouraged that they will come back and  
25      say the staggering is okay. They may not do it

1           in several weeks. It may take a bit longer,  
2 because when you deal with the state, if you  
3 bring up an issue, for example, like one time I  
4 called them and said, let's count DROP pay in the  
5 payroll increase assumption because we -- that  
6 helps us. It's also real pay. They immediately  
7 said no, that in their rules they would not allow  
8 it.

9           But when I suggested this, they didn't  
10 immediately say no, and they said, we'll take it  
11 under advisement and we'll get back to you. And  
12 so I think you're in a good position. They  
13 probably will approve the staggering.

14           DIRECTOR JOHNSON: Thank you, Jarmon.

15           Through the Chairman, if the response from  
16 Tallahassee, the Division of Retirement, is to  
17 allow the step-down of the payroll growth rate,  
18 then what will we do with that information once  
19 they tell us that it's okay and that they're  
20 accepting your recommendation?

21           CHAIRMAN TUTEN: As far as -- you're talking  
22 about Jarmon?

23           DIRECTOR JOHNSON: I'm talking about Jarmon,  
24 yes.

25           Jarmon, did you hear that question?

1                   MR. WELCH: Yes, yes.

2                   Here's the way -- here's the way the  
3                   department works. Hopefully in a few weeks they  
4                   will write back and say the staggered  
5                   suggestion and the actuarial letter of such and  
6                   such is acceptable to the department.

7                   Then I would write back and I would say that  
8                   this means the budget is reduced from 203  
9                   million -- it's reduced by 25 million to 177  
10                  million. And I would copy both the Trustees and  
11                  the state on that. And then that's it.

12                  I mean, when Joey is doing his budgeting and  
13                  truing up the amount for the year for fiscal year  
14                  '18, that's what he would use. And when the  
15                  state, at the point in time, they were reviewing  
16                  the reports, they would have that and they would  
17                  use it.

18                  There's no need -- I mean, I'm requesting  
19                  the actuary report be adopted as it is. Changes  
20                  in it are handled by side letters like this, and  
21                  they go in the state's file and your file so  
22                  everybody knows where you end up.

23                  DIRECTOR JOHNSON: Thank you, Jarmon.

24                  CHAIRMAN TUTEN: So in other words, once the  
25                  state -- if the states comes back and says, yeah,

1       you guys, this looks good to us, you can approve  
2       it, let's go with it, really, the only thing left  
3       for us to do would be to approve the changes to  
4       the actuarial report as far as from the original  
5       2016 with the 44 million, and then --

6            MR. WELCH: The acceptance of the state --  
7       of the letter, the acceptance of the 177 million  
8       that --

9            CHAIRMAN TUTEN: So we have to send it back  
10      to the state to get their approval?

11          MR. WELCH: Yes.

12          CHAIRMAN TUTEN: Yeah. That's what we would  
13      do, correct? I mean, that's all we'd have to do.  
14      Once the state approves this, we vote here what  
15      we want to do, whether or not we want to pay it  
16      all at once or do three at a time and then we're  
17      done.

18          MR. SUGARMAN: Yes. You're approving, in  
19      essence, a revised report, would be the report as  
20      revised by this letter, or the impact statement  
21      or whatever it is, however form Jarmon is going  
22      to give it to us, and that would be sent to the  
23      state.

24          MR. BROWN: But it's not revised yet because  
25      it hasn't been approved by the state, right?

1                   MR. SUGARMAN: That's right. The steps now  
2                   are we're awaiting the approval of the phase-in  
3                   by the state, and then if they approve it, then  
4                   it goes to you, and Jarmon -- if Jarmon  
5                   recommends it, which I'm sure he will, and then  
6                   you approve the actuarial valuation as revised.  
7                   Then that goes to the state for approval and that  
8                   goes to the city as its pension bill for next  
9                   year.

10 | MR. BROWN: Okay.

11                   MR. SCHEU: So procedurally we're approving  
12                   it -- because I thought what we did was approve  
13                   it as revised, subject to revision if the state  
14                   didn't approve it.

15                   MR. BROWN: See, I thought we were going to  
16                   be approving it subject to the approval of the  
17                   state, like a conditional approval, if that's  
18                   even appropriate.

19                   MR. SCHEU: And it would be -- it would  
20                   revert to the original if the state didn't  
21                   approve it. That's what I thought.

22 | MR. BROWN: Yeah.

23                   MR. SCHEU: And then we wouldn't need to  
24                   come back.

25 MR. BROWN: That's right. Can we do that?

1           Can we take care of all the voting now and then,  
2           subject to what happens at the state level if  
3           they approve it, then obviously these changes go  
4           into effect. If they don't approve it, then it  
5           reverts back to the original report?

6           DIRECTOR JOHNSON: Well, we're framing the  
7           motion, so let's see.

8           Bob, do you want to comment on that?

9           MR. BROWN: Bob, do you have any issue with  
10          that?

11          MR. SCHEU: Bob, that would be a question  
12          for you.

13          MR. SUGARMAN: I would rather have you  
14          approve the report as presented with the -- but  
15          subject to revision due to subsequent events that  
16          might arise.

17          Collective bargaining might be completed.  
18          That might loosen up some surtax money. That's  
19          one subsequent event. This state approval is  
20          another one.

21          So we'll approve it subject to revision, if  
22          necessary -- if needed due to subsequent events.

23          MR. SCHEU: And we would vote on that at  
24          that point?

25          MR. SUGARMAN: Right. You'd vote on it

1 today and then you'd vote on the subsequent  
2 events, on the revisions caused by the subsequent  
3 events.

4 MR. SCHEU: Sure. Okay.

5 MR. SUGARMAN: It's only the January 31st  
6 deadline that's causing us to have to look at  
7 this right now. Normally we'd wait --

8 MR. BROWN: Right, sure.

9 MR. SUGARMAN: -- and see how those things  
10 play out and talk about this in April or May.

11 MR. SCHEU: And we should convey to  
12 Councilwoman Brosche, as you've heard, that for  
13 your committee, that we're hoping that this will  
14 come about. We still have to vote on it, but  
15 that looks like we will.

16 MR. BROWN: Right.

17 MS. BROSCHÉ: Thank you.

18 MR. SCHEU: As you can do your plan.

19 MR. CARTER: Through the Chair, we already  
20 communicated to the council auditor's office and  
21 the city about the report itself.

22 So, of course, like Mr. Sugarman stated,  
23 it's the fact that we approve it today due to --  
24 based upon our call from the state, they're okay  
25 with that.

1           So we already have that covered so they  
2 understand, given the fact that we're in  
3 negotiations with the actuary report and whatnot,  
4 so there may be some changes, but they are aware  
5 of the January 31st deadline.

6           CHAIRMAN TUTEN: So the first motion we need  
7 is to send this to the state as it is, correct?  
8 That's what we're doing right now?

9           DIRECTOR JOHNSON: I would just like to get  
10 clarification from Bob whether Bob is saying we  
11 have two motions: One, to accept the report; the  
12 other to send the letter, or whether we're  
13 motioning to approve the report, which includes  
14 the letter.

15           MR. SUGARMAN: The letter is just -- the  
16 letter is not a revision to the report. The  
17 letter is just something that's happening.

18           MR. SCHEU: Could I suggest a motion that we  
19 approval the report as submitted, subject to  
20 revision, based on the response of the state to  
21 that letter --

22           MR. SUGARMAN: Yeah, and other subsequent  
23 events.

24           MR. SCHEU: And other subsequent events.

25           MR. BROWN: And I'll second that motion.

1           CHAIRMAN TUTEN: That would include this  
2 sending to the state? And that would include  
3 accepting the three --

4           MR. SCHEU: No, I think we're not voting on  
5 that yet, because we would come back and have to  
6 vote on that.

7           MR. BROWN: Yes.

8           CHAIRMAN TUTEN: Okay.

9           MR. BROWN: Counsel is recommending for us  
10 to do it in a two-step process.

11          CHAIRMAN TUTEN: That's fine. All right.

12          We have a motion for the first  
13 recommendation, this recommendation to accept it.

14          MR. SCHEU: Yes, subject to possible  
15 revision based on the letter and subsequent  
16 events.

17          CHAIRMAN TUTEN: Right.

18          We've made a motion and a second to send  
19 this to the state, as Mr. Sugarman described.

20          MR. SCHEU: To approve the report, subject  
21 to subsequent events.

22          CHAIRMAN TUTEN: Okay. Any questions?

23          MR. PATSY: I just want to make sure I'm  
24 clear that what we're adopting today is what was  
25 presented with no changes Wednesday. Was it

1           Wednesday? Two days ago.

2           Is that correct, Jarmon?

3           MR. WELCH: Yes, that's true.

4           MR. PATSY: Okay. So subject to revisions  
5           based on feedback from the state.

6           MR. SUGARMAN: Right. If the state says no  
7           and no collective bargaining agreement is  
8           reached, then this is -- this is the report.

9           MR. BROWN: Right. Okay.

10          MR. SUGARMAN: If any of those things  
11          happen, then that's reported to you and the  
12          actuary will say, this warrants a revision in the  
13          report, we'll show you the revision, and then  
14          that's what you'll adopt.

15          CHAIRMAN TUTEN: And then at that point  
16          we'll decide whether or not we want to continue  
17          with the three payments spread out or decide to  
18          say, okay, regardless of all this, we're going  
19          to vote for it.

20          MR. BROWN: Right.

21          MR. SCHEU: That's right.

22          CHAIRMAN TUTEN: Okay. We had a question.  
23          Any other further questions or comments?

24          (No responses.)

25          CHAIRMAN TUTEN: All in favor?

1                   (Responses of "aye.")

2                   CHAIRMAN TUTEN: Any opposed?

3                   (No responses.)

4                   CHAIRMAN TUTEN: None.

5                   MR. BROWN: And I'd like to make a motion  
6                   that what we just did with the stated conditions  
7                   be drafted in a very short letter to the mayor  
8                   and his staff, explaining what we're doing  
9                   because there's no representative from the city  
10                  here. So in order to inform them, I think just a  
11                  very short letter.

12                  I'm making a motion that we draft that and  
13                  sent it to the mayor.

14                  MR. SCHEU: I'll second it.

15                  MR. PATSY: I'll second it too.

16                  MR. BROWN: We're piling on that one.

17                  MR. SCHEU: I would like to suggest that  
18                  Mr. Sugarman participate in the drafting of that  
19                  letter.

20                  MR. SUGARMAN: Tim and I will work together  
21                  on it.

22                  MR. BROWN: Good.

23                  MR. SUGARMAN: But first, the letter will  
24                  begin, in order to meet the January 31st  
25                  deadline, this is what we've done.

1 CHAIRMAN TUTEN: Okay.

2 MR. SCHEU: I'd just like to thank Jarmon  
3 for all his work on our behalf --

4 MR. BROWN: Yes.

5 MR. SCHEU: -- and particularly his patience  
6 and his understanding with respect to this.

7 MR. WELCH: Thank you.

8 MR. BROWN: Thank you.

9 CHAIRMAN TUTEN: All righty. We have a  
10 motion and a second to send a letter to the mayor  
11 and other city representatives explaining exactly  
12 what we're doing here.

13 Any questions, comments?

14 (No responses.)

15 CHAIRMAN TUTEN: All in favor?

16 (Responses of "aye.")

17 CHAIRMAN TUTEN: Any opposed?

18 (No responses.)

19 CHAIRMAN TUTEN: No. All righty.

20 DIRECTOR JOHNSON: Very good.

21 CHAIRMAN TUTEN: Is that it for Old  
22 Business, Director?

23 DIRECTOR JOHNSON: Yes, sir.

24 CHAIRMAN TUTEN: Do we have Dan on the line  
25 yet for the investment?

1 MR. HOLMES: I am online.

2 MR. WELCH: Okay. I'll leave now. Thank  
3 you-all.

4 MR. BROWN: Thank you.

5 DIRECTOR JOHNSON: Thank you, Jarmon.

6 MR. STRONG: Pete, I'm going to sign off  
7 too. This is Pete Strong.

8 MS. MANNING: Thanks, Pete.

9 All right. So, Dan, we have you on the  
10 line?

11 MR. HOLMES: I am. Can you hear me okay?

12 MS. MANNING: Yes, sir.

13 MR. HOLMES: Fantastic. And I can hear you  
14 as well.

15 DIRECTOR JOHNSON: Hey, Dan, this morning.  
16 We wanted to express our condolence at the loss  
17 of your father. We know how difficult that can  
18 be, particularly after the holidays. And, you  
19 know, our hearts and our feelings are with you  
20 during this difficult time. So thank you for  
21 being here today.

22 MR. HOLMES: Well, I would like to say thank  
23 you for -- Tim, to you, the staff, the members of  
24 the FIAC and the Board members. I appreciate  
25 your condolences and the warm thoughts that you

1 expressed, the support you gave me and a little  
2 bit of time to kind of get back on my feet.

3 It was not the holiday season we had  
4 planned, but we're blessed to have him as a  
5 father for so long, and for my mother and my  
6 father to be married for 64 years. So I really  
7 appreciate your patience, and I think it reflects  
8 on the class of your organization.

9 DIRECTOR JOHNSON: Thank you, Dan.

10 CHAIRMAN TUTEN: You're welcome.

11 MR. HOLMES: So am I free to kind of jump  
12 into the agenda?

13 DIRECTOR JOHNSON: Yes, sir.

14 MR. HOLMES: Okay. Thank you.

15 The first topic we have is the Monthly  
16 Capital Market and Economic Update.

17 What's interesting is, is December kind of  
18 got wrapped up into everything that was kind of  
19 thought of as kind of post-election.

20 Interestingly enough, December was pretty quiet  
21 compared to November.

22 The most important thing that happened  
23 during the month of December was basically the  
24 fed came through with its anticipated rate hike.  
25 And so that was important. They raised the range

1 by 25 basis points for fed funds rate, from 50 to  
2 75 basis points, is that range.

3 The second thing that it did was the fed  
4 signaled three additional rate hikes were  
5 anticipated for this year, for 2017. They  
6 believe that rates would get up to about 1.4  
7 percent -- or another 1.4 percent.

8 What's interesting is over the past at least  
9 five years, the fed has always been way out in  
10 front of the market. The market has had  
11 discounted interest rates and growth rates  
12 compared to what the fed was projecting, and now  
13 it might be the reverse.

14 The fed may actually -- or be out in front  
15 of the market and the market may have to wind up  
16 catching up to the fed.

17 So the bottom line is some generally raising  
18 interest rates with a little bit of inflation is  
19 not a bad thing, especially for capital market  
20 assumptions.

21 So with that said, the market -- the bond  
22 market did not react. Actually, the broad bond  
23 market was really up 10 basis points, a positive  
24 return, for the month. Most of the damage from  
25 rising interest rates came on the anticipation

1           that happened during the month of November.

2           Jobs were created during the month. There  
3           was a little bit of a tick up in unemployment to  
4           4.7 percent, but basically we're seeing  
5           strengthening in the job market and the wage  
6           market, and that's allowing the fed to raise  
7           rates.

8           The other bit of positive good news for the  
9           month, real GDP was revised up to 3.5 percent for  
10          the quarter. So that's the strongest quarter  
11          during 2016. We don't have a print for the  
12          fourth quarter yet, but the hope is, is that the  
13          average will come in for the year over 2 percent.

14          And then, finally, leading indicators  
15          continue to show that the economy is in an  
16          expansionary mode. The ISM, nonmanufacturing  
17          index, reached or tied its record high, which  
18          basically just continues to show the market is  
19          growing -- or the economy, rather, is growing.

20          So for equities, that translated into  
21          generally positive return. For the month of  
22          December, the S&P was up over 2 percent. But,  
23          more importantly, for the year domestic equities  
24          were up fairly strongly. The large cap stocks  
25          measured by the S&P, up over 12 percent.

1           Small cap stocks measured by the Russell  
2         2000, up 2.8 percent for the month and over 21  
3         percent for the calendar year.

4           Another bit of good news was the  
5         international equity markets rebounded. You'll  
6         recall they were down in November after the  
7         election on anticipation of a higher dollar and  
8         more domestic-oriented trade policies. So they  
9         traded off, especially emerging markets. But the  
10       bottom line is they rebounded during the month of  
11       December.

12       So we saw EAFE up 3.4 percent, but only  
13       really up 1 percent for the year. However, the  
14       bigger story in international was emerging  
15       markets, they were up about 20 basis points for  
16       the month, but up over 11 percent for the year.

17       And, finally, the other turn around from --  
18       compared to 2015 was oil, and then the kind of  
19       offset of that, the MLP index.

20       And so we saw the MLP index up fairly  
21       strongly in the past couple of months. It was up  
22       4.4 percent alone during the month of December.  
23       And then, more importantly, for the calendar year  
24       up over 18 percent.

25       So by and large growth assets had a good --

1 a good quarter and a good year.

2 On the fixed income side, as I mentioned  
3 before, with the anticipation of the rate hike,  
4 we saw interest rates move up and bottom prices  
5 move down during the month of -- really, the  
6 months of October and December.

7 But the bottom line, it was basically flat  
8 for the -- flat for the month, and then modestly  
9 positive for the year. The Barclays Aggregate  
10 Index was up about 2.6 percent for the year.

11 We liquidated the bank debt portfolio at the  
12 end of the year in order to fund Neuberger  
13 Berman, but we got the majority of that run-up in  
14 that part of the market. It was up about 9  
15 percent for the year. So we captured that gain  
16 before we funded -- we funded Neuberger Berman.

17 So that kind of did as the backdrop. Let me  
18 see if there's any questions.

19 DIRECTOR JOHNSON: No, Dan. Thank you very  
20 much.

21 MR. HOLMES: Thank you.

22 Moving on to the Flash Report. The second  
23 agenda item is the Flash Report. I'll remind  
24 everyone that this is a preliminary Flash Report.

25 As you no doubt have seen in pre-review we

1       don't have all of the benchmarks yet, and we want  
2       to make sure that we've got fully audited  
3       statements. So the final numbers will be  
4       reflected in next month's quarterly report.

5           But on a preliminary basis, the news is as  
6       follows:

7           First of all, at the end of the year, the  
8       total fund market value was 1,761,000,000 and  
9       change from there. That reflects not only the  
10      city's contribution, but also a gain for the --  
11      for the quarter of over 1 percent. So not too  
12      bad on the year either. So that's the market  
13      value.

14           You can see relative -- asset allocation  
15       relative to targets above that. That's on the  
16       top, left-hand side of page 1. So the overweight  
17       in domestic equity, which helped in the course of  
18       the year, remained.

19           The underweight to fixed income we continue  
20       to work on. And then international was a slight  
21       underweight as well, but that was also additive  
22       to performance on a relative basis for the year.

23           CHAIRMAN TUTEN: Dan --

24           MR. HOLMES: Turning to page 2, you can see  
25       performance --

1           MR. BROWN: Hey, Dan?

2           MR. HOLMES: Yes.

3           CHAIRMAN TUTEN: Hey, buddy, this is Rich.

4           Do me a favor. When you're discussing the  
5           manager returns, skip ahead to net-of-fees  
6           returns.

7           MR. HOLMES: No problem. Do you want me to  
8           do the same for the asset class as well?

9           CHAIRMAN TUTEN: Yeah. That would be great.

10          MR. HOLMES: Okay. Then I'll direct your  
11          attention to page 5 then.

12          Okay. So this is the start of the  
13          net-of-fees section. The total fund composite  
14          for the quarter, which also coincides with your  
15          fiscal year, was up over 1 percent and above the  
16          policy index on a net-of-fees basis.

17          On the calendar years basis, the total fund  
18          composite was up 8 percent and a little behind  
19          the policy index.

20          Where returns came from from the calendar  
21          year are as follows:

22          First of all, the highest performing asset  
23          class for the fiscal -- I'm sorry, for the  
24          calendar year was MLPs. You can see MLPs in the  
25          portfolio up over 17 percent. Your composite was

1 below that by about 4 percent. The reason why is  
2 your two managers invested a portion of the MLP  
3 market which is -- tends to be more yield  
4 oriented, a little less volatile and higher  
5 quality.

6 So the lower quality stuff is the stuff that  
7 ran, especially at the beginning of the year,  
8 with the rebounded oil. Those are the MLPs that  
9 are closer to the pipeline, the closer to  
10 exploration. They tend to have a lot more down  
11 on the balance sheet, et cetera.

12 We, at this -- this is reflective of the  
13 manager's style as opposed to being viewed as  
14 something wrong with their -- with their  
15 particular process. We don't have any worries  
16 about that. But above everything else, that  
17 asset class contributed 17 percent towards the  
18 return on a net basis. Again, on a net basis --

19 MR. PATSY: Hey, Dan --

20 MR. HOLMES: -- since inception, both  
21 managers have outperformed the benchmark.

22 MR. PATSY: Hey, Dan --

23 MR. HOLMES: The second biggest contributor  
24 was --

25 MR. BROWN: Dan.

1 MR. HOLMES: Yes.

2 MR. PATSY: Hey, Dan, this is Rick. The  
3 rationale on the MLP managers for that  
4 positioning, that tends to be the higher quality  
5 segment of the market. Is that accurate?

6 MR. HOLMES: Yes.

7 MR. PATSY: Okay.

8 CHAIRMAN TUTEN: Thanks, Dan. Continue.

9 MR. HOLMES: So just to make sure I'm in --  
10 I understand what you're saying, the higher  
11 quality -- the higher quality -- or the fact that  
12 your portfolio has the higher quality MLPs is the  
13 cause for the underperformance.

14 MR. PATSY: Okay. That's good.

15 MR. HOLMES: Okay. In the long term, I  
16 think that's the place to be, or we think that's  
17 the place to be.

18 MR. PATSY: From a capital preservation  
19 perspective, they're less susceptible to --

20 MR. HOLMES: From a risk-return perspective  
21 as well. We think that you get the -- over the  
22 market cycle, that part of the MLP market tends  
23 to get the majority of the upside with less  
24 downside.

25 MR. PATSY: Got it. Okay. Good.

1                   MR. HOLMES: Okay.

2                   The second part of the portfolio that added  
3                   during the calendar year was the domestic equity  
4                   portfolio.

5                   Domestic equity portfolio was up over 10  
6                   percent, 10.6 percent. It too underperformed the  
7                   index a bit during the course of the calendar  
8                   year. It -- we've talked about some of the  
9                   managers in the past.

10                  The FIAC and I are still working on the plan  
11                  of rectifying that. Suffice it to say it's going  
12                  to be going more towards heavier passive weight.  
13                  We're working on the implementation of that. And  
14                  that's due primarily to valuation in the market,  
15                  which we'll touch on here after the Flash Report.

16                  In the international portfolio, the  
17                  international portfolio was up -- I'm sorry.  
18                  Strike that.

19                  The next best performing sector was the real  
20                  estate portfolio. Real estate was up about 8  
21                  percent last year. The managers there  
22                  outperformed the benchmark during the course of  
23                  the year. But please note that that benchmark --  
24                  that's on a preliminary basis. The benchmark  
25                  still needs updating.

1           And so -- but the bottom line is both  
2        managers were north of 8 percent on a gross  
3        basis, about 8 percent on a net basis, and  
4        keeping with their peers, or at least the ones  
5        that I've seen thus far.

6           The next best performing asset class was  
7        international equity. International equity was  
8        up over 4 1/2 percent last year, just slightly  
9        below the benchmark for the year by about 37  
10      basis points. That was basically on a fee basis.

11         Silchester continues to do well. The  
12      managers all continue to -- actually, all the  
13      managers on a gross basis outperformed for the  
14      calendar year.

15         The leading -- the big help there was the  
16      exposure to emerging markets. The emerging  
17      markets manager was up over 11 percent followed  
18      by Silchester. Silchester continues to perform  
19      amazingly well, especially in terms of their  
20      consistency, and they were up over 6 percent.

21         Baillie Gifford was positive and  
22      outperformed their benchmark, but on an absolute  
23      basis -- on an absolute basis they were up --  
24      they were up 1.4 percent in keeping with other  
25      developed markets. And then, finally, the index

1 fund was basically in line with the index.

2 So those are the areas of return. Fixed  
3 income did well. It was just slightly below  
4 international. It was -- and actually for the  
5 calendar year performed significantly better than  
6 our capital market assumptions. And the reason  
7 for that is if you'll recall, rates dropped for  
8 at least the first half of the year.

9 In addition to that, you had spread exposure  
10 with Thompson Siegel and the bank debt portfolio  
11 manager. We took advantage -- or the portfolio  
12 was able to experience those benefits, and that's  
13 what really drove performance, that spread  
14 exposure. And then we basically -- we continue  
15 to believe that that is attractive.

16 And then moving to the two managers, Loomis  
17 and Neuberger Berman have more of that, so we  
18 think that will be additive to performance.

19 Let me stop there and see if there's any  
20 questions.

21 MR. PATSY: Dan, when is Loomis going to get  
22 funded?

23 MR. HOLMES: Next week.

24 MR. PATSY: Okay.

25 MR. HOLMES: So that's next, I believe, on

1 my review. I was going to review funding of  
2 Neuberger Berman and Loomis.

3 There should be a one-page outline  
4 showing -- or recapping the Neuberger funding.

5 So on December 22nd, Neuberger Berman was funded  
6 with \$159,639,000. They were funded in cash.

7 The source of the funding came from the bond  
8 index fund, and then the termination of the Eaton  
9 Vance bank loans, and then also a portion of the  
10 city's contribution to the pension plan.

11 That was all preapproved previously by the  
12 Board. So it was simply execution during the  
13 month. By year end, the portfolio had been fully  
14 built. And in addition to that, there were  
15 funded, like I said, with about 159,000,000 and  
16 they grew a little bit over the course of the  
17 month to over 160,000,000.

18 And so we reflect there basically their  
19 allocation across the sectors as it stood at the  
20 end of the year.

21 So, again, remember the purpose here was to  
22 get broad fixed income exposure, especially in  
23 the spread sectors, and to do that in a cheaper  
24 version than going with dedicated managers.

25 So at the end of the year, the portfolio had

1           13 percent high yield, 11 percent in TIPS. Other  
2           spread sectors included mortgage-backed  
3           securities and commercial mortgage-backed  
4           securities. US mortgages -- agencies were part  
5           of it, but not much, but mortgages were about 28  
6           to 31 percent. In addition to that, they also  
7           have a little bit of global exposure as well.

8           So bottom line is you've got exposure there  
9           outside of just US investment-grade credit and  
10          government bonds. So that's diversifying.

11          MR. SCHEU: Hey, Dan, what type of mortgages  
12          back those securities, just in general terms?

13          MR. HOLMES: The -- they'll be typical --  
14          you know, first of all, you have agencies, US  
15          agencies, like Ginnie Mae in that type of  
16          portfolio. Then you'll have both commercial  
17          mortgage-backed securities and then traditional  
18          single-family mortgage-backed securities.

19          MR. SCHEU: Thank you.

20          MR. HOLMES: And then, Rick, you had asked  
21          about the funding of Loomis.

22          So the funding dollar amounts have already  
23          been approved by the Board. We're just seeing  
24          through the execution this month. We didn't  
25          execute with them last month because Loomis

1 believed that they weren't going to have enough  
2 liquidity in the market during the month of  
3 December to buy the type of securities they  
4 wanted. So we agreed that it was prudent to wait  
5 until January to do that.

6 So the way they're going to be funded is \$35  
7 million will be redeemed this week from the --  
8 I'm sorry, next week, from the bond index fund.  
9 Thompson Siegel Walmsley will liquidate 74  
10 million from their portfolio. That's a total of  
11 \$109 million. \$1 million will be transferred to  
12 cash for liquidity needs, and then a remaining  
13 \$108 million will be transferred in cash to  
14 Loomis. And they've told us that they'll have  
15 their portfolio built by the end of the month.

16 With their portfolio, my expectation is  
17 we'll see exposure not just in US  
18 investment-grade governments and corporates. It  
19 will probably be more governments, less  
20 corporates.

21 Then in addition to that, they'll have  
22 high-yield bonds. They'll have some emerging  
23 market debt exposure as well. They tend to carry  
24 exposure in Canada as well. And so it will be a  
25 little bit more diversified and a little bit

1 heavier on credit than Neuberger Berman.

2 So that's a recap there. Let me stop and  
3 see if there's any questions.

4 CHAIRMAN TUTEN: Nothing so far, Dan.

5 MR. HOLMES: Okay. Thank you.

6 And then, finally, there is a -- there  
7 should be a handout. It's designed to identify  
8 some of the risks and opportunities as we see the  
9 market today.

10 I think there's some -- I will -- I will try  
11 your patience for a couple more minutes here, but  
12 I think this will serve as a good background for  
13 some of our thoughts about asset allocation  
14 review and implementation for this calendar year.

15 And so it's entitled "Macro Topics" on the  
16 top, left-hand side. And I'll give you the  
17 Reader's Digest version, but please stop me if  
18 you have any questions.

19 So the take-away on page 1 is basically  
20 showing returns for 2016 for the major asset  
21 classes, or at least the equity asset classes on  
22 this page.

23 So it's designed to show first, as I  
24 mentioned, large cap stocks are up over 12  
25 percent. Small cap stocks up over 21 percent.

1 EAFE, we've noted, was low at 1 percent and  
2 emerging markets at over 11 percent. That was  
3 the return.

4 But the way that the indices achieve those  
5 returns is significant. So you saw kind of a  
6 constant low level of dividends. But the big  
7 issue is the change in the price-earnings  
8 multiple and earnings per share of growth rate.

9 And so the take-away here really is, is that  
10 domestic equities going in the last year we  
11 believe were expensive. We now believe they  
12 they're even more expensive.

13 The run up in price is what drove  
14 performance; whereas, if you looked at actual  
15 earnings per share, the earnings per share for  
16 both large cap stocks and small cap stocks were  
17 negative.

18 And so in our view, those negative earnings  
19 per share is baked into our capital market  
20 assumptions. And so by multiple measures, we  
21 believe that domestic equities markets, both  
22 small and large, continue to be expensive, and  
23 unless earnings growth picks back up, we will  
24 expect lower returns going forward in the future.  
25 Doesn't necessarily mean negative returns, but

1 just lower than what we saw in 2016.

2 For international, we saw not only negative  
3 earnings per share of growth rate in developed  
4 markets, but also the currency effect hurt. And  
5 that also has continued or was a big part of what  
6 happened in the last quarter where the dollar  
7 appreciated over 5 percent.

8 Now, that's not the same with emerging  
9 markets. Emerging markets were the only area  
10 that was relatively attractive across all the  
11 points.

12 Currency was added to performance. They had  
13 real earnings and a decent rate at 5.8 percent  
14 for the index, and then there was positive change  
15 in price, but the multiple expansion was not out  
16 of control.

17 On the bottom of the page, we're taking the  
18 forward-looking measures. And the bottom line  
19 there, if you look on the right-hand side of that  
20 graph on the bottom, the red means warning.

21 So in other words, domestic equities are  
22 overvalued. International equities are  
23 undervalued, and there's a real opportunity with  
24 emerging markets. They continue to be  
25 undervalued, and they have -- they're projected

1 to have positive earnings and currency effects  
2 are supposed to be additive as well.

3 On the page -- the second page, we go  
4 through the exact same exercise with bonds. And  
5 I won't go through every single chart.

6 One thing interesting to note is if you look  
7 at the top right-hand side, if you just look at  
8 the change in the yields, you basically see why  
9 bonds did fairly well for the majority of the  
10 year. That's because we had a declining interest  
11 rate environment, and it wasn't really until  
12 post-election that you saw rates come back up.

13 On the bottom left-hand side, you see the  
14 returns for the various parts of the -- or for  
15 the various bond indices.

16 And a couple things to note, TIPS did well  
17 last year. High yield was up over 17 percent.  
18 Bank debt was up about 10 percent, and emerging  
19 market debt was up about 10 percent.

20 And so in our view, high yield is a little  
21 bit rich, but on the right-hand side it shows --  
22 basically we believe that rates are expensive.  
23 That's shown in the top of the right-hand side,  
24 looking at the government bonds, but we think  
25 that spread product remains attractive, emerging

1 market debts and bank loans, and to some extent  
2 high yield, not quite as much.

3 But basically if you roll up, core plus  
4 looks -- is an efficient way of getting exposure  
5 there, and that looks attractive as well going  
6 forward.

7 On page 3 we do the same thing with real  
8 assets. And, really, the take-away here is our  
9 second warning signal and our second area of  
10 opportunity. And that is MLPs, despite having a  
11 good return last year, continue to be reasonably  
12 priced.

13 On the bottom right-hand side of page 3, you  
14 see that the Alerian MLP index earnings yield is  
15 right in the middle of its historic average at 51  
16 percent. So it's neither expensive nor cheap.  
17 It's kind of right where it is over -- on  
18 average.

19 Distributions, or think of it as dividends,  
20 continue to forecast to be positive. And so we  
21 believe that MLPs can be additive in the  
22 portfolio going forward.

23 Conversely, one area that we're keeping an  
24 eye on is the NCREIF Property index cap rate.  
25 And if you'll look at the bottom right-hand side,

1 you see it's in the 100th percentile.

2 So, folks, what we're saying here is, is  
3 that you've had good price appreciate and income  
4 both in the real estate market as a whole. It  
5 has pushed down going in yields and it's pushed  
6 it down to an historically low level.

7 So as the rates on treasury bonds come up,  
8 the spread between treasury bonds and real estate  
9 basically collapses. It gets narrower.

10 So what that means is that -- if I'm talking  
11 to people who already know the answer, my  
12 apologies, but I want to make sure we're all on  
13 the same page.

14 What that means is as rates go up, core  
15 fixed income looks less attractive because of its  
16 illiquidity. Right now it's still projected to  
17 have a little bit of attractiveness versus core  
18 bonds, but at some point in time we may need to  
19 start pulling back on that. But we need to keep  
20 in mind that at different points, core real  
21 estate can be illiquid.

22 And so we continue to monitor that, but as  
23 we look forward, there's still -- core real  
24 estate still has a little bit of an earnings  
25 advantage over bonds. But as rates rise, that

1 advantage decreases. Does that make sense?

2 MR. BROWN: Yes.

3 MR. PATSY: Dan, how much do rates have to  
4 come up before, you know, you sense that that --  
5 we're in that condition?

6 MR. HOLMES: Rick, without looking at it  
7 closer, I'd say in the ballpark of probably over  
8 2 percent.

9 MR. PATSY: Okay.

10 MR. HOLMES: There's still a -- you know,  
11 there's still a decent spread there, but the  
12 bottom line is, is that -- let me see. I've got  
13 to go back and find the cap rate. But the -- oh,  
14 here it is.

15 The cap rate is 5.1 percent. And so, you  
16 know, you look at that versus where the ten year  
17 is at 2.4 percent.

18 So I think that you still want to have at  
19 least -- in my mind at least a 1 1/2 percent  
20 spread.

21 MR. PATSY: Okay.

22 MR. HOLMES: Let me ask you to finally kind  
23 of turn over to page 5, if you will.

24 And looking at page 5, the take-away here  
25 is, is that we saw the markets react immediately

1 after the election. And we also produced a paper  
2 that hopefully you-all saw called Trumponomics  
3 where we took the economic platform from the  
4 Trump administration as it was professed during  
5 the election, tried to translate that into what  
6 the effect would be on the markets.

7 The bottom line here is that we believe that  
8 almost all of those have already been baked into  
9 the market reaction. There's very little need  
10 for us to adjust our capital market assumptions  
11 going forward because basically a lot of it has  
12 been factored in already by the market reaction  
13 to date.

14 One area that's probably on a lot of  
15 people's minds is the impact on emerging markets.  
16 So the take-away here is, is that emerging  
17 markets came under pressure primarily because of  
18 the professed protective trade policies, the  
19 renegotiation of trade policies as well -- or  
20 trade treaties, and then also the possible  
21 strengthening of the dollar.

22 So as I mentioned, the dollar has already  
23 strengthened. It can probably go up from here,  
24 but right now we believe that the dollar is  
25 overvalued.

1           But the bottom line is, is that the  
2 projected increase for inflation and  
3 manufacturing in the US basically has a positive  
4 outcome or projects a positive outcome for  
5 emerging markets.

6           So the next few slides basically are  
7 designed to illustrate that, but suffice it to  
8 say we're just giving you the headlines. When we  
9 have periods of increasing growth, US growth and  
10 increasing manufacturing and also increasing  
11 inflation with the US dollar, that has been  
12 additive to emerging markets.

13          So we have emerging markets in the  
14 portfolio. It helped us in 2016, and we continue  
15 to think that it will help us in 2017 and beyond.

16          Let me direct your attention finally to page  
17 8. So not only is there a positive relationship  
18 between emerging market equities and US  
19 inflation, US economic growth, there's also a  
20 positive -- or on top of that, emerging markets  
21 continue to be cheap. And so page 8 is just a  
22 demonstration of exactly how cheap they are.

23          And so having that exposure in the  
24 portfolio, like we said, continues to be  
25 additive.

1           And the last few pages are designed to show  
2           that -- or support the fact that the US dollar  
3           has appreciated. And it's basically appreciation  
4           that is to a point now where, you know, you  
5           wouldn't want to do any type of hedging.

6           The dollar can continue to appreciate more  
7           going forward, but since it's appreciated fairly  
8           rapidly and in a fairly strong fashion, we would  
9           expect that most of that is baked in and not --  
10          and we're not overly worried about further dollar  
11          weight as compared to the -- or its effect on the  
12          international exposure in the portfolio.

13          So going forward, we're going to be working  
14          with the FIAC to create an agenda list for the  
15          calendar year, review capital market assumptions  
16          and make adjustments as necessary.

17          I'll stop there and see if there's any  
18          questions.

19          MR. PATSY: So, Dan, are you -- by the way,  
20          this is very well done --

21          MR. BROWN: Yes.

22          MR. PATSY: -- I think this is probably one  
23          of the better, you know, analysis of what to  
24          expect going forward, both on a macro perspective  
25          and on a market perspective. It's sufficiently

1 complicated, but not overly complicated. So  
2 that's good.

3 So are you going to come back with any  
4 recommendations that are actionable based on this  
5 information?

6 MR. HOLMES: Yeah. Yes. We just set our  
7 capital market assumptions. We actually have  
8 been having meetings for the past two weeks  
9 looking at -- going through our normal process of  
10 how we set capital market assumptions.

11 We've had to make some adjustments, very  
12 broadly. We've had to bring down expected  
13 returns a little bit primarily on the fixed  
14 income side. We've had to make some adjustments  
15 in volatility assumptions.

16 Not too many changes on the equity side, but  
17 what I want to do is once that is set -- and it  
18 will be in time for the next meeting, I'm going  
19 to take the current target asset allocation,  
20 marry it with our economic views as expressed in  
21 the capital market assumptions, and then look at  
22 where we think adjustments need to be made.

23 So that will reflect what we think is rich,  
24 what we think is cheap, talk about areas where  
25 the plan doesn't have any exposure, and we're

1 maybe going into some new areas, might be  
2 additive to the portfolio return or reduce risks.

3 MR. PATSY: Okay.

4 MR. HOLMES: So the short answer is yes.

5 So my goal for the year is two-fold: One,  
6 to bring you more of this macro economic  
7 information, and I appreciate any feedback. If  
8 it's too complicated and you just want the  
9 headlines, that's fine. I feel compelled to  
10 support it with research. So we'll provide you  
11 the economic areas, focusing on opportunities and  
12 risks with recommendations for adjustments.

13 And my second resolution is to try to be  
14 shorter in my presentations.

15 CHAIRMAN TUTEN: No, you did a good job,  
16 Dan. Anything else you want to hit us with  
17 before you go, pal?

18 MR. HOLMES: No, sir.

19 CHAIRMAN TUTEN: Rick has a question.

20 MR. PATSY: I forgot to ask this when we  
21 were going through the manager performance.

22 I assume that when you show up in February  
23 with the capital -- with the quarterly update,  
24 you're going to have an extensive review of  
25 Brown?

1                   MR. HOLMES: Yeah. We've been -- we're  
2                   trying to develop consensus with the FIAC as to  
3                   exactly the best way to make transition there.  
4                   And we haven't come to consensus yet about what's  
5                   the best way to handle that, but my hope is that  
6                   will be finished by February meeting.

7                   CHAIRMAN TUTEN: Dan, don't necessarily  
8                   worry about that. As far as we're concerned or  
9                   I'm concerned, I just kind of want to get an  
10                  overview, I think like Rick's getting at, as to  
11                  why they're doing what they're doing or haven't  
12                  done what they haven't done or going to do what  
13                  they're going to do type of a thing.

14                  I mean, we can -- you can still do all that  
15                  stuff you want to, but we just want the overview  
16                  and kind of get into why they've kind of  
17                  underperformed since they've been here.

18                  MR. HOLMES: Understand. I can give you a  
19                  two-minute overview now if you need to, if you  
20                  would like it.

21                  MR. BROWN: Yes, sure. Let's do that.

22                  MR. HOLMES: Okay.

23                  So I've met with them extensively. You're  
24                  not the only client where we have Brown. So  
25                  you're now to the point -- hold on one second.

1           Active management in large cap has been  
2 difficult. It's been made more difficult during  
3 the period of quantitative easing. The reason  
4 why that has been made difficult is that  
5 quantitative easing had its desired effect. It  
6 basically raised all boats in the equity markets  
7 and basically raised valuation of the equity  
8 markets by forcing more money into the markets.

9           You make fixed income and cash less  
10 attractive, and so investors have to go someplace  
11 for a return.

12          During quantitative easing, by and large,  
13 dividend-paying stocks and especially higher  
14 dividend-paying stocks and also defensive sectors  
15 have greatly outperformed the more sustainable  
16 growth-type stocks.

17          The only time period that we saw that rotate  
18 back around was 2015 where quantitative easing  
19 ended. Investors looked and said, hey, wait a  
20 minute. These high dividend-paying stocks and  
21 defensive sectors have really gotten run up in  
22 price because of all the money that's moved into  
23 them. They looked around and they realized that  
24 these growth stocks that Brown and other managers  
25 had were cheap, and they piled in during 2015.

1                    Unfortunately that reversed in 2016 again.  
2                    The market got nervous at the beginning of the  
3                    year and went back.

4                    So the bottom line is it's been very hard  
5                    for active managers that tend to emphasize  
6                    companies that have higher quality balance  
7                    sheets. They have less debt. They tend to have  
8                    more sustainable earnings growth. Valuation can  
9                    vary.

10                  What we saw, that by investors supporting  
11                  the higher dividend paying, they tend to be less  
12                  growthy. They have to pay dividends to get  
13                  investors to invest there. They also tend to  
14                  have lower quality balance sheets.

15                  So those more momentum-oriented stocks  
16                  really did well to -- against the more  
17                  sustainable growth stocks that Brown and other  
18                  large cap growth managers traffic in.

19                  So large cap active has been under pressure  
20                  relative to passive. Large cap growth active has  
21                  been under significant pressure during that time  
22                  period.

23                  Brown, compared to peers, also has not done  
24                  quite as well. The reason they have not done  
25                  quite as well is they run a more concentrated

1 portfolio, fewer names, bigger positions.

2 In a number of cases, some of names that  
3 they've bought have been under price pressure.  
4 They simply have not performed well. They would  
5 love to talk to you and tell you the stock story;  
6 but finally, in the end, the greater degree of  
7 concentration will help them recover faster, but  
8 that's also been the driving force why they have  
9 underperformed worse than other large cap growth  
10 managers.

11 Active large cap growth managers across the  
12 board have not done well. The passive index has  
13 done extremely well compared to active. But  
14 Brown has done worse in that.

15 And so the question going forward is, should  
16 we continue with simply a replacement with  
17 another large cap growth manager? Do we just get  
18 rid of Brown, or do we go more passive?

19 And so there's a significant argument to be  
20 made for the passive side there. Again, we're  
21 trying to work out --

22 CHAIRMAN TUTEN: Dan --

23 MR. HOLMES: Now, the challenge there is  
24 you've got the Dow and the S&P now kind of coming  
25 off all-time highs. The question is, do you put

1 more into passive while it's still relatively  
2 expensive?

3 CHAIRMAN TUTEN: Hey, Dan, do you guys see  
4 anything in your economic forecast in the future  
5 that would actually help Brown as far as  
6 performance-wise?

7 In other words, with the future economic  
8 policies of Trump, the emerging markets, blah,  
9 blah, blah, anything like that? In other words,  
10 reasons for us to hold onto that or --

11 MR. HOLMES: That's a great question, and  
12 that's exactly the way we should be thinking.  
13 The challenge there is their implementation.

14 So, in other words, kind of across that  
15 market as a whole, yeah. If you look at the  
16 growth -- the growth index PEG ratio and Brown's  
17 PEG ratio, it's relatively low. And with the PEG  
18 ratio is the price, the earnings, relative to the  
19 growth rate.

20 We saw a low like this in 2015 when growth  
21 outpaced value. So in 2015, large cap growth  
22 came back and outperformed value by 9 1/2  
23 percent. During that time period, Brown  
24 outperformed the index by over 2 percent.

25 But here's the issue. Because of their

1 concentration, one, can they still physically do  
2 that? Yes. But they're going to have to -- you  
3 know, they're going to have to hit from the  
4 cycle. They're going to have to hit from the  
5 cycle for a decent period, and they're going to,  
6 you know, have to get that stock selection  
7 correct.

8 And so the concentrated nature of their  
9 portfolio is going to either make them or break  
10 them. They're going to have to get them all  
11 right, or if they get them wrong -- if they get  
12 them wrong in a big way, they're going to dig the  
13 hole deeper.

14 MR. PATSY: Dan, let's back up a step.

15 You know, you're attributing a lot of their  
16 underperformance to the issues of quantitative  
17 easing and what it's motivated investors to do.

18 Quantitative easing, while it may not be at  
19 an end, it certainly is much closer than it was  
20 12 months ago.

21 What is your expectation going forward  
22 between the relationship of passive versus  
23 active? If passive has been, you know, the  
24 driving force, is that going to change going  
25 forward?

1                   MR. HOLMES: My expectation is different for  
2 different parts of the market.

3                   And so here we're simply talking about large  
4 cap domestic equities. My expectation is, as the  
5 US equity market, large cap equity market, as  
6 those indices ease a little bit, if you go  
7 through a period where the market shows concern  
8 about either the new administration not being  
9 able to get economic policies accomplished, or if  
10 earnings come in -- we're starting earnings  
11 season now -- if earnings come in fairly  
12 disappointing.

13                  And, again, why would they be disappointing?  
14 A stronger dollar tends to put pressure on US  
15 manufacturing. You know, so there's a variety of  
16 reasons in addition to that, but that's one of  
17 them.

18                  If earnings come in disappointing, that  
19 would cause the equity market the trade off.  
20 During that time period, you're going to -- if  
21 you accept the returns of the index, you're going  
22 to have negative returns, assuming that the  
23 markets are trading off.

24                  Active management tends to be more equally  
25 weighted than market weighted, and that's usually

1 where active manager adds value, is by protecting  
2 on the down side.

3 Now, the question is, how persistent is that  
4 added value? And my view is, is that it's  
5 difficult on a net-of-fees basis and especially  
6 on the growth side of the ledger to persistently  
7 add value above the index.

8 MR. PATSY: So can I sum your answer as you  
9 expect passive to continue to outperform active  
10 as long as the markets are going up?

11 MR. HOLMES: Over trailing, say, rolling  
12 five-year periods, I would expect -- you know, if  
13 I had to kind of translate it, I would expect  
14 it's a look like where passive stays right around  
15 median on a net-of-fees basis.

16 MR. PATSY: Okay. So good active manager  
17 ought to add value.

18 MR. HOLMES: Which doesn't sound -- it  
19 sounds kind of average over time, but when you  
20 think about it, and if you think about my prior  
21 statement, that -- that the persistence is not  
22 there as much on the growth side, I think there's  
23 your answer.

24 MR. PATSY: Okay.

25 MR. BROWN: How long do we give Brown to,

1 quote, hit the cycle, is the question.

2 MR. HOLMES: I would like to have an answer  
3 in February.

4 MR. BROWN: Okay.

5 CHAIRMAN TUTEN: Dan, can you give us  
6 Brown's returns for a longer time period, going  
7 back, say, ten years? In other words --

8 MR. HOLMES: Yeah --

9 MR. BROWN: Can you bring those in February?

10 MR. HOLMES: Let me grab something off my  
11 table.

12 CHAIRMAN TUTEN: I don't need them right  
13 now, Dan. Just bring them with you.

14 MR. BROWN: Yeah, in February. If you could  
15 bring that information on Brown, maybe a more  
16 comprehensive report on the performance over the  
17 last decade to the February meeting.

18 MR. HOLMES: Yeah. The bottom line is they  
19 have underperformed over the trailing  
20 one-through-seven-year periods. You have to go  
21 out ten years to get above the index. And on a  
22 net-of-fees basis, it's almost a push.

23 But I'll put together a report on Brown and  
24 send it to you.

25 CHAIRMAN TUTEN: All right. Thank you, Dan.

1 MR. HOLMES: My pleasure.

2 CHAIRMAN TUTEN: Anything else, anybody?

3 (No responses.)

4 CHAIRMAN TUTEN: I think that will do it for  
5 today, Dan. We appreciate everything you do,  
6 buddy, and good luck with everything.

7 MR. HOLMES: Thank you. I appreciate  
8 your -- you guys' support.

9 CHAIRMAN TUTEN: Any time, Dan. We look  
10 forward to February, my friend.

11 MR. HOLMES: Ditto. Everyone take care,  
12 have a great day.

13 CHAIRMAN TUTEN: All right, brother.

14 MR. PATSY: You too. Thanks, Dan.

15 MR. HOLMES: Thank you.

16 CHAIRMAN TUTEN: Director, is that it? Oh,  
17 we have one more thing.

18 DIRECTOR JOHNSON: We have one more thing.

19 If you'll look on your agenda, we had  
20 anticipated that Linda Dufresne from KBLD would  
21 be here presenting our external audit for 2016.

22 You know, I asked Devin -- Devin, if you  
23 wouldn't mind, just for the record, give the  
24 Board a couple of comments about, you know, why  
25 we didn't have the report done, what you

1           anticipate, you know, the Board seeing when we do  
2           get the report and when the report is going to be  
3           here.

4           MR. CARTER: Okay. We decided -- we agreed  
5           to defer the report given the fact that  
6           uncertainty in the actuary report because it goes  
7           into the financial statement, and they want to  
8           review it one more time again.

9           Then also to the Keane lawsuit, they want to  
10          speak with OCG just in case there's any  
11          contingencies or not.

12          We plan to have the report done by the 31st.  
13          It will tentatively be submitted to the city  
14          pending Board approval on the February 17th  
15          meeting.

16          So we didn't feel comfortable presenting  
17          something, given the fact we didn't know what  
18          decision was going to be made.

19          DIRECTOR JOHNSON: Very good. Any questions  
20          for Devin?

21           (No responses.)

22          MR. BROWN: Thanks, Devin.

23          DIRECTOR JOHNSON: That's all for New  
24          Business, Mr. Chairman.

25          CHAIRMAN TUTEN: Well, unless someone else

1 has something exciting to add, which I hope they  
2 don't, meeting adjourned.

3 DIRECTOR JOHNSON: Thank you.

4 (The meeting concluded at 10:32 a.m.)
