

JACKSONVILLE POLICE AND FIRE PENSION FUND  
BOARD OF TRUSTEES AND FIAC MEETING

---

DATE: April 21, 2017

TIME: 9:00 a.m. to 12:30 p.m.

PLACE: Jacksonville Police and Fire Pension Fund  
One West Adams Street  
Suite 100  
Jacksonville, Florida 32202

BOARD MEMBERS PRESENT:

Richard Tuten, III, Board Chair  
Richard Patsy, Board Secretary  
William Scheu, Trustee  
Willard Payne, Trustee  
Chris Brown, Trustee

STAFF PRESENT:

Timothy Johnson, Executive Director  
Stephen Lundy, Pension Benefits Specialist  
Devin Carter, CFO  
Robert Sugarman, Board Counsel (via Webex)  
Peter Strong, Fund Actuary (via Webex)  
Dan Holmes, Summit Strategies Group

FIAC MEMBERS PRESENT:

Craig Lewis, Chairman  
Robert Kowkabany  
Tracey Devine

CITY REPRESENTATIVES PRESENT:

Lawsikia Hodges, Office of General Counsel  
Anna Brosche, City Council Liaison  
Joey Greive, Fund Treasurer

GUESTS:

Maya Saxena, Esq., Saxena White

Stenographically reported by:  
Denice C. Taylor, FPR  
AAA Reporters  
steno@comcast.net

## BOARD MEETING

April 21, 2017

9:00 a.m.

- - -

CHAIRMAN TUTEN: All right. Call the meeting to order. Let's say the pledge of allegiance real quick.

We pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one nation, under God, indivisible, with liberty and justice for all.

CHAIRMAN TUTEN: Everybody stay up for just a second. We're going to have a quick moment of silence for the deceased members: William Anderson, firefighter; Larry Hester, firefighter; Warren Jennings, police officer; Michael Johnson, police officer; Claude Midget, police officer; and Gene Parker, police officer.

(Pause)

CHAIRMAN TUTEN: All righty. Thank you very much.

We have the public speaking period. Bill, before we get to that, Director Johnson --

DIRECTOR JOHNSON: Yes, sir.

CHAIRMAN TUTEN: -- Trustee Scheu has to leave. How long did you say, Bill?

1 MR. SCHEU: By 11, 10:30, 11, to get to the  
2 airport. So I'll miss the interviews.

3 DIRECTOR JOHNSON: We'll have a quorum.

4 MR. SCHEU: Yes, you will.

5 DIRECTOR JOHNSON: But you will miss the  
6 interviews.

7 MR. SCHEU: Yes. I read it.

8 DIRECTOR JOHNSON: Good.

9 CHAIRMAN TUTEN: Are you going to be here  
10 for Dan's presentation and be able to vote?

11 MR. SCHEU: Yes.

12 CHAIRMAN TUTEN: Okay. That's fine.

13 All right. Bill.

14 MR. GASSETT: The dog ate my homework and  
15 I'm going to need to ask you guys to share, you  
16 two, you by yourself. And what I chose to pass  
17 out based on the comments from last Monday's  
18 meeting was a little bit of concern.

19 This first thing I'm handing out just shows  
20 the retirement income table taken from the data  
21 provided by the actuary. And what it shows is  
22 under current investment strategy, balances,  
23 stuff like that, that having to live to 82 years  
24 at the current returns, you have a danger here, I  
25 think, in which it shows -- let me make sure I

1 passed out the right one.

2 Yeah. I think the comment was made that as  
3 you get further down the road towards the closing  
4 of -- the inevitable closing of the plans, that  
5 you get more conservative with your investments.

6 From my own experience being in the  
7 business, that's true, but what you've done the  
8 last two or three years, what this shows is, is  
9 that if you decided to get conservative and  
10 downshift to a 5 percent return, which would be  
11 pretty darn conservative, but on that basis of  
12 fear, what you would have to come in with -- and  
13 second page, you will look behind the second  
14 chart -- an additional \$500 million to finish the  
15 completion of the plan.

16 In other words, the first chart shows you to  
17 stay on course, you would need to -- you still  
18 have to come in with about a couple hundred  
19 million if you decided to go to a 5 percent  
20 downshift, going more into bonds and things like  
21 that. Suddenly your liability grows because the  
22 markets are not carrying their weight, and the  
23 City Council has to vote in an extra \$500  
24 million.

25 So I know it's 10 or 15 years down the road,

1 but please use that in your guidance about, you  
2 know, the cut off the plans.

3 One other table that I did not pass out,  
4 just a quick update based on today's actuarial  
5 table, that sort of thing, you need to raise the  
6 amount of \$1.7 billion as of today in order to  
7 take care of the class if you just froze in time  
8 with the people you have, no new additions,  
9 people just coming out and going over time.

10 You've got 1.5 billion that to -- to come up  
11 short to about 97 years when the guy -- when the  
12 appropriate class would be dead, you'd still have  
13 three more years to go to fund. That means you  
14 need to put in about another \$200 million, just  
15 to stay it going.

16 I didn't mean to confuse you, and my  
17 apologies, but I think this kind of modeling  
18 needs to be considered as you go down the road.

19 It's interesting that you're about 1.8  
20 billion, I think, under water, 1.6. If you take  
21 the 200 million you're short right now just to  
22 take care of your current retirees, add that to  
23 the average salary in the actuarial tables, it  
24 comes to 1.8 billion. It's amazing how 1 plus 2  
25 is equal to 3 in this case.

1 Any questions?

2 CHAIRMAN TUTEN: No, Bill. I appreciate the  
3 info, though.

4 MR. GASSETT: I hope this will be of some  
5 service to you.

6 CHAIRMAN TUTEN: Thank you, sir.

7 All right. We have the Consent Agenda up  
8 for approval. We need a motion and a second.

9 MR. SCHEU: So moved.

10 CHAIRMAN TUTEN: We have a motion.

11 MR. PATSY: Second.

12 CHAIRMAN TUTEN: Okay. We have a motion and  
13 a second. Any questions, comments, concerns?

14 (No response.)

15 CHAIRMAN TUTEN: All in favor?

16 (Responses of "aye.")

17 CHAIRMAN TUTEN: Opposed?

18 (No responses.)

19 CHAIRMAN TUTEN: Zero. Okey-doke.

20 We'll turn it over now to our director,  
21 Mr. Johnson.

22 DIRECTOR JOHNSON: All right. Thank you,  
23 Mr. Chairman.

24 If you would turn to your Executive Director  
25 Report tab in your book, I'll be relatively brief

1           today because we have a lot on our agenda that we  
2           have to get to. So I wanted to comment on a  
3           couple of things.

4           One, I've included a copy of our 2016 Annual  
5           Report. This is a draft. I sent it out in  
6           advance to the members of the Board to review.  
7           It's been several years since this Board has  
8           published an annual report. And I'm committed to  
9           doing this annually from this point going  
10          forward.

11          It will be a snapshot each year of the prior  
12          fiscal year ending. So this is a snapshot of  
13          where the plan was as of September 30th of 2016.  
14          You'll see the cover. I'm really pleased with  
15          the work that Stephen Lundy has done. Not only  
16          has he enhanced the quality of your Board book,  
17          so your Board book now is much better structured,  
18          easier for you to see action items.

19          So, for example, action items on your agenda  
20          are now identified. You can go into the meeting  
21          anticipating things that are going to require a  
22          motion and a vote.

23          But he also did a great job in designing  
24          this annual report format. And, Stephen Lundy,  
25          if you don't know, is seated right here at the

1 end of the table.

2 So included in the report, if you wouldn't  
3 mind, I'd like to just take you through it, is a  
4 letter from our chairman, Rich Tuten, in which he  
5 highlights the past fiscal year end and the  
6 things that have occurred under his leadership  
7 and through the efforts of the members of the  
8 Board and the staff, as well as our professional  
9 service providers.

10 After that, you'll see a copy of the  
11 auditor's report. This report was just approved  
12 by the Board a month or so ago. So the items  
13 that are here are the published and approved  
14 reports of the Board of Directors. And in this  
15 case, we begin with the auditor's report and the  
16 financials that follow on pages 6 and 7.

17 And then we go to the report of the actuary.  
18 This was the report that was approved by the  
19 Board as well in January of this year. So it  
20 includes a statement of the actuary as well as  
21 key pages from the actuarial report, a page  
22 covering the minimum required contribution, and  
23 the amortization of the unfunded liability.

24 And then we've got a great page that is our  
25 consultant's annual report. And this was a page

1 that was written by Dan Holmes, who is here at  
2 the table, in which he gives a highlight of  
3 what's happened in the industry as well as  
4 specifics related to this plan.

5 So our members now, through this report, can  
6 not only see financially where we stand,  
7 actuarially where we stand, but they can also  
8 see, from a high level, what the Board has done  
9 in the management of the financial assets.

10 The last page includes a list of the Board  
11 members, our professionals service providers. We  
12 give recognition to both the Pension Advisory  
13 Committee and the FIAC. We have a list of all of  
14 the money managers. And on the back is contact  
15 information for the office and the staff.

16 This is a colored report that is bound with  
17 pressure, folded with a wafer so we'll be able to  
18 mail it to our members who don't have access to  
19 computers, our retired members. We will send a  
20 copy over to council, and we'll publish a copy on  
21 our website.

22 So I'm very proud of this. It's been part  
23 of our strategy. You know, outreach is a big  
24 part of our strategy, and this is a way that we  
25 can keep our members informed about what's

1           happening.

2                   I'm sorry. Bill?

3           MR. SCHEU: No, no. I read this last night  
4 and I thought it was great. And this is another  
5 accounting question.

6                   If you look at the balance sheet, and I  
7 remember this came up when we talked to the  
8 auditor, it makes it look like we're really in  
9 great shape with a billion 7 in assets and a  
10 billion 6 in liabilities. But there's no mention  
11 of the accrued unfunded liability.

12                   So from an accounting perspective, how  
13 would -- I mean, I know you've got the other  
14 sheet over here, but that's really confusing for  
15 a layperson.

16                   How do we -- from an accounting perspective,  
17 how do they accurately reflect that deferred  
18 liability? Because it makes it look like we're a  
19 hundred million dollars to the good.

20                   DIRECTOR JOHNSON: Well, let me -- let me  
21 try to clarify. So if you look at page 9 of the  
22 report, you'll see how the actuary calculates the  
23 city's minimum required contribution.

24                   And at the top it includes a calculation of  
25 our liabilities, and it subtracts from there the

1 market value of assets. So that difference on  
2 line 3 is the unfunded actuarial accrued  
3 liability.

4 Is there another liability that you're  
5 looking for?

6 MR. SCHEU: Well, just on the balance  
7 sheet -- and, Chris, you may know the answer to  
8 this, just on the balance sheet --

9 DIRECTOR JOHNSON: On a balance sheet basis.

10 MR. SCHEU: If you look at the balance  
11 sheet, it looks like we're just in tremendous  
12 shape. So you have to go beyond that. How  
13 does --

14 MR. BROWN: Well, this balance sheet follows  
15 the standards for balance sheets. And I think  
16 what you're probably asking for and what would be  
17 required for a layperson to truly understand what  
18 you're saying --

19 MR. SCHEU: Yeah.

20 MR. BROWN: -- is for there to be either  
21 some sort of an explanation to go with it. But I  
22 don't know if that would be getting too deep in  
23 the weeds.

24 You're right. It does take a little bit of  
25 background and understanding the nature of

1 balance sheets and such to be able to understand  
2 what this is taking a snapshot of versus what  
3 this is. I'm not so sure there's an easy way to  
4 do that.

5 DIRECTOR JOHNSON: Our fund treasurer is  
6 here and he can probably comment on it not only  
7 as the treasurer, but also as a member of the  
8 general employee's plan.

9 MR. GREIVE: Yes. And through the Chair to  
10 Trustee Scheu, I too can understand the lack of  
11 clarity that some may take from this.

12 This Deferred Outflows measure in the middle  
13 of page 6 was an addition that was brought about  
14 by GASB 67 and 68. Very confusing, very  
15 difficult for even those in the industry to get  
16 their heads around when constructing this but  
17 unfortunately required disclosure under GASB.

18 And as Trustee Brown suggested, perhaps --  
19 and I don't know if this would -- you know, we  
20 could talk to Devin and Kevin Stork, but maybe  
21 put a little footnote at the bottom and just say,  
22 you know, for a more understandable  
23 representation of the fund's position, please  
24 also refer to page 9, to connect the two pages so  
25 that one doesn't just read this page and say, oh,

1 we're good. It gets to your point.

2 MR. SCHEU: I can see this going over to  
3 City Council and saying, man, what are we worried  
4 about?

5 MR. CARTER: Well, we're --

6 DIRECTOR JOHNSON: Hold on one minute. So I  
7 respect where you're coming from, and we're going  
8 to make notes of this.

9 We also did not amend the reports of the  
10 professionals that sent this over. So we  
11 published it as it was given to us.

12 MR. SCHEU: Sure.

13 MS. BROSCHE: And you're not allowed to.  
14 You're not allowed to.

15 MR. GREIVE: There you go.

16 MR. SCHEU: You're the accountant.

17 DIRECTOR JOHNSON: I'm sorry, Devin. Go  
18 right ahead.

19 MR. CARTER: We're not allowed to amend the  
20 report, but there is a note that states you need  
21 to read the disclosure notes along with financial  
22 statements.

23 Please remember that this is accounting for  
24 the assets as a whole and not the liability,  
25 because that's not the responsibility of the

1 fund. That's of the plan sponsor. So they  
2 actually record a liability.

3 However, in the notes -- I can't think of  
4 what the number is -- you will notice what the  
5 total liability is less the assets in unfunded.  
6 So that's why there's an asterisk at the bottom  
7 that states when you read the financial  
8 statements, you need to read the notes along with  
9 it.

10 MR. SCHEU: Okay. So I do remember that  
11 came up and that's how we handled that.

12 MR. CARTER: Yes. That's the requirement.  
13 So, therefore, any time that you see the numbers,  
14 what-not, it states read the notes along with it.

15 MR. SCHEU: Okay.

16 MR. BROWN: Certainly talking about -- oh,  
17 I'm sorry, Anna.

18 MS. BROSCHE: That's okay.

19 To Devin's point about the fact that there's  
20 usually a footer that says to read the footnotes,  
21 we probably want to make sure that that's in  
22 here. And I think that the auditor would want to  
23 know that that was there too.

24 MR. BROWN: It would be good for the  
25 retirees.

1           DIRECTOR JOHNSON: Yeah. That's a great  
2 point. Now, that note is on the auditor's  
3 report. If you look on page 5, you'll see that  
4 reference is made.

5           Was there another -- was there another  
6 comment?

7           MR. BROWN: This is really good, Tim.

8           MR. GREIVE: Very good report, though.

9           CHAIRMAN TUTEN: I like it. It's good, it's  
10 thorough, you know --

11          MR. PATSY: The picture on page 2, I don't  
12 know.

13          MR. BROWN: I've never seen him smile that  
14 much, though. I don't know how you got that  
15 picture.

16          DIRECTOR JOHNSON: That was 14 years ago.

17          (Laughter)

18          CHAIRMAN TUTEN: Yeah, that was about two  
19 years on the Board, trust me. You won't get that  
20 same picture today, I can promise you. Looks  
21 like he wants to kill somebody in his new  
22 picture.

23          (Laughter)

24          CHAIRMAN TUTEN: No, let's take the old one  
25 and run with that. Thank you.

1 DIRECTOR JOHNSON: All right.

2 Maybe my counsel can tell me whether Board  
3 action is necessary before we publish this.

4 MR. SUGARMAN: I would prefer that the Board  
5 approve it.

6 Lawsikia, do you agree?

7 MS. HODGES: I totally agree.

8 DIRECTOR JOHNSON: All right. So if you  
9 wouldn't mind, through the Chair, asking for a  
10 motion to approve the annual report.

11 MR. SUGARMAN: With the correction of the  
12 name of the lawyers. Bob Klausner's name is  
13 still in there. We don't want him getting phone  
14 calls from interested members, nor does he, I  
15 think.

16 CHAIRMAN TUTEN: All right. Do we have a  
17 motion?

18 MR. PAYNE: So moved.

19 DIRECTOR JOHNSON: Let's talk about that.  
20 I'm sorry.

21 MR. GREIVE: But it was during that year.

22 DIRECTOR JOHNSON: This was a snapshot of  
23 September --

24 MR. BROWN: This was a snapshot --

25 (Simultaneous speech.)

1 MR. SCHEU: I noticed that too.

2 DIRECTOR JOHNSON: That's right. That's why  
3 it was there. Exactly.

4 CHAIRMAN TUTEN: All right. We have a  
5 motion by Willard. And do we have a second?

6 MR. PATSY: Second.

7 CHAIRMAN TUTEN: Second by Mr. Patsy. All  
8 right. Any questions, comments?

9 (No responses.)

10 CHAIRMAN TUTEN: All in favor?

11 (Responses of "aye.")

12 CHAIRMAN TUTEN: Opposed?

13 (No responses.)

14 CHAIRMAN TUTEN: There you go.

15 DIRECTOR JOHNSON: Thank you.

16 If you wouldn't mind grabbing the attachment  
17 that was on the table, is it an updated copy of  
18 our Actuarial Impact Statement. That's hot off  
19 the press. It was just produced by Pete Strong  
20 this week.

21 And it does two things: One, it approves --  
22 it illustrates the impact of the 4.25 and 1.25  
23 payroll growth rate. If you might recall from  
24 Monday's meeting, our treasurer recommended that  
25 we have a new set of projections done that

1 reflect those assumptions. So those are  
2 included.

3 And this was one more recommendation that  
4 our treasurer made relative to the Better  
5 Jacksonville Plan and the money that was  
6 designated to go to the beaches. And so I don't  
7 butcher that explanation, I'll ask our treasurer  
8 if he wouldn't mind giving the Board a brief  
9 update and justification for the change.

10 MR. GREIVE: Sure. Yes.

11 So Tim and I talked maybe a week or two ago  
12 on that topic. And when the initial work was  
13 done by GRS, they used the current surtax as it's  
14 reduced for the beaches and Baldwin.

15 That is unique to the BJP infrastructure  
16 surtax which will not be included in the pension  
17 liability surtax calculation.

18 So rather than reducing the total 83  
19 million-ish number down to 80 for that split, you  
20 know, we had sent over numbers at the outset of  
21 this process that included the unreduced amount.

22 The consultants that you hired, for whatever  
23 reason, used the reduced amount. But my  
24 understanding from having just seen this in Tim's  
25 comments are that this is now adjusted for the

1 full 83 million starting value.

2 DIRECTOR JOHNSON: That's right.

3 MR. GREIVE: And why that's important is,  
4 you know, when you're growing it at whatever rate  
5 you grow it at, you know, a \$3 million difference  
6 in the starting value will compound over time and  
7 will lead to a couple hundred-million-dollar  
8 difference in the final -- the present value  
9 determination long-term, and which will impact  
10 your ADEC. I think had you calculated -- what  
11 was the number? 187 --

12 DIRECTOR JOHNSON: It's on page -- Pete, is  
13 that you?

14 MR. STRONG: Yes. I'm on the phone. It  
15 changed from 137 down to 135. So it's a little  
16 less than the \$2 million reduction in the ADEC.

17 MR. GREIVE: And we appreciate you updating  
18 it for that.

19 MR. STRONG: Sure.

20 DIRECTOR JOHNSON: And Pete is referring  
21 specifically to page 13 of this report. At the  
22 bottom of page 13, line K, you'll see the  
23 Actuarially Determined Contribution.

24 MR. GREIVE: Right.

25 DIRECTOR JOHNSON: And that is the \$2

1 million difference. So basically it's saving the  
2 city about \$2 million. The city is putting a  
3 little less money into the plan than it would  
4 have based on the old report. But this report is  
5 accurate.

6 We had talked, Joey and I, about updating  
7 this when we did the actuarial report next fall.  
8 But since we needed to update it anyway, we  
9 decided to do it now.

10 MR. GREIVE: That's fine.

11 DIRECTOR JOHNSON: So through the Chair, I  
12 would ask for a motion that the Board accept this  
13 report, this update, to replace the report that  
14 we approved, I guess, two weeks ago? All right.

15 MR. BROWN: I make a motion we accept the  
16 amended report in lieu of the previous one.

17 CHAIRMAN TUTEN: Second?

18 MR. PATSY: Second.

19 CHAIRMAN TUTEN: I have a motion and a  
20 second to accept the new report from Pete.

21 Any questions, comments?

22 (No responses.)

23 CHAIRMAN TUTEN: All in favor?

24 (Responses of "aye.")

25 CHAIRMAN TUTEN: Any opposed?

1 (No responses.)

2 DIRECTOR JOHNSON: All right. So I  
3 appreciate --

4 MR. STRONG: Tim, do you also have a copy of  
5 the updated projections that we prepared  
6 reflecting this adjustment too?

7 DIRECTOR JOHNSON: Yes, we do, Pete. And so  
8 the Board has a copy of both that Actuarial  
9 Impact Statement as well as of the additional  
10 projections.

11 Did you want to talk about that for the  
12 Board, the two attachments?

13 MR. STRONG: Well, I wanted to make one  
14 point about those.

15 And our initial projections, they were only  
16 for a 30-year period, and we had not reflected a  
17 minimum city contribution after the initial  
18 30-year fresh-start amortization is paid down.

19 And so when we reflect either 110 million or  
20 100, 125 million as a minimum contribution  
21 beginning in 2048 or '49, after that initial  
22 30-year amortization is paid off, the  
23 contribution would fall substantially or is  
24 projected to decrease substantially because  
25 that -- that large payment for that initial \$1.2

1 billion base is no longer being paid.

2 And so after 2047, if you reflect the \$110  
3 million minimum, that leads to a payoff date or a  
4 hundred percent full-funding date earlier than  
5 2060. It would be -- we're estimating 10/1/56  
6 with \$110 million minimum, and on 10/1/51, with  
7 \$125 million minimum.

8 DIRECTOR JOHNSON: So, Pete, break it down  
9 for us just a little bit more.

10 The Board members have a copy of the report,  
11 and I believe that you're referring to pages 6  
12 and 7?

13 MR. STRONG: Yes.

14 DIRECTOR JOHNSON: So if the Board members  
15 would turn to pages 6 and 7 of the second report.  
16 So you've approved the Actuarial Impact  
17 Statement. Now we're looking at the second  
18 letter that's attached, pages 6 and 7.

19 And, Pete, I apologize to you, but they  
20 didn't have the document in front of them.

21 MR. STRONG: Oh, okay.

22 DIRECTOR JOHNSON: So could you show them  
23 specifically the changes, the difference between  
24 what we recommended with the minimum \$125 million  
25 contribution versus the 110.

1 MR. STRONG: Sure.

2 On page 6, we reflect a minimum liquidity  
3 ratio of 5-to-1 and \$110 million minimum  
4 contribution. And as you can see there, we're  
5 assuming that \$110 million minimum would no  
6 longer need to be paid once the plan reaches full  
7 funding.

8 And so that occurs, if you look at the  
9 valuation date, which is the second line, you see  
10 by 10/1/56 -- or the second column, 10/1/56,  
11 the -- we're assuming the surtax cuts get off,  
12 there's no more contributions, no more minimum  
13 contributions necessary. And the funded ratio  
14 would be 104 percent at that point.

15 So having that minimum, instead of the  
16 contribution falling off and down into the  
17 20-something-million range, having a minimum city  
18 contribution of 110 million does lead to faster  
19 funding of the plan.

20 From 10/1/46 to 10/1/56, you can see that  
21 the funded ratio climbs very quickly because you  
22 have both \$110 million coming in from the city  
23 and a large amount of surtax revenue starting to  
24 pour in at 15 years into the process. And that  
25 funding ratio goes from estimated 52 percent all

1 the way to 104 percent in just ten years.

2 On the next page we reflect what the Board's  
3 recommendations to council were, and that  
4 includes a 7-to-1 minimum liquidity ratio.

5 If you look at the 2029 or 10/1/27 valuation  
6 date and scroll over, you see that the liquidity  
7 ratio hits 7-to-1 at that point before the surtax  
8 revenue starts coming in, and that requires the  
9 city contribution to go up over 200 million in  
10 order to maintain a 7-to-1 liquidity ratio.

11 You know, maintaining that, eventually you  
12 no longer have to pay, you know, in excess of 200  
13 million. Eventually it's the 125 million once  
14 the surtax revenue starts coming in, and then  
15 that 125 million stays the contribution  
16 requirement all the way until 2050.

17 And then at 10/1/51 is when you would be  
18 expected to reach full funding with a 7.0 minimum  
19 liquidity ratio and \$125 million minimum  
20 contribution.

21 And then that assumes after 2051 -- after  
22 2052, there's no more -- no more surtax revenue  
23 coming in. So the present value of future surtax  
24 revenue then drops to zero because the plan is at  
25 100 percent funded.

1           DIRECTOR JOHNSON: All right. Any questions  
2 for Pete?

3           CHAIRMAN TUTEN: Pete, how hard would it be  
4 to do some alternative scenarios just for, you  
5 know, placating my own interest? Nothing  
6 official, of course.

7           But if I sent you an email and said, look,  
8 how about a 5 percent return, 4, 3? I think we  
9 discussed it in the past. Can you print  
10 something like this up pretty easily or is that  
11 going to take a lot of time?

12          MR. STRONG: We've got the infrastructure  
13 built to be able to do that. We still have to go  
14 through our review process whenever we publish  
15 documents, but I think -- I mean, I think we  
16 could do iterations on this in probably a couple  
17 hours, two to three hours per iteration now.

18          CHAIRMAN TUTEN: Okay. Well, I wouldn't  
19 change anything other than assumed rate of  
20 return, the 7 percent. That's the only thing I'm  
21 looking to change.

22          MR. STRONG: Okay.

23          CHAIRMAN TUTEN: Just a heads up. And I'll  
24 get with Tim and send you something.

25          MR. STRONG: Okay. All right. No problem.

1 MR. SCHEU: I was a little confused by the  
2 discussion that Pete just did.

3 Was he -- I heard him to say that the  
4 minimum contribution by the city is in addition  
5 to the sales tax, but that's not right. It's if  
6 the sales tax falls below. But I may have  
7 misunderstood him. It's inclusive.

8 MR. BROWN: Say that again.

9 MR. STRONG: No. The surtax is separate  
10 from the minimum required city contribution.

11 MR. GREIVE: That's correct.

12 MR. SCHEU: So you-all have to make a  
13 minimum required contribution in addition to the  
14 sales tax?

15 MR. GREIVE: The sales tax -- and Pete can  
16 explain this. But through the Chair, the way we  
17 did our modeling -- and, Pete, correct me if you  
18 did it differently -- but because we're  
19 reflecting the sales tax as an asset in the funds  
20 today, it's owned by the funds.

21 So when it starts coming in, it's just a  
22 straight transfer of the funds. So the ADEC and,  
23 you know, this minimum that we're discussing, the  
24 ADEC and the minimum are inclusive, you know.  
25 But the surtax is separate. You guys just get

1           that.

2           MR. STRONG: Right. It's like -- it's like  
3           a dividend on an asset. So the present value of  
4           that will start decreasing as money starts coming  
5           in. So it's like a payment on that asset that  
6           you're holding on the books. And so it's not  
7           treated as an employer contribution when it comes  
8           in.

9           MR. SCHEU: So let's say the sales tax  
10          revenue in 2034 is a hundred million dollars. We  
11          will actually get that in cash, but we'll also  
12          get whatever the ADEC is for in addition to that.

13          MR. GREIVE: Yeah.

14          MR. STRONG: Right.

15          MR. SCHEU: Okay. So that would be -- that  
16          would be 100 plus 110. That's \$210 million.

17          MR. STRONG: Right.

18          MR. SCHEU: Okay. I was confused, then, the  
19          other day when Mike Weinstein made that  
20          presentation. Okay. Thank you.

21          DIRECTOR JOHNSON: All right.

22          So that concludes my report. I'll answer  
23          any questions you have.

24          (No responses.)

25          DIRECTOR JOHNSON: I'll turn it back over to

1 the Chairman.

2 CHAIRMAN TUTEN: Where we at?

3 DIRECTOR JOHNSON: We're at the Counsel  
4 Reports. We've got -- Bob Sugarman is on the  
5 phone. Obviously Pete Strong is on the phone.

6 Bob, would you mind introducing Maya and  
7 setting up the DaVita Securities litigation  
8 matter?

9 MR. SUGARMAN: I'll be happy to do so.

10 Trustees, this is the first time that I've  
11 talked to you about securities litigation in the  
12 short time that I've been on board. So let me  
13 tell you what we're working on and what we're  
14 going to do here.

15 What we're working on is an overall  
16 securities litigation policy that Pedro and I are  
17 drafting. We'll send it to Tim for his review  
18 and then have it for you maybe at the next  
19 meeting or the one after that.

20 But your prior policy is still in effect,  
21 and that is that the law firms that you have  
22 selected monitor your portfolio and bring to your  
23 attention cases that they think are worthy of you  
24 participating in.

25 Remember, part of our corporate governance

1 responsibility is to look after the companies in  
2 which we've invested and make sure that they're  
3 treating us as their shareholders fairly.

4 By the way, this is the design of the  
5 federal law, as Maya will be able to explain to  
6 you more. But institutional shareholders are  
7 given the job of policing the market together  
8 with the SEC.

9 In this country, securities law enforcement  
10 is a public and a private endeavor. Neither --  
11 the privates don't have the assets -- don't have  
12 the power for the criminal prosecutions that the  
13 SEC can bring or the large funds. The SEC  
14 doesn't have the manpower to bring the number of  
15 suits that are necessary to bring things to  
16 light.

17 So your firm, Saxena White, who we've worked  
18 with for many years and whose founding and named  
19 partner, Maya Saxena, is with you today, has  
20 identified a firm called DaVita. And she'll tell  
21 you why that firm has been identified, what they  
22 did wrong, how much you lost, and why Saxena  
23 White recommended to your executive director to  
24 seek lead plaintiff status in this case.

25 Generally speaking, this type of loss that

1           you've suffered here, about a quarter of a  
2           million dollars, is somewhat lower than that  
3           which would normally come to your attention for a  
4           fund of your size. However, this is a smaller  
5           company. And as Maya will tell you, it doesn't  
6           have a lot of shareholders compared to others.

7           So it's likely that the task of keeping the  
8           company honest, so to speak, would fall to  
9           someone who had a smaller loss than we would if  
10          it was a much bigger company. Maya will tell you  
11          why this loss, in her view, merits your  
12          attention.

13          So the action we're looking for,  
14          Mr. Chairman, is a motion to ratify Tim's  
15          decision to seek lead plaintiff status in this  
16          case. If the motion passes, then Saxena White's  
17          work will proceed, and Tim has signed a contract  
18          with them, with the understanding that if the  
19          motion fails, that Saxena White will withdraw our  
20          motion to serve as lead plaintiff.

21          My advice to you is to follow the advice of  
22          your lawyer. You hired specialized lawyers for  
23          this, and Saxena White is well known in the field  
24          and has been with you for awhile.

25          Now, if this case proceeds, we're going to

1           need to do some work locally. And we -- so we  
2           would be your local counsel. These cases work on  
3           a contingency basis.

4           If the case is settled or won that results  
5           in a monetary recovery to the plaintiffs, then  
6           the court approves an attorney's fee that's paid  
7           to the plaintiff's lawyer. Only a court-approved  
8           fee can be paid. And that goes to the  
9           plaintiff's lawyer usually out of the money  
10          that's awarded to the class.

11          And if no recovery is obtained or no success  
12          is had, then the lawyers have worked for free.  
13          That's the nature of a contingency case. On some  
14          of these cases we get paid; on some of them we  
15          don't.

16          So we will be serving as your local counsel,  
17          performing tasks that are necessary on our end to  
18          do -- to proceed with the case, which is working  
19          with the pension staff on discovery, getting the  
20          right documents, being with you in case there's  
21          any depositions taken of any of the trustees, and  
22          reviewing the pleadings, reviewing -- having  
23          input on any settlement or mediation.

24          And we will be compensated for that if there  
25          is a recovery out of Saxena White's fee, not out

1 of anything that you get. In other words, if we  
2 don't get compensated, they get more money. It  
3 comes strictly out of their court-approved fee,  
4 and that amount that we would get is 10 percent.  
5 I'm telling you now it's 10 percent. It's in the  
6 contract that it's 10 percent. And should we  
7 obtain any money, I will tell you then how much  
8 we obtain. This is full disclosure and full  
9 transparency in the way that we work.

10 We have not selected Saxena White for your  
11 fund, nor did we recommend to them that they come  
12 to you with this case. This is entirely on their  
13 initiative. And as I will explain to you when we  
14 talk about the securities policy, our firm does  
15 not act as a gatekeeper. That might have been  
16 different with your prior firm. But we don't --  
17 we're not a gatekeeper.

18 So unless there's any questions about what  
19 I've had to say, my recommendation, Mr. Chairman,  
20 is that you call Maya up to the table and let her  
21 present the case to you.

22 At this point what's happened is a written  
23 case review, case summary, has been presented to  
24 your executive director along with a telephone  
25 conversation with the lawyers, Pedro from my

1 office and Maya, so that he was personally  
2 briefed on the case.

3 And has the conversation with the  
4 coplaintiff taken place yet?

5 MS. SAXENA: Yes, it has, Bob.

6 MR. SUGARMAN: Okay. So we have a  
7 coplaintiff in this case. So Tim has also spoken  
8 to them, and it worked out that we're going to  
9 work together.

10 So far all the due diligence has been done.  
11 It's important that these steps are done. We  
12 just don't take cases because lawyers say so. We  
13 independently evaluate them through our own  
14 process, and we talk to their proposed  
15 coplaintiff to see if it's a suitable match for  
16 us.

17 So at this point, Mr. Chairman, we should  
18 ask Maya to come to the table, and at the  
19 conclusion of her presentation, ask for a motion  
20 to either ratify or not to ratify Tim's interim  
21 decision to participate as lead plaintiff in the  
22 case.

23 MS. SAXENA: I think I came up a little  
24 earlier, so you can tell me to sit down and I'll  
25 come back.

1 (Laughter)

2 MR. SUGARMAN: I couldn't hear that. If you  
3 could put Maya up at the table, that's good.

4 MS. SAXENA: Sorry, Bob. Hi. I'm already  
5 up here. I just told Tim if he wants me to, I  
6 can sit down and then come back up.

7 DIRECTOR JOHNSON: No, Maya. Good morning  
8 and welcome. And speak up, if you don't mind so  
9 that our reporter can grab every word.

10 MS. SAXENA: Sure.

11 DIRECTOR JOHNSON: So we're ready for you.  
12 Go right ahead.

13 MS. SAXENA: Well, thank you. And, Bob,  
14 thank you for the introduction.

15 As Bob mentioned, we've been one of your  
16 securities litigation monitoring firms for a few  
17 years now. And basically what that means is that  
18 we review all of your equity trades, and in the  
19 event that there's fraud, we alert you.

20 Now, our philosophy about these types of  
21 cases is a conservative one. We think that when  
22 you're accusing public executives of committing  
23 fraud, you'd better have a darn good case. And  
24 the pleading thresholds in these types of cases  
25 are difficult.

1           So in the time that we've been working with  
2           you, which I believe has been at least a few  
3           years now, we've never been in the position of  
4           actually recommending you get actively involved  
5           in a case. And that's for a few reasons.

6           It could be that your loss was too small or,  
7           more often than not, we just didn't like the  
8           merits of the case. We didn't really see a fraud  
9           situation as opposed to a regular stock price  
10          fraud.

11          So what makes this situation a little bit  
12          different is you have a loss of around 290,000,  
13          which as Bob mentioned, is a little bit on the  
14          low side that we would generally recommend in  
15          these types of situations.

16          The reason that we recommended it here is  
17          because you, as well as the Georgia Peace  
18          Officers Fund, who is the other fund involved in  
19          the case, happened to be the only public pension  
20          funds that bought the stock during the class  
21          period.

22          We know that now because the lead plaintiff  
23          motion was filed, which is what we're seeking to  
24          have ratified here today, and nobody else moved  
25          for appointment as lead plaintiff.

1           So what the data shows pretty overwhelming  
2 now is that when public funds are involved in  
3 these types of cases, the recoveries are  
4 significantly higher. It can be as much as a  
5 third higher than when you have an individual  
6 investor involved in these type of cases.

7           So in our view over the years that we've  
8 been working with you, we felt that this was one  
9 of those relatively rare circumstances where your  
10 getting more actively involved would actually  
11 maximize a plan asset. So, you know, in a  
12 nutshell, that's why we came to you with this  
13 amount of loss.

14           I'll tell you a little bit about the case  
15 and then I'll tell you the next steps and then  
16 I'll sit down.

17           But the case is about a situation that  
18 DaVita -- and DaVita is a big, nationwide  
19 provider of dialysis and other kidney services.

20           What they were doing during this class  
21 period, which runs for about a year and a half,  
22 is they would encourage a lot of their patients  
23 who were on Medicaid and Medicare to actually go  
24 out and seek private insurance.

25           And the reason that when were encouraged to

1 seek this private insurance was because the  
2 reimbursement rates are much, much higher.  
3 You're talking about \$300 for Medicaid versus  
4 around 4- or \$5,000 for a private insurance  
5 reimbursement.

6 So obviously most of these people couldn't  
7 afford the premiums on private insurance, and  
8 what DaVita actually is alleged to have done is  
9 through a nonprofit entity called the American  
10 Kidney Foundation, they made donations to this  
11 nonprofit foundation which turned around and paid  
12 the premiums for all these people who couldn't  
13 otherwise afford the private insurance.

14 So when you have these types of situations,  
15 invariably you have the government knocking on  
16 your door. And what happened was, first, the  
17 Medicaid investigative agencies came and started  
18 inquiring as to what was going on, and then the  
19 Department of Justice got involved and is now  
20 investigating the company.

21 So on the merits, we like this case. We  
22 think it's going to get over a motion to dismiss,  
23 which is the next big step in the case. And we  
24 do recommend that you continue with it for the  
25 reasons already stated.

1           Next steps, in a nutshell. The motion for  
2           lead plaintiff was already filed, as I mentioned.  
3           Our motion was the only motion that was put on  
4           file. There were no other funds or even  
5           individuals that came forward that were willing  
6           to lead the case.

7           The next thing that we do, we continue our  
8           investigation. We file an amended complaint, and  
9           we -- defendant's file a motion to dismiss  
10          basically saying we have no case, and we oppose  
11          that. So there's a delay. You know, these cases  
12          do run for a long time. They often take a few  
13          years to resolve.

14          And in the beginning part of the case, I'd  
15          say for a good six to nine months, there's really  
16          not a whole lot going on. All you would be  
17          hearing from us are updates through  
18          Mr. Sugarman's office and letters to the Board,  
19          just letting you know what's going on. And then,  
20          you know, eventually if we get over the motion to  
21          dismiss, we'd have a little bit more activity and  
22          discovery picking up.

23          So that's really it. I'm certainly open to  
24          questions.

25          MR. BROWN: I make a motion that we ratify

1 the director's decision to be lead plaintiff in  
2 the case.

3 MR. PAYNE: Second.

4 MR. PATSY: I have a question.

5 MS. SAXENA: Sure.

6 MR. PATSY: You state in here the Department  
7 of Justice is investigating.

8 MS. SAXENA: That's correct.

9 MR. PATSY: Can you talk us through what  
10 could happen if the Department of Justice  
11 proceeds? Does the company goes out business?  
12 Any likelihood of that?

13 MS. SAXENA: I don't think that's a real  
14 significant likelihood, Mr. Patsy. And I say  
15 that because this is a multiple billion-dollar  
16 company and they've already been forced to  
17 discontinue the relationship with this nonprofit  
18 entity, which has had an impact on their  
19 revenues.

20 I think they're going to be able to  
21 withstand that. I'm not a money manager and,  
22 obviously, I can't predict. But I do think it's  
23 going to take a cut out of their business because  
24 this improper arrangement certainly funneled more  
25 money their way. But I think it would be

1 probably not the type of situation that  
2 completely destroys the company.

3 I mean, unfortunately, in most of the public  
4 enforcement situations you see these days, there  
5 are perhaps multi-million-dollar fines. But I  
6 haven't seen anything extremely significant with  
7 respect to any of the healthcare companies yet,  
8 for better or worse.

9 MR. PATSY: Okay. Second question.

10 If they are pushed into bankruptcy as a  
11 results of this, as the lead plaintiff, do we  
12 have any special benefits in bankruptcy court  
13 with these guys, or are we just, you know, an  
14 equity holder and we just get in line?

15 MS. SAXENA: Unfortunately, you're in the  
16 same situation as most other shareholders. So it  
17 would not look good.

18 But, you know, from what I've seen of this  
19 company, they do have a pretty recurring base of  
20 revenue from actually providing the legitimate  
21 portion of their dialysis services. They do have  
22 a lot of competitors. But I don't know that that  
23 is something that is foreseen.

24 And as the litigation progresses, we would  
25 certainly be updating you on the status of the

1 government investigation as well so you would be  
2 very, you know, attuned to what was happening  
3 there and could always make decisions on that.

4 CHAIRMAN TUTEN: Okay. We have a motion.  
5 Do we have a second?

6 MR. SCHEU: I think he did, Willard did.  
7 I have a question.

8 CHAIRMAN TUTEN: Willard, did you second?

9 MR. PAYNE: Yes.

10 CHAIRMAN TUTEN: Okay. We have a motion and  
11 a second. Now a question from Mr. Scheu.

12 MR. SCHEU: This is really for Bob.

13 When we talked about our securities  
14 litigation policy as it related to our local  
15 counsel, and Bob has said that they would -- if  
16 there were a recovery, that Saxena White would  
17 receive a court-ordered fee and they would  
18 receive 10 percent of it on a contingency basis.

19 I thought we had discussed, and maybe we  
20 didn't resolve it, that two -- that we hoped that  
21 as to our local counsel, that if the 10  
22 percent -- if the contingency fee exceeded the  
23 normal hourly rate charged to us, that we would  
24 seek a credit back against the fees that we paid.

25 Now, that may be my imagination, but I

1 thought we had discussed that. And I wonder if  
2 Bob would be willing to have that kind of  
3 relationship.

4 DIRECTOR JOHNSON: I can handle the first  
5 part of it. Bob, do you want to go first or does  
6 it matter?

7 MR. SUGARMAN: Yes, I can comment on that.

8 Such an arrangement would essentially, Bill,  
9 be a fee rebate. And I checked with the Bar when  
10 I first got involved in this type of work with  
11 our clients, and they told me that rebating fees  
12 to clients is forbidden.

13 What I can tell you is that when we  
14 re-evaluate our hourly fees, and I don't remember  
15 how long our fee arrangement is for, what we're  
16 ethically permitted to do is to take into  
17 consideration all of the revenue that we derive  
18 from a client in setting our hourly fees.

19 MR. SCHEU: Okay.

20 MR. SUGARMAN: And that's what we do. And  
21 we explain to you in that case. But we can't  
22 rebate fees, but we can consider them in setting  
23 our rates.

24 MR. SCHEU: Thank you.

25 CHAIRMAN TUTEN: And, Bob, just to clarify.

1           The cost to the pension fund and the Board  
2           if we don't win -- win or lose, it's still going  
3           to be zero? Is that what it's going to be?

4           MS. SAXENA: Yeah. I can answer that,  
5           Lieutenant.

6           MR. SUGARMAN: Yes.

7           MS. SAXENA: It's completely contingent,  
8           which means that we pay all the costs up front.  
9           If we have to hire experts, we pay for that.  
10          Anything attendant to the litigation we will  
11          cover.

12          And in the event we lose, which I hope is  
13          unlikely -- you know, our firm has a pretty much  
14          99 percent success rate, largely, I think,  
15          because of our conservative approach -- you know,  
16          that's money we eat. So, you know, one few pair  
17          less of shoes for me this year.

18          CHAIRMAN TUTEN: That's fine. Just double  
19          checking.

20          MR. SUGARMAN: I didn't hear the last.

21          MS. SAXENA: I just made a joke about shoes,  
22          Bob. I said I'll get one pair less shoes if we  
23          lose.

24          (Laughter)

25          MR. SUGARMAN: All right.

1           What we will do, however, Mr. Chairman, is  
2           in our new policy and in this case, is ask our  
3           pension staff to keep track of the hours that  
4           they spend in responding to discovery requests,  
5           in reviewing the case reports, and deposition or  
6           other things, because we can seek reimbursement  
7           of those amounts back to the fund on an actual  
8           cost basis.

9           CHAIRMAN TUTEN: Right. Okay. Well, good.

10          MS. SAXENA: And that would be any staff  
11          time. So if you have someone who has to make  
12          copies. It's usually quite minimal, but Bob is  
13          absolutely right. You should keep track of that,  
14          and in the end of the case, we make an  
15          application to the Court and submit those hours  
16          for the Court's approval.

17          CHAIRMAN TUTEN: Perfect. All right.

18          We have a motion and a second. We've done  
19          the questioning. Any further questions?

20          MR. PATSY: No. But I've got a comment.

21          CHAIRMAN TUTEN: Comment.

22          MR. PATSY: I mean, I think all of you know  
23          I don't normally support securities litigation  
24          cases. But in this one --

25          CHAIRMAN TUTEN: It's criminal.

1 MR. PATSY: -- I'm all over it. So I would  
2 support this wholeheartedly.

3 MS. SAXENA: It's a unique situation. I  
4 agree with you.

5 CHAIRMAN TUTEN: All right. Hey, if they  
6 took any amount of money from us, I'm willing to  
7 go get it. I don't care how much it is.

8 MR. BROWN: Absolutely.

9 CHAIRMAN TUTEN: All righty. We have a --  
10 all in favor?

11 (Responses of "aye.")

12 CHAIRMAN TUTEN: Any opposed?

13 (No responses.)

14 CHAIRMAN TUTEN: There you go.

15 DIRECTOR JOHNSON: Through the Chair, can I  
16 make a comment?

17 And, thank you, Maya. Great job.

18 MS. SAXENA: Oh, thank you. Pleasure to  
19 meet you in person finally.

20 DIRECTOR JOHNSON: Yeah, after several  
21 conversations by phone.

22 MS. SAXENA: Exactly.

23 DIRECTOR JOHNSON: So, just so we remember  
24 how this kind of dovetails, we put together an  
25 annual cycle of work for this Board. And one of

1 the items on that annual cycle of work was a  
2 policy relative to securities monitoring and  
3 litigation.

4 We haven't gotten to that policy yet because  
5 we've been focused on pension reform. It's kind  
6 of changed our agenda of activity for this year.  
7 But we're going to get back to it.

8 So these questions, Bill, we did talk  
9 about --

10 MR. SCHEU: Right.

11 DIRECTOR JOHNSON: -- but they've never been  
12 resolved.

13 MR. SCHEU: Okay.

14 DIRECTOR JOHNSON: Bob Sugarman is working  
15 on that policy. He and I are working very  
16 closely together, and these questions are part of  
17 it.

18 MR. SCHEU: Okay.

19 DIRECTOR JOHNSON: I would like to have the  
20 policy in place so that we don't have to reinvent  
21 the wheel every time an opportunity like this  
22 comes about if the Board has policies that I can  
23 administer that you've ratified.

24 And in this case, the Board rules give me  
25 the authority to make a decision before a Board

1 meeting, because we had a deadline. If the  
2 deadline had been after the Board meeting, I  
3 wouldn't have gotten involved. We would have  
4 brought this to the Board and you would have made  
5 the decision going forward.

6 So I don't want you to be discouraged.  
7 We're going to get to it, but the timing of this  
8 case, the deadline that was involved, and the  
9 fact that we've been distracted by pension reform  
10 is the reason why we haven't gotten to that  
11 policy yet, but we're going to get to it.

12 MR. BROWN: Rick has been anxiously awaiting  
13 that.

14 (Laughter)

15 MR. PATSY: All right. I do have a question  
16 now that you brought it up, Tim.

17 DIRECTOR JOHNSON: Oh, Lord.

18 MR. PATSY: If we delegate that authority to  
19 you --

20 DIRECTOR JOHNSON: Yes.

21 MR. PATSY: -- and you proceed and then we  
22 come back to the Board meeting and you inform us  
23 of what you've done, and we say no, do we have  
24 the right -- do we as an entity have the right to  
25 go back and withdraw?

1           DIRECTOR JOHNSON: Yeah, that's right. And  
2 Bob mentioned it. So my -- my approval was  
3 contingent on the ratification of this Board.

4           MR. PATSY: All right. That's good.

5           MR. SUGARMAN: Yeah, that's our firm  
6 response. We make it clear to the firms that  
7 their proceeding and filing the motion is  
8 contingent upon Board approval, and they agree to  
9 promptly withdraw it if that doesn't happen.

10          MR. PATSY: All right. Good.

11          CHAIRMAN TUTEN: Okay. We have Old  
12 Business.

13                 Do you want to get done with this real  
14 quick, Tim, and then take a break for the  
15 advisory meeting?

16          DIRECTOR JOHNSON: Yes, we should.  
17 Unless -- I'm sorry. I'm sorry. Two things,  
18 through the Chair.

19                 Lawsikia Hodges is our counsel  
20 representative on this Board from the Office of  
21 General Counsel. She was at the head table at  
22 our last meeting. I don't know that I properly  
23 introduced her. So I want to formally introduce  
24 Lawsikia to all the members of the Board.

25                 Lawsikia Hodges.

1 MS. HODGES: Hello.

2 DIRECTOR JOHNSON: Lawsikia has a resolution  
3 that we'd like to put before the Board relative  
4 to personnel action. She can give you a little  
5 bit of background on it. I'd like to get a vote  
6 on that.

7 And then Stephen Lundy can give you  
8 background on these Old Business actions items.  
9 Thank you.

10 MS. HODGES: Well, good morning.

11 TRUSTEES: Good morning.

12 MS. HODGES: And thank you for introducing  
13 me.

14 So we have a resolution before you, and it's  
15 essentially just having the Board delegate to  
16 your executive director the ability to take  
17 certain employment actions when it comes to, you  
18 know, disciplinary actions and things of that  
19 sort.

20 This is very consistent with other  
21 independent authorities in our consolidated  
22 government: JAA, JEA, JTA. All their executive  
23 directors have this ability to take this action.

24 And so we've crafted a simple resolution  
25 that states, "Notwithstanding any prior rule,

1 regulation or policy set by the Board, that the  
2 Board hereby delegates to the executive  
3 director-administrator the power to investigate  
4 and discipline employees of the Board, up to and  
5 including termination, should the executive  
6 director, in his or her judgment, after  
7 consulting what the Office of General Counsel,  
8 believe that such action is in the best interest  
9 of the Board."

10 So, if we could get a motion. And,  
11 Mr. Chair, if you could, when we're taking action  
12 on this item, since it wasn't identified in your  
13 agenda, if you could just quickly open it up for  
14 public comment, that would be great.

15 MR. SCHEU: I'll make the motion.

16 MR. PATSY: I'll second it.

17 MR. BROWN: Okay. Question.

18 CHAIRMAN TUTEN: Question.

19 MR. BROWN: So when it comes to civil  
20 service protection for those who have it, all of  
21 those -- all those protections are in order.  
22 There would be one person making a decision, but  
23 then all the appellate rights normally afforded  
24 to a civil service employee are in effect. It  
25 doesn't change any of that, correct?

1 MS. HODGES: Right. And through the Chair,  
2 actually, your PFPF employees are appointed  
3 employees. So they are not part of a bargaining  
4 unit. They don't have civil service rights.

5 You may have employees that may have started  
6 out in city government, okay, and so they're just  
7 here, you know, serving their time under your  
8 domain, but your charter is pretty clear that all  
9 of your employees serve at your pleasure.

10 So if certain employees that started out  
11 with the city had civil service, they would  
12 still, you know, be in place.

13 And that's really the reason for including  
14 the language that Tim consult with our office.  
15 Also, city HR is very useful. We have, of  
16 course, a labor and employment deputy in our  
17 office and we would guide him through that  
18 process.

19 MR. BROWN: And any appeal of his decision,  
20 if it's an at-will employee, there is no such  
21 appeal. But when we speak of somebody who does  
22 have civil service protection in their previous  
23 role, any appeal of his decision would go through  
24 the standard civil service board, those types of  
25 options?

1 MS. HODGES: Right. And so, through the  
2 Chair, you actually -- and I had this discussion  
3 with one of the trustees -- you have policies in  
4 place, of course, that you can set. And pursuant  
5 to those policies, I want to say maybe it was  
6 earlier this year, sometime around the time that  
7 Beth was here, you amended that employment  
8 policy, for example.

9 It included some procedures that would  
10 allow, if employment action was taken by this  
11 Board, for current employees to be able to  
12 utilize that policy, that, for example, would  
13 still be in place. All right?

14 So action would be taken and employees would  
15 still be able to utilize whatever rights are  
16 available out there, and pursuant to that  
17 policy -- would be a penalty to this Board.

18 That, of course, is your own rules that  
19 you're setting different from any civil service  
20 rules. That's another set of rules --

21 MR. BROWN: Sure. I got it.

22 MS. HODGES: -- that they -- that they  
23 wouldn't go away and they would still have that  
24 if that employee was subject to that.

25 MR. BROWN: So, in essence, the director

1 takes over the role of implementing discipline in  
2 lieu of the Board?

3 MS. HODGES: Right. Exactly.

4 CHAIRMAN TUTEN: All right. We have a  
5 motion and a second. Any further questions?

6 (No responses.)

7 CHAIRMAN TUTEN: All in favor?

8 (Responses of "aye.")

9 CHAIRMAN TUTEN: Any opposed?

10 (No responses.)

11 MR. SUGARMAN: Mr. Chairman, let me tell you  
12 how lucky you are to have Lawsikia at the table  
13 because she's not a 9-to-5 government lawyer, as  
14 I found out last evening when we started emailing  
15 each other at 7 and 8 o'clock, and she was kind  
16 enough to send that over to me to take a look at.

17 DIRECTOR JOHNSON: All right. Thank  
18 you-all.

19 Let's go to item VIII. You'll see under Old  
20 Business, Board action is requested for three  
21 applicants: David Gray, John Hill, and Airaka  
22 Ramsey. You'll see the footnote that these were  
23 previously approved under trustee Rule 13.3 and  
24 now they've been amended and cleared.

25 These, if I'm not mistaken, Stephen, are

1 medical clearances?

2 MR. LUNDY: Yes.

3 DIRECTOR JOHNSON: Would you mind -- if you  
4 have questions about them, Stephen can answer  
5 them.

6 CHAIRMAN TUTEN: Well, I don't personally,  
7 but I understand what's going on. If anybody  
8 else does, they can ask Steve.

9 These are people cleared for retirement,  
10 correct? Medical disqualification, for whatever  
11 reasons.

12 MR. LUNDY: Yes.

13 CHAIRMAN TUTEN: They've been inspected by  
14 the advisory committee and the medical director  
15 and all that good stuff?

16 MR. LUNDY: Yes. Whenever they were  
17 approved by the Board, they were pendings. So  
18 they still had some time to get a second  
19 reevaluation done. So they got that, and then  
20 they're medically cleared by the medical  
21 director.

22 CHAIRMAN TUTEN: Got it. So there's no  
23 question from anybody down the food chain, here  
24 it is right now, and we basically vote on  
25 approving it.

1 MR. SCHEU: Can we consolidate all three of  
2 them into one motion?

3 CHAIRMAN TUTEN: Yeah. That would be great.

4 MR. SCHEU: So moved.

5 MR. BROWN: Second.

6 CHAIRMAN TUTEN: We got that, motion to  
7 accept all three application for membership. We  
8 have a second.

9 MR. PATSY: I'll second it. And I have a  
10 comment. What do you mean "down the food chain"?  
11 Does that mean like the rest of us --

12 CHAIRMAN TUTEN: Appreciate the set up, but  
13 we're up here, and then you've got the advisory  
14 committee, medical director, although once -- in  
15 other words, it comes up to us.

16 MR. PATSY: Right. Got you.

17 CHAIRMAN TUTEN: So, yes, we're the end of  
18 the road for these people to get cleared.

19 MR. PATSY: I'm getting no slack.

20 CHAIRMAN TUTEN: All righty then. We have  
21 comments?

22 (No responses.)

23 CHAIRMAN TUTEN: All in favor?

24 (Responses of "aye.")

25 CHAIRMAN TUTEN: Any opposed?

1 (No responses.)

2 CHAIRMAN TUTEN: Perfect.

3 DIRECTOR JOHNSON: Excellent, excellent.

4 So for the record, I want to make sure I'm  
5 clear. Who approved and who second this motion?

6 MR. BROWN: I seconded it first --

7 MR. SCHEU: I think I made the motion.

8 CHAIRMAN TUTEN: I think it was Bill first,  
9 Rick second.

10 DIRECTOR JOHNSON: Bill first, Rick second.  
11 Very good. We're ready to take a break,  
12 Mr. Chair.

13 CHAIRMAN TUTEN: Sure.

14 DIRECTOR JOHNSON: Five minutes, and we can  
15 resume with the FIAC.

16 MR. BROWN: I'm sorry. Can I -- are we  
17 still on New Business? Can I make a motion?

18 And Steve Durden isn't here. I have had a  
19 number of police officers approach me about  
20 wanting to get an explanation as to why they  
21 cannot buy their time back. They were full-time  
22 bailiffs.

23 Conversation with Steve, says he thinks they  
24 can. He just needs to dig around and do a little  
25 bit more research, but he thinks it's akin to the

1 community service officers. We just need a  
2 decision so that they know whether they can buy  
3 their time back or not.

4 My motion would be to ask Steve Durden to  
5 get an explanation and see if it is comparable to  
6 the community service officers.

7 CHAIRMAN TUTEN: Are they CSOs trying to  
8 connect their time?

9 MR. BROWN: No. These are bailiffs that  
10 were full time. They were told initially by the  
11 city they can't buy their time back because they  
12 participated in Social Security. Steve Durden  
13 says that's not correct.

14 So they're getting conflicting information  
15 when they go to buy their time back. We just  
16 need to know what they're able to buy back and  
17 what they're not able to buy back. We just need  
18 a definitive decision so they know what they can  
19 and cannot do.

20 I think they're getting bad information from  
21 some people that maybe aren't in the loop. So my  
22 motion would be to have general counsel give us a  
23 decision, you know, to sum it up.

24 MR. SUGARMAN: Chris, are bailiffs certified  
25 law enforcement officers?

1 MR. BROWN: Some of them are, some of them  
2 aren't. We have two classes of bailiffs. Some  
3 of them are sworn law enforcement. Those are  
4 known as judicial officers. Some are not. Those  
5 are known as temporary sworn bailiffs.

6 MR. SUGARMAN: Okay.

7 MR. BROWN: But as Steve said, even the  
8 ones that aren't sworn, they work full-time,  
9 then the same -- they fall into that same  
10 explanation that the community service officers  
11 did. Even though they were not considered  
12 full-time, they worked 40-hour weeks year after  
13 year after year. Therefore, the general counsel  
14 decided they were allowed to buy their time back  
15 into the fund.

16 We just need the same kind of decision made  
17 for these bailiffs, you know. Whether it's in  
18 favor of them or not, we just need some  
19 information. And he said he could be able to  
20 figure that out fairly quickly.

21 CHAIRMAN TUTEN: 10-4. So you're making a  
22 motion that we run this over to Steve --

23 MR. BROWN: Yeah. He just provide us an  
24 explanation at our next Board meeting.

25 MS. HODGES: Through the Chair, you actually

1 don't need a motion for that. He's in my office.  
2 He's my colleague --

3 MR. BROWN: Perfect.

4 MS. HODGES: I'm happy to go back and have  
5 that conversation and make sure you have an  
6 answer by the next meeting.

7 MR. SCHEU: And a motion like that, it  
8 should be OGC, not a particular one because --

9 MR. BROWN: Fair enough.

10 MR. SCHEU: -- whoever that is, it may not  
11 be -- Steve may die.

12 MR. BROWN: That is correct. He may die.  
13 That is very morbid, but yes.

14 So if we don't need a motion, then, that  
15 would be great.

16 MS. HODGES: Yeah. We don't. I'll handle  
17 it.

18 CHAIRMAN TUTEN: Okay. We've got to take a  
19 break. We're supposed to start interviews at  
20 10:30. That's 20 minutes. Is the FIAC committee  
21 going to be done in time?

22 DIRECTOR JOHNSON: They are here, and if we  
23 could start sooner, that would be great.

24 We have Craig Lewis who is going to chair  
25 the FIAC, and he's on a time deadline and Bill's

1 on a deadline. He'd like to participate as much  
2 as he could.

3 CHAIRMAN TUTEN: Well, I know, because we  
4 have Dan after them.

5 We're going to come back and just before we  
6 get to that part, Dan, let's start off with what  
7 we need to do, Silchester, and then all the rest,  
8 if we get to it, because I want to start these  
9 things at 10:30 sharp for these people that are  
10 waiting to be interviewed.

11 So the economic report, all that other  
12 stuff, if we don't get to it, you can read it at  
13 the house. Perfect.

14 MR. PATSY: Yeah, we need a break.

15 THE COURT: All righty. Take a break.

16 MR. STRONG: Hey, Steve, I'm signing off.

17 DIRECTOR JOHNSON: Thanks, Pete. Take care.

18 (A break was taken; thereafter the following  
19 meeting continued as follows:)

20 CHAIRMAN TUTEN: All right. Meeting back to  
21 order.

22 DIRECTOR JOHNSON: Thank you. The meeting  
23 has been called to order by the chairman.

24 Today, substituting for Brian Smith, is  
25 Craig Lewis. He's going to be chairing the FIAC,

1 but we don't have a member.

2 MR. LEWIS: We do not have a quorum.

3 DIRECTOR JOHNSON: I apologize. You don't  
4 have a quorum yet. I'll tell you what, maybe  
5 we'll have one by the time we get through Dan's  
6 reports, and then you can call that meeting to  
7 order at that time.

8 So we'll start off with Dan, and then we'll  
9 come back to the FIAC.

10 Through the Chair, can I introduce Dan  
11 Holmes?

12 CHAIRMAN TUTEN: Dan, as we discussed  
13 before, start from important to whatever.

14 MR. HOLMES: Okay. So the most important  
15 thing is my recommendation pursuant to my memo  
16 with regard to the additional contribution of  
17 Silchester.

18 As you'll recall, there was -- when we  
19 originally hired Silchester, there was a cue to  
20 make the full contribution, but partial  
21 contribution was made. The remaining  
22 contribution was put in the index fund.

23 We got a call. We received notice last week  
24 that there was a small opening available for the  
25 remaining allocation that would bring us up to

1 the target, and that's \$65 million.

2 So my recommendation to the Board is to move  
3 \$65 million from the EAFE index fund in order to  
4 fund Silchester. And that wire needs to be done  
5 by April 26th.

6 MR. PATSY: I'll make that motion.

7 CHAIRMAN TUTEN: Got a motion --

8 MR. BROWN: Second it.

9 CHAIRMAN TUTEN: -- and a second. Any  
10 questions, comments?

11 (No response.)

12 CHAIRMAN TUTEN: And that will take place as  
13 soon as possible, Dan?

14 MR. HOLMES: Yeah. I've already given staff  
15 the wiring instructions.

16 CHAIRMAN TUTEN: All righty then. All in  
17 favor?

18 (Responses of "aye.")

19 CHAIRMAN TUTEN: Any opposed?

20 (No responses.)

21 CHAIRMAN TUTEN: There you go, Dan.

22 MR. HOLMES: Thank you.

23 Given the time constraints, I'm going to  
24 skip the Economic and Capital Market Report.  
25 There is a preliminary Flash Report for the

1 quarter in the port -- or in the book. Some  
2 quick highlights and then we'll move on.

3 With regard to highlights, first of all,  
4 market value at the end of the quarter was  
5 approximately 1.86 billion. I believe that's the  
6 largest market value that the PFPF has ever had.  
7 And, Steve, Joey, you guys can correct me if I'm  
8 wrong.

9 The total fund for the quarter returned 5.7  
10 percent on a gross basis and 5.6 percent on a net  
11 basis. For the fiscal year-to-date on a net  
12 basis, the total fund is up 6.6 percent.

13 Some of the lead contributors over the  
14 course of the quarter was, first of all,  
15 International Equities up 11 percent. That was  
16 driven primarily by Emerging Markets, which were  
17 up over 14 percent in the portfolio.

18 US Equities were up almost 7 percent, and  
19 then MLPs up almost 5 percent.

20 A couple of issues of note. First of all,  
21 for the quarter, all the asset class composites  
22 outperformed the benchmarks on a gross- and  
23 net-of-fees basis. All the managers outperformed  
24 the benchmarks on a gross- and net-of-fee basis  
25 as well.

1           Number of come-backs in terms of performance  
2 with regard to managers that we're watching,  
3 including Eagle, Pinnacle.

4           And that's really about it. I won't go into  
5 any further detail because we're pressed for  
6 time. Any questions?

7           DIRECTOR JOHNSON: Will there be an  
8 additional quarter end report in April?

9           MR. HOLMES: Yes. The full quarterly report  
10 will be available in a couple weeks, the first  
11 week of -- the first week of May is when it's  
12 scheduled to be published. That's when the  
13 universe is set. So you'll have the full  
14 quarterly report in time for the Board meeting.

15           Depending on the universe set, it might be a  
16 little hard processing the full quarterly report  
17 for the FIAC meeting, but we're going to try to  
18 do our best.

19           DIRECTOR JOHNSON: All right.

20           Through the Chair, I don't remember whether  
21 this question was asked. But did Maya disclose  
22 what manager held the DaVita stock?

23           MR. HOLMES: She did not.

24           MR. SCHEU: It was on there.

25           DIRECTOR JOHNSON: Was it on there?

1 MR. BROWN: It was Brown and Sawgrass.

2 MR. SCHEU: Right.

3 MR. HOLMES: Make senses because they're  
4 both growth managers.

5 DIRECTOR JOHNSON: All right.

6 Mr. Chair, I apologize to you. I don't know  
7 where our third FIAC member is. He did  
8 confirm --

9 CHAIRMAN TUTEN: Did we try to reach out for  
10 him, or was he going to be here?

11 DIRECTOR JOHNSON: He confirmed he was going  
12 to be here.

13 CHAIRMAN TUTEN: Well, let's hope he didn't  
14 get in a wreck or something.

15 DIRECTOR JOHNSON: Yeah, that's the truth.

16 CHAIRMAN TUTEN: That has happened before.

17 DIRECTOR JOHNSON: I might have his number.  
18 We can call him.

19 CHAIRMAN TUTEN: Well, what were you guys  
20 going to do, listen to Dan and then recommend it  
21 to us?

22 MS. DEVINE: Listen to the three managers.

23 MR. LEWIS: Propose a recommendation.

24 CHAIRMAN TUTEN: Are you guys going to  
25 listen on the money manager presentation as well?

1 MR. LEWIS: We are.

2 CHAIRMAN TUTEN: Well, it's urgent business  
3 we've got to get done. We obviously can't send  
4 them home and wait for anybody. So we'll just  
5 roll with what we've got. You know, it happens.

6 Are they scheduling you guys' meeting from  
7 now on to merge with ours? Is that what we're  
8 doing?

9 MR. LEWIS: Just this.

10 DIRECTOR JOHNSON: It was just the timing,  
11 just the timing of this.

12 MR. SCHEU: Because of the interviews.

13 DIRECTOR JOHNSON: Because of the  
14 interviews, right.

15 We didn't want to bring these guys in here  
16 twice, once with that committee and then a second  
17 time with the Board.

18 MR. BROWN: Because a quorum is needed from  
19 them --

20 MS. HODGES: Right.

21 MR. BROWN: -- on a recommendation for a  
22 manger?

23 MS. HODGES: Right, uh-huh.

24 MR. SCHEU: So we just have to waive their  
25 recommendation, I guess. Can we do that?

1 MR. BROWN: Can we do that?

2 MS. HODGES: No, you can't, because your --  
3 your code requires you get a recommendation from  
4 that advisory committee.

5 MR. SCHEU: Can we get one of them on the  
6 phone?

7 DIRECTOR JOHNSON: No, we can't.

8 MS. HODGES: No, because you don't have a  
9 physical quorum. Remember, you need the physical  
10 quorum.

11 DIRECTOR JOHNSON: I've asked Lundy if he'll  
12 find Rob's number. I don't have it in my phone.

13 MR. BROWN: We have Bill Gassett who can  
14 fill in.

15 MR. GASSETT: That would be an honor, I  
16 think. It looks like you have two meetings  
17 anyway, so why not let these guys talk to you and  
18 then -- if I may suggest, maybe you thought about  
19 that. They still have to meet with the advisory  
20 committee.

21 MS. HODGES: Yeah. You can certainly have  
22 this Board take advantage of the information  
23 that's here, but you're just going to need an  
24 advisory recommendation from this committee  
25 before you can take action.

1 MR. BROWN: Can those two listen and then  
2 convene later with more members --

3 MS. HODGES: Yeah, once they have a quorum.

4 MR. BROWN: -- and discuss with them what  
5 they heard?

6 MS. HODGES: Yeah. Once they get their  
7 quorum, they can take action and you guys can  
8 rely on it.

9 MS. DEVINE: So Dan has already presented  
10 these three to the FIAC. We deliberated. I  
11 don't --

12 DIRECTOR JOHNSON: Oh, you mean -- right.  
13 You haven't seen the interviews.

14 MS. DEVINE: Without the managers, Dan has  
15 already presented all three to us.

16 CHAIRMAN TUTEN: So we can go ahead with the  
17 interviews and then they can discuss with their  
18 cohorts in the future --

19 MR. HOLMES: The presentations are -- are  
20 recorded. Could the FIAC members who are not  
21 here listen to the recording, if they so choose,  
22 in order to help them make a committee  
23 recommendation?

24 MS. HODGES: Yeah, they can --

25 DIRECTOR JOHNSON: I turn that over to our

1 attorney.

2 MS. HODGES: Right. Through the Chair, they  
3 can always listen to any recordings. But in  
4 order for this body to take official action,  
5 you've got to have a physical quorum and they've  
6 got to take a vote on it. That's what you need  
7 to make your decision.

8 But while everybody is here, we can listen  
9 to information and move forward and, hopefully,  
10 that third member comes and maybe they can have  
11 their quorum and take action.

12 MR. SCHEU: I'm sorry our task force  
13 recommended that as a governance reform.

14 (Laughter)

15 CHAIRMAN TUTEN: After the new reform bill  
16 passes Tuesday and the 2015 agreement is wiped  
17 out, are they going to still be here?

18 MR. SCHEU: They will be here.

19 MR. BROWN: That wasn't changed.

20 CHAIRMAN TUTEN: Is that in the new  
21 legislation or is that just something that the  
22 OGC said, oh, sure, we can keep them if we want  
23 to?

24 MS. HODGES: Through the Chair, it's  
25 currently in your ordinance. It's 121.501. So

1 that's in the municipal code, this committee.

2 CHAIRMAN TUTEN: Okay. I got it. Job  
3 security. We don't need people hanging around if  
4 we don't need them. Sorry.

5 (Laughter)

6 MR. LEWIS: -- then do a conference call  
7 with the full group, if that makes any sense, at  
8 a later date? If that's helpful.

9 MS. HODGES: So just to be clear, I don't  
10 think there's any wrong with this Board, who has  
11 a full membership here, to hear the information  
12 that's present. That's nothing wrong with that.

13 So if you want to move forward and listen to  
14 it and have people present, you can.

15 MR. BROWN: Our decision will just be  
16 delayed?

17 MS. HODGES: It will just be delayed.

18 CHAIRMAN TUTEN: Are you David or Bart?

19 MR. BUXBAUM: Bart.

20 CHAIRMAN TUTEN: Bart. Hand them out --  
21 your books too, so they can follow along, those  
22 two at the end.

23 DIRECTOR JOHNSON: I left a message. I did  
24 not reach him, but maybe he'll show up.

25 CHAIRMAN TUTEN: Okay. First up, we have

1 David Altman and Bart Buxbaum. Is Bart here?

2 Oh, you're here, Bart.

3 MR. BUXBAUM: And David is right here.

4 MS. DEVINE: Oh, there he is.

5 (Committee Member Kowkabany arrives.)

6 MR. SCHEU: So we now have a quorum.

7 CHAIRMAN TUTEN: That's right.

8 DIRECTOR JOHNSON: And we need to call that  
9 meeting to order.

10 MR. LUNDY: You call to order, and could  
11 they approve their minutes as well?

12 DIRECTOR JOHNSON: Right. You've gaveled  
13 this one into order.

14 CHAIRMAN TUTEN: Right.

15 DIRECTOR JOHNSON: He's going to gavel this  
16 one into order.

17 MR. LEWIS: Call to order as well.

18 DIRECTOR JOHNSON: We're sorry for all the  
19 confusion. I really apologize to you. We're  
20 looking forward to hearing your presentation.

21 MR. BUXBAUM: Good morning to everyone. We  
22 greatly appreciate the opportunity to be here  
23 today.

24 My name is Bart Buxbaum and I'm head of  
25 Client Service at HS Management Partners. With

1 me is one of my partners, David Altman. David is  
2 Director of Research and senior member of the  
3 investment team.

4 I thought maybe I would start with an  
5 overview of the firm and then I'll let David  
6 talk. He'll talk more about the specific  
7 investment philosophy of the firm. If you could  
8 start on page 3, please. Hopefully everybody's  
9 got the hard copy, plus we've got what's on up  
10 there.

11 We are a concentrated growth manager. We're  
12 along only stock portfolio with a maximum of 25  
13 holders in the portfolio. We only have one  
14 product. We're a very focused firm. We believe  
15 in the benefit of focus. So the product we're  
16 going to talk to you about today is the only  
17 thing that everyone, and there are 16 members of  
18 the firm, are focused on on a day-to-day basis.

19 It's really one decision across all of our  
20 accounts. So all of our clients are getting  
21 essentially the same product from us. We are  
22 bottom-up fundamentally, and we are benchmark  
23 agnostic, although we are judged by a couple of  
24 benchmarks that I'll talk about in a few minutes.

25 And at the end of the first quarter, assets

1           were about 3.5 billion, slightly above that  
2           today. And at the end of the first quarter this  
3           year, actually we hit a milestone in that we hit  
4           our ten-year performance track record on our  
5           performance record.

6           And, actually, David and one of our other  
7           partners, Harry Segalas, who's the CIO, had been  
8           practicing this type of philosophy for what,  
9           David?

10           MR. ALTMAN: It will be 24 years in October,  
11           and he always forgets our anniversary.

12           MR. BUXBAUM: I keep telling them if they  
13           keep practicing, they'll get it right.

14           On page 4 is a little bit about our team.  
15           There are four senior people that drive the  
16           investment process. Three of those are partners.  
17           David is one of them.

18           Harry Segalas, as I mentioned, he's the  
19           managing partner and he's the chief investment  
20           officer. He would be the portfolio manager on  
21           your portfolio, if you choose us, as well as all  
22           the other portfolios we have. And Greg Nejme, the  
23           fourth partner, is president.

24           The four partners of the firm actually have  
25           over 30 years of experience in the investment

1 business. The fourth member of the investment  
2 team is Rob Gebhart, who is a senior vice  
3 president with over 20 years of experience.

4 As I said, there are 16 people in total. If  
5 we turn to page 4, I think that's the one we're  
6 talking about now. There are 16 people in total.  
7 The partners own 100 percent of the firm, so we  
8 are a fully independent entity.

9 Now, I've been asked to discuss fees very  
10 briefly. We can leave this where it is, but if  
11 we just turn in your book to page 24, I'll be  
12 brief on this.

13 My understanding is that the total mandate  
14 is 90 million that may be divided, 45 million  
15 apiece. If you look at this fee schedule, 45  
16 million equates to 81 basis points. This is a  
17 straight fee. There's no performance fee or  
18 anything of that nature.

19 I should say that one of the things that we  
20 do, one accommodation that we make, and this is  
21 not to try to alter your decision at all, is at  
22 50 million, we give a 10 percent reduction in our  
23 fees.

24 So at 50 million with this fee schedule, you  
25 get 80 basis points. We would be at 70. If you

1 the apply that reduction on a \$90 million  
2 account, it would be a total of 61 basis points.

3 So, again, it's 81 basis points at 45  
4 million, 70 at 50 million -- that's reduced from  
5 80 -- and at 90 million, 61, which would be a  
6 reduction from the typical fee of 67.

7 If you would now turn back to -- we'll go to  
8 page 5, which gives you sort of an idea of the  
9 growth of our firm, both in number of accounts in  
10 the blue line and AUM in the dotted red line.

11 About 80 percent of our accounts are from  
12 nontaxable institutions and organizations, and  
13 about 25 percent of our assets currently are  
14 pension plans that we manage money for. We have  
15 about 237 accounts. And as I said before, 3 1/2  
16 billion dollars at this point.

17 Page 6. Our Investment Goal: To deliver  
18 absolute returns over time by owning what we  
19 think are good quality businesses, growing the  
20 earnings and cash flow stream yearly in the  
21 portfolio, and attaching ourselves to the stream  
22 at an attractive valuation.

23 That's really what we think our competitive  
24 advantage is. We put together an earnings and  
25 cash flow stream from the portfolio that we try

1 to grow each and every year and try to pay the  
2 right price for that. And we think this growing  
3 earnings and cash flow stream actually put upward  
4 pressure on the value of the portfolio.

5 We think that over a long-term time horizon,  
6 these positive, absolute gains will translate  
7 into very good relative performance as well.

8 And the actual -- if you go to page 7, is  
9 the actual historical performance that our  
10 clients have experienced. It gives you the one,  
11 three, five and ten year -- and ten year, again,  
12 is something that we just achieved at the end of  
13 the first quarter.

14 Institutions typically grade us against the  
15 Russell 1000 Growth Index. So I think that may  
16 be the most appropriate index. Individuals -- in  
17 about 20 percent of our businesses, individuals  
18 tend to look at us versus the S&P just because  
19 that's something that they are more familiar  
20 with.

21 As you can see, recent performance has been  
22 challenging, given our investment approach and  
23 the type of equity market we've experienced.  
24 David is going to talk more about this.

25 Longer term, we think the returns have been

1 quite favorable. And, you know, this is a chart  
2 that looks at it on kind of a, you know, we're  
3 breaking it down into calendar years.

4 If you go to page 8 and you sort of take  
5 rolling performance on a monthly basis, this  
6 gives you an idea how we have done versus the  
7 Russell 1000 Growth on a rolling basis.

8 And so we've -- you know, we've outperformed  
9 on 62 of 109 one-year periods. If you go down to  
10 five-year periods and ten-year periods, we've  
11 been able to successfully outperform over those  
12 long periods of time every time. Obviously  
13 there's only one ten-year period.

14 And then finally on the following page is  
15 our long-term outperformance. It gives you an  
16 idea of what it looks like on a cumulative  
17 relative. So it basically takes the cumulative  
18 outperformance on a year-by-year basis and  
19 quarter-by-quarter basis, really, and accumulates  
20 that over the time frame versus both the Russell  
21 and the S&P.

22 And to give you an idea, if the performance  
23 were in line with the index, it would be a  
24 straight line along the axis down there. So the  
25 upward bias is the outperformance. It gives you

1 an idea of what ten years of outperformance --  
2 and, again, you can see the chart is upwardly  
3 sloping, sometimes downwards at others, but the  
4 cumulative impact has been -- has been quite  
5 positive.

6 With that, let me turn it over to David.  
7 And he's going to discuss more about what to  
8 expect from our investment process and different  
9 types of environments.

10 MS. ALTMAN: Hi. Good morning, everybody.  
11 My colleagues and I really appreciate the  
12 opportunity to talk to you today.

13 Page 10. Really important. There's a  
14 couple of really important ones here. I know  
15 we're on a time constraint.

16 This is upside/downside capture. Basically  
17 what this shows is our investment philosophy. We  
18 capture most of the upside in rising markets.

19 But the secret sauce behind the long-term  
20 outperformance of our strategy is the downside  
21 potential. And what this means is that if the  
22 market goes down, we go down less.

23 And one of our colleagues we've worked with  
24 who is subsequently not with us used to say, math  
25 is a terrible thing. If you go down 50 percent,

1           you've got to double to get back to where we  
2           were. We don't like that math.

3           So if we can limit the downside. This is  
4           the reason we outperformed in '08 and '09. This  
5           is the reason we outperformed in '00 and through  
6           '02, and the same thing in the '90s

7           And as I'll get to in a moment, we have not  
8           had a market which is valued or appreciated risk.  
9           It happens. I don't know when. None of us know  
10          when, but it happens over cycle.

11          So if you look at page 11, why does this  
12          work? It works because we're bottoms-up  
13          investors. Think about how you would invest with  
14          your own money. You'd want to understand the  
15          business you own. That's us.

16          We like sustainable business models with  
17          competitive advantage. We pay strict attention  
18          to valuation, which is why in rising markets,  
19          you'll see us take profits and in down markets  
20          you'll see us load up on things that we think are  
21          undervalued.

22          But that valuation distance is terribly  
23          important when people don't appreciate risk and  
24          you have a momentum-driven market. Nothing goes  
25          to the sky anymore.

1           We don't -- largely view this large cap but  
2 will go down as low as 2 to 3 billion in market  
3 cap. Again, we're not looking at the market caps  
4 per se. We're looking at the quality of the  
5 businesses. And if we can find a great business  
6 that fits our attributes and it happens to be a  
7 \$5 million market cap and the valuation is  
8 attractive, we'd want to participate in that.

9           Active management has value. Our turnover  
10 is between 70 and 90 percent. In up markets like  
11 this, that means we're taking profits on the way  
12 up.

13           We will own an equity on our client's behalf  
14 as long as the fundamentals are intact, the  
15 valuation's attractive, and there aren't better  
16 alternatives.

17           Every day we come to the office with a clean  
18 slate. That's why all of our accounts look  
19 alike. We have a lot of our family's money  
20 invested in this strategy. Our accounts are  
21 treated no different than our clients'. They  
22 look exactly the same.

23           But we like making one decision across all  
24 the portfolios. And it's really important in  
25 rising markets because if you have an equity

1       that's doing really well, a new client comes in,  
2       they don't get the benefit of the past 100  
3       percent move, 50 percent move. You've got to  
4       make that decision today.

5               How much Walmart do you want to own today?  
6       How much Alphabet -- used to be known as  
7       Google -- do you want to own today? We like that  
8       discipline.

9               If you look at page 12, the way it's kind  
10      of -- this is a weird chart because it should be  
11      the other way, but basically it's tracks by new  
12      generation.

13              There are a lot of businesses we will not  
14      invest in. Think about what we want. We want  
15      sustainable businesses that are transparent, easy  
16      to understand. We don't like cyclicity. We  
17      know every business will have some degree of  
18      cyclicity, but we don't like industries where,  
19      if things get tough, the consumer and the  
20      business can say, you know what? I'll defer to  
21      purchase. I don't want to participate in this.

22              So you'll see us really play in consumer  
23      facing businesses, consumer technology. You'll  
24      see us participate in retail, in media, in  
25      business services.

1           You will not see us own banks. We don't --  
2           nothing against banks, but we can't independently  
3           verify the quality of the balance sheets. We  
4           don't know the reserves that are being set  
5           against the loans, the residual values against  
6           the leases. We require transparency.

7           We won't see us own commodities. We have no  
8           insight on what oil is going to do, gold is going  
9           to do, et cetera.

10          What we do know is when the fertilizer hits  
11          the fan in 2008 and 2009, we have a very high  
12          conviction level that Nestle's going to sell more  
13          bottled water, Starbucks is going to sell some  
14          coffee, and McDonald's is going to sell some  
15          burgers. That we know. And over time that is  
16          working on behalf of our clients.

17          Once we've got an idea that kind of makes  
18          some sense on from 50,000 feet, we pop it on the  
19          focus list. We appoint one, myself, Kate or Rob  
20          right now, to be a point person. We like doing  
21          our own work. There's a comfort in that.

22          Sometimes, believe it or not, the self side,  
23          the street, doesn't really understand everything  
24          the way you'd like them to do. So we like doing  
25          our own work. We look out five years. We do tax

1 flow. We do P&Ls, balance sheets, et cetera.

2 And then evaluation discipline. It can be a  
3 great business. If it looks expensive to us --  
4 and we use a multi-dimension evaluation approach.  
5 We're looking at price multiples, recapturing  
6 yields. We do a DCF, a discounted future value.  
7 Basically it's -- we call it a price value. It's  
8 basically discounted cash flows.

9 We look out five years (indiscernible)  
10 different discount rates based on the quality of  
11 business, and see who's attractive. Again, you  
12 can't do that unless you're doing your own work  
13 because most people aren't looking out five  
14 years. If everything aligns, it can find its way  
15 into the portfolio.

16 On the next page, page 13, this is our Focus  
17 List, and basically this institutionalizes what I  
18 just talked about. Different companies,  
19 different growth rates, different earnings,  
20 different balance sheets. It's an eye chart.  
21 Don't spend much -- that's why I'm wearing  
22 bifocals these days.

23 Page 14 is another really important thing,  
24 especially when we've been -- I guess it's been  
25 eight (indiscernible).

1           You know, there's an old saying in the  
2 business, pigs get slaughtered. Someone once  
3 asked Bernard Berk (phonetic) how he got rich.  
4 He said, I sold early. Remember important in  
5 go-go markets.

6           We have three reasons to sell. It's one of  
7 the reasons -- one of the ways we control risk on  
8 our clients' behalf. Fundamentals. We're wrong.  
9 We make mistakes. It's part of the business.  
10 But we recognize them, own up to them and move  
11 on.

12           Valuation. Especially in this type of  
13 market. Equities are appreciating. We were  
14 buying more Facebook, more Heineken and more  
15 Nestle and Nike post election. All four stocks  
16 were getting destroyed post election.  
17 Facebook -- none of them for fundamental reasons.  
18 Dollar concerns, border tax concerns, whatever.

19           We've now been cutting them back because  
20 they've all rallied 20, 30 percent off that  
21 bottom. Not that we're that smart, but just  
22 trying to show you the valuation discipline.  
23 Buying when they're under pressure, the  
24 fundamentals are intact. We only take profits on  
25 the way up.

1           And Better Alternatives. That's really  
2           important because we're playing in a very  
3           high-quality sandbox. There's 50 stocks on our  
4           focus list. That means there's 25, 26, 27 names  
5           we don't own, and they're fighting to get their  
6           way in the portfolio.

7           And a lot of times you will not see a  
8           secular change. You'll just suspect there's  
9           something wrong there.

10          The best example I can give you is back in  
11          the day we owned the New York Times in 2004, and  
12          it was a great stock. We're talking about it in  
13          the office saying, you know, there's this thing,  
14          the Internet, and we think somehow it's going to  
15          affect advertising. We're really not sure.

16          But it gets you to ask some questions. Do  
17          you want to sit there? We don't know. If we  
18          don't know, we're out. We don't have to own  
19          anything, any specific industry per se.

20          So it's a wonderful discipline to have that  
21          pressure on the portfolio, constantly challenging  
22          your best thinking: Is this the best use of your  
23          clients' capital each and every day?

24          Page 15 is another way we think about risk.  
25          We're really focused on the earnings and the

1 fundamental risk. Again, do we make a mistake?  
2 Do we have it right? The valuation discipline is  
3 really important.

4 You will see us enter a stock -- by and  
5 large, we'll be early. We will. And we usually  
6 sell early. But that's the valuation discipline  
7 kicking in. And that's really what protects the  
8 clients' capitals when markets get more  
9 challenging and when people appreciate this.

10 So that's kind of the scales we're always  
11 risking. If you kind of think about the world in  
12 simple terms, we will never, ever, ever take one  
13 increment of risk to get one increment of return.  
14 That is a terrible trade. So we're always made  
15 aware of the downside if we make a wrong  
16 decision. And, again, trying to protect our  
17 clients' capital.

18 Page 16 is a snapshot of the portfolio. You  
19 will -- right now we own 24 stocks. Our maximum  
20 is 25. We think this -- we think this actually  
21 reduces risk. Understanding why you own  
22 something and being able to monitor it, we truly  
23 believe, reduces risk.

24 Every time the market through great go-go  
25 times -- 1980, S&P at its peak, 1980, was about

1 16 percent energy. The people who were buying  
2 the S&P think they had 16 percent exposed energy.

3 1999, over 40 percent of the market was tied  
4 to technology. The people appreciate that risk.  
5 2007. Over 20 percent tied to financial  
6 services. We don't invest that way. Each  
7 business has to stand on its own merits.

8 I think you'll recognize virtually every  
9 name on this slide. And there's different  
10 position sizes. Concentrating the most of our  
11 clients' capitals in the highest conviction under  
12 valued names.

13 Traditionally you'll see the top ten  
14 holdings for us be between 50 and 60 percent of  
15 your account. We like that. That's the way it  
16 should be. And we think only 20 to 25 stocks  
17 gives us the necessary diversity across the  
18 landscape. We've got retail. We've got spirits.  
19 Everyone likes drinking.

20 We've got travel, consumer products. And,  
21 again, front-facing technologies, the Facebooks,  
22 the Alphabets, the PayPals.

23 Again, if there's any questions, just pop up  
24 once I've finished.

25 Page 17. If we get the valuation right, the

1 portfolio does the heavy lifting on the earnings.  
2 So we don't have to bake in rising multiples.  
3 We're thinking about a portfolio that grows its  
4 earnings each and every year. This year we think  
5 it's 10 percent. There's a slight drive from  
6 currency. Longer term extends to 14.

7 What the slide doesn't show is that in 2008,  
8 2009, we grew earnings in the portfolio.  
9 Corporate profits collapsed. In 2001, 2002, we  
10 grew it into the portfolio. So it's not going to  
11 be 10 percent, 10 to 14 every year.

12 But what's really important is being able to  
13 grow the earnings each and every year, puts  
14 pressure on that portfolio. You add in a 2  
15 percent dividend yield. You don't need any  
16 multiple depreciation to kind of reach what are  
17 reasonable goals.

18 And, more importantly, you can suffer some  
19 multiple degradation and still protect the value  
20 of the account.

21 By the way, this is a really high-quality  
22 earnings stream. Bad business model. 0 to 2  
23 percent revenue growth, magical margin expansion  
24 because you're firing everybody and not sending  
25 money on advertising, and you can get to high

1 single-digit earnings growth. That is not  
2 sustainable.

3 This earnings growth -- and the way we build  
4 it, bottoms up, if you look at either 17, 18 or  
5 long term, 7 to 8 percent revenue growth, modest  
6 margin expansion and simply the redeployment of  
7 free cash flow from the business under the  
8 acquisitions or to share buy-back.

9 Strong balance sheets -- and I think you'll  
10 see this on the next page, page 18, we're really  
11 (indiscernible) and free cash flow, because  
12 believe it or not, capital markets do seize up.  
13 And when that happens, you want to hold companies  
14 like JP Morgan (indiscernible) just a strong  
15 balance sheet. The business itself generates a  
16 lot of cash, and those businesses can be very  
17 opportunistic.

18 Basically what this slide shows is on  
19 average, for every dollar of earnings that's  
20 generated in this portfolio, our clients'  
21 portfolio, 99 cents is cash. If you're running  
22 your own business, you would love this model.  
23 Cash is king.

24 On page 19 and page 20 we've got a couple of  
25 slides in valuation. Valuation is, you know, we

1 call it reasonable, attractive right now. You  
2 can see. This is simply the forward 12-month  
3 earnings in the portfolio, price earnings  
4 multiple. We're basically back to where we  
5 opened the firm in the latter part of 2007. It  
6 drops down during the oil crisis in late 2010 and  
7 then back up again.

8 By the way, this 21 multiple, again, it's  
9 reasonable on a long-term basis.

10 If you go to the next page, we're just  
11 comparing our multiple earnings to the bond  
12 yield. And all this basically shows is interest  
13 rates can go up without a significant impact on  
14 this price average multiple. There's a lot of  
15 room between the two.

16 Pre-2000, believe it or not, on a  
17 high-quality portfolio that Harry and I used to  
18 run in a previous firm, this red line would be  
19 above -- yeah, it would be above the blue line.

20 In other words, what you would have, you  
21 would have a 60, 70 percent relationship. The  
22 portfolio would be turning in 60 to 70 percent of  
23 the bond yield. Once interest rates deregulated  
24 and once the global interest rate bond market  
25 became global, all of a sudden we're tied to what

1 the German (indiscernible), that completely  
2 flipped.

3 So all we're saying here is valuations are  
4 okay and we can afford to have an upward movement  
5 in interest rates, which, by the way, would  
6 probably be good for everybody. Help depreciates  
7 the risk.

8 And then finally, before I wrap up and make  
9 sure we're on time, this bar. This is what's  
10 happening. We have not taken stupid deals, okay?  
11 But we also weren't geniuses either. This is the  
12 market we're facing.

13 The first five years you had periods where  
14 risk was appreciated. It could have been the  
15 Euro crisis. Obviously we had that horrific  
16 recession of '08 and '09.

17 But you had enough -- all you need for our  
18 strategy to work is an appreciation of risk. It  
19 doesn't have to be a bare market. It doesn't  
20 have to be anything like that. Just have an  
21 appreciation of risk.

22 We have had a one-way market since the  
23 middle of -- actually, since the start of 2015.  
24 17 quarters, only one down. We'd all love that  
25 to continue. On an absolute basis, that's not

1           likely.

2           And so, again, all that's happened here,  
3           it's been a narrow market as well. There's been  
4           years where seven stocks drove almost the entire  
5           market's appreciation. So we think we're going  
6           to get back to more normal times and be good  
7           times still.

8           But, again, that's the environment virtually  
9           every active manager has faced. We're not going  
10          to deviated. We're not going to change. We're  
11          not going to sit there and say, gee, we think the  
12          valuation will go a lot higher. Buy more of this  
13          stock. We don't think like that.

14          And with that, I'll let my colleague Bart  
15          close.

16          MR. BUXBAUM: Thank you for your time this  
17          morning.

18          You know, we think and we hope that we've  
19          been able to give you a good sense of our  
20          investment methodology. We would like to partner  
21          with you. We think that our methodology does add  
22          value through cycles. And, most importantly,  
23          it's resilient in tougher times.

24          We think that the portfolio, as it stands  
25          now, is attractive on a multiple basis. And we

1 look forward to any questions you might have that  
2 Dave and I can take.

3 Yes.

4 MS. DEVINE: Hi. Thank you. Curious.  
5 First of all, is Harry related to Sid Segalas?

6 MR. BUXBAUM: Harry is the son of Sid  
7 Segalas.

8 MS. DEVINE: He is the son.

9 MR. BUXBAUM: Yes. And Sid is now in his  
10 early 80s and very actively managing billions of  
11 dollars. Harry lives and breathes -- same  
12 bloodline -- lives and breathes the stock market.  
13 And Harry who, you know, is in very good health,  
14 expects to do this well into his 80s.

15 Harris is my age. So he's about to turn 57.  
16 So he's got, you know, at least hopefully another  
17 25 years in front of him enjoying this career.

18 MS. DEVINE: Second question. Was the  
19 compensation for investment professionals only,  
20 what is it tied to? Specifically, a benchmark  
21 and what time periods.

22 MR. ALTMAN: You know, we win together, we  
23 lose together. It's that simple. How the firm  
24 does. And how the firm does is a function of our  
25 (indiscernible). Clients do well, everybody

1 wins. There is no performance benefits here.  
2 There's no benchmark benefits here. It's just a  
3 matter of the underlying health of the business  
4 and how the performance is done.

5 You've got 12 colleagues that are not  
6 partners. There's annual reviews. There's  
7 constant feedback. But there's no -- everyone is  
8 incentive for our clients to do well. It's just  
9 a very -- we run our firm like we invest. It's  
10 transparent and it's simple.

11 MR. ALTMAN: I think also if you look at the  
12 team, it's very collegial in that there will be a  
13 point person on every stock that's held in the  
14 portfolio, but it's not uncommon for the entire  
15 investment team to be listening.

16 They are all really generous, listening to  
17 all the conference calls for the particular  
18 companies, not just the ones that they're a point  
19 person to, but they're expected to participate in  
20 all of the companies.

21 MR. BUXBAUM: If there's a mistake made,  
22 it's our mistake. It's never in isolation. And  
23 when there's a success, it's our success. It's a  
24 very flat investment team. We've worked  
25 together -- Harry and I have worked together

1 since September 30, 1993.

2 Rob Gebhart is another senior investment  
3 person Harry and I hired from our previous firm.  
4 We've worked with Rob for over 15 years. So  
5 you've got that. Greg and Harry used to work  
6 together (indiscernible). This dates back to the  
7 mid-80s.

8 So you've got -- the think we bring to bare  
9 is a single, maniacal focus on one product and a  
10 team-oriented approach on how we research that  
11 product, invest, and work together. So there's  
12 no second product. There's nothing going on  
13 besides this. It's very straight forward and  
14 transparent.

15 MS. DEVINE: Thank you.

16 MR. HOLMES: Besides the valuation  
17 discipline and the quality of the names, are  
18 there any other ways you manage risk?

19 MR. BUXBAUM: We've managed risks through --  
20 well, it's a valuation (indiscernible) the  
21 quality of the names being (indiscernible).

22 We're aware -- I mean, we don't sit there  
23 and say we have to have 20 percent in retail, but  
24 we're aware that we probably shouldn't own  
25 Walmart and Target at the same time.

1           You know, we're aware, you know, that we  
2           have an exposure -- if you go to page -- the  
3           portfolio is on page 15. Oh, 16. I'm sorry.  
4           Off by one. I really am good at math, by the  
5           way.

6           But if you look here, we're aware we have a  
7           travel exposure. Right? We've got Priceline,  
8           we've got Marriott. But guess what?

9           MR. ALTMAN: Carnival.

10          MR. BUXBAUM: Carnival. And we've got LVMH.  
11          But guess what? The biggest bump in their  
12          profits comes from travel through Chinese  
13          tourists going overseas. So we're aware of that.

14          So we don't want to be unduly exposed to  
15          (indiscernible). That's another way we think  
16          about it. So if another name came in the  
17          portfolio that looked like it was tied to a  
18          travel site, we'd have to give a hard thought to  
19          what we put in the portfolio that will make it  
20          better than something else.

21          MR. ALTMAN: I think also just on the risk  
22          standpoint, because we're often asked what 25  
23          names are at risk here. And we -- if you just  
24          look at the number of names, you get sort of one  
25          impression.

1           If you go down below that, you see that  
2           typically with these types of names, they're  
3           selling a fairly low-priced good or service on a  
4           monthly, weekly, even a daily basis, to literally  
5           billions of consumers around the world.

6           So when you go down a couple of folds, you  
7           find that the real diversification is across that  
8           consumer base, which is billions of people and  
9           the fact that these are not high-priced items for  
10          the most part, and they are bought quite  
11          frequently.

12          MR. HOLMES:   So what kind of -- to control  
13          expectations, what kind of markets value or  
14          market environments would we expect out  
15          performance versus, say, the growth index and  
16          underperformance?

17          MR. ALTMAN:   Anytime people ignore risk,  
18          it's tough.   So if you think about when we  
19          underperform, it's usually for a -- this has been  
20          a very unusual period.   It's usually temporary.  
21          It's usually 12, 18 months we go back and look at  
22          the start of performance, but the first year out  
23          of a recession.   So in '03.

24          We didn't do it in '09 or '10 because  
25          everything got so decimated, it didn't really

1 matter. So you go back to the '90s, same  
2 strategy, the same thing.

3 Why? Because people were looking for rate  
4 of change and earnings to grow the company. So  
5 deep cyclical companies went from losing money to  
6 making money. That's where you want to do.

7 But that's why the strategy works at times.  
8 Those times tend to be atypical. This is an  
9 atypical period.

10 So just think about all you need to have is  
11 an appreciation for potential loss investment on  
12 the part of the investment community. That's --  
13 that's good for us. That's good for the  
14 strategy. You have to be willing to own quality  
15 names. You have to pay a lot for them, but just  
16 make sure that you have that bias.

17 So if we have a run -- there was a six-month  
18 run where Goldman Sachs, I think, said  
19 (indiscernible) in the first half of '08, again,  
20 we're not going to do that. But that's just a  
21 short period of time.

22 That's why when you look over a ten-year  
23 period, and we had a track record before that,  
24 this strategy does work out for our clients'  
25 behalf over long periods of time.

1 MR. LEWIS: If you go back to slide 10, the  
2 upside downside capture, a lot of active managers  
3 have a, you know, good downside capture ratio  
4 because they may have cash in the portfolio.

5 So talk to me a little bit about your cash  
6 positioning. Are you fully invested over a  
7 cycle?

8 MR. ALTMAN: That's a very good question.  
9 Thank you.

10 We assume that the asset allocation decision  
11 is made away from us so that when we are given  
12 funds, they should be fully invested. So we are  
13 99 plus percent invested in our portfolios at all  
14 times.

15 MR. BROWN: Quick question. You mentioned  
16 25 is the max number of companies.

17 MR. ALTMAN: Yes.

18 MR. BROWN: Is there any flexibility for  
19 that? For example, if you're looking at the  
20 companies that you currently hold, you're right  
21 at 25, but you see a reason why another company  
22 would be a good pickup, but you can't -- you  
23 don't really want to justify dumping one that you  
24 have.

25 Do you hold that 25 just strictly because

1 that has been your established philosophy, or is  
2 there any flexibility in that?

3 MR. BUXBAUM: That's a good question, Chris.

4 We like making hard decisions. We like --  
5 we do. So if something is knocking on the door,  
6 one of those 25 is going out, if it's that  
7 much -- again, it comes back to, we're trying to  
8 allocate capital every day to the best possible  
9 appreciation potential on a risk-adjusted basis  
10 for our clients.

11 So every name we own on that slide has  
12 risks. In fact, when we put up -- when we do a  
13 name, we do a one-page tear sheet. We don't like  
14 writing a lot. So we're a very focused firm. We  
15 have conversations, less writing. But we do a  
16 one-page tear sheet.

17 And in each company's case, we have five  
18 attributes. And the attributes are unique to a  
19 company. It can't be, gee, I think it's going to  
20 be sunny today. It's going to be one, two,  
21 three, four, five, and there's three unique  
22 risks. And what would really start a nice  
23 discussion is when one of the attributes is  
24 challenged or there's an additional risk.

25 So there's always something going on with

1 every name in our portfolio, even independent  
2 valuation, which challenges our conventions every  
3 day so we don't get comfortable about it because  
4 we don't have perfect foresight.

5 MR. ALTMAN: I would just add, there's  
6 nothing magical in our minds about 25. But we  
7 think it's very important to have that hard cap  
8 to force the hard decisions.

9 Yes.

10 MR. PATSY: I apologize if you said this and  
11 I missed it, but going back to page 11, you talk  
12 about a multi-dimensional approach to growth.  
13 What exactly do you mean by that?

14 MR. BUXBAUM: Well, we're thinking about --  
15 if you think about a portfolio that grosses  
16 earnings of 10 to 14 percent a year, we're  
17 basically saying -- we don't demand that every  
18 company we own grow its earnings at that rate.  
19 It's a portfolio. We kind of get that.

20 There are going to be companies that are  
21 going to grow at 20 percent over the next several  
22 years, like a Facebook, but there's going to be  
23 companies like a McDonald's, Nestle's, Diageo,  
24 they're going to grow 8 long term. There will be  
25 periods when they might do a little bit better, a

1 little bit worse.

2 But the portfolio in total, we want to shoot  
3 to get at least that 10 percent if we can. So  
4 there's different attributes behind that growth.

5 Some companies, like the business model, if  
6 you would, for a Walmart is 1 to 2 percent comp  
7 traffic. Mostly traffic, not price. 1 to 2  
8 percent like for like sales growth, a little bit  
9 of square footage growth. Growth in  
10 international markets, redeployment of free cash  
11 flow, and hopefully some leverage in the business  
12 and we can kind of get 8.

13 The model for Facebook is going to be users,  
14 average revenue per user, engagement, monetize  
15 that -- oh, by the way, I'm going to start to  
16 monetize Instagram, Messenger at some point, and  
17 that's probably going to get me 20 to 25 percent  
18 revenue growth, but on declining margins because  
19 those other businesses will never be as  
20 profitable as the core.

21 So that's the multi-dimensional approach.  
22 Each company has its specific operating  
23 characteristics. We want to recognize them, but  
24 we don't go into work every day saying, well,  
25 gee, here's the cookie cutter. We need --

1 everybody's got to grow to the top line at this  
2 and everyone has to have margins of X, everyone's  
3 got to have ready cash flow of Y. We don't think  
4 of it that way.

5 The point is to get the whole portfolio to  
6 generate over a long period of time 10 to 14  
7 percent earnings growth in a sustainable,  
8 high-quality fashion.

9 MR. HOLMES: Any other questions?

10 MR. LEWIS: You mentioned Facebook.

11 MR. SUGARMAN: Yes, I have a couple, if I  
12 may. I'm Bob Sugarman. I'm one of the lawyers.

13 Have you worked with other Florida funds on  
14 our Protecting Florida Investment Act? Are you  
15 familiar with that and how to screen the  
16 portfolio?

17 MR. ALTMAN: No, we are not familiar with  
18 that.

19 MR. SUGARMAN: Okay. We'll work with you on  
20 that. Is it a domestic portfolio entirely?

21 MR. HOLMES: Yes.

22 MR. ALTMAN: The parameters are no more than  
23 30 percent of the portfolio can be held outside  
24 the US, and we're looking for --

25 MR. SUGARMAN: Okay. So you would have to

1 certify compliance with that.

2 You said that you have just about two dozen  
3 companies. Could you tell the trustees your due  
4 diligence? Do you actually go visit them? Is it  
5 conference calls? How do you -- how do you  
6 monitor your investments here?

7 MR. ALTMAN: Hi, Bob. It's David Altman.

8 It's a combination of everything. You know,  
9 you can't see me, but I still have all my hair.  
10 I'll be turning 60 in June. We've been doing  
11 these for a long time.

12 There's a lot of companies we own that we  
13 know. So sometimes if we know the company really  
14 well -- Amazon would be a great case. We've  
15 owned it, sold it, owned it, sold it. There that  
16 may not require a physical visit right away.

17 A de novo, a new name, there will be a lot  
18 of work done. The benefit of being in New York  
19 is a lot of companies come. There's conferences.  
20 We know a lot of people. We get minutes from  
21 meetings. So it's a combination of all these  
22 things.

23 I'm going to a Diageo meeting in two weeks.  
24 And as part of that, I'm also going to see  
25 McDonald's. I'm not the point person on

1 McDonald's, but they know us for a long period of  
2 time. We're certainly not McDonald's largest  
3 shareholders. Because of that relationship,  
4 we've got an hour meeting with the head of  
5 (indiscernible), but that's valuable to us.

6 So we'll do whatever is necessary. We do a  
7 lot of work away from companies. We go  
8 through -- I love 10-Ks and 10-Qs. No one really  
9 understands why. Those are SEC filings.

10 But there's a lot of information that --  
11 proxies. We meet every proxy. We want to know  
12 how people -- so we'll do what we have to do to  
13 fill in any questions or issues that we think  
14 have been raised. But there is no -- again, no  
15 cookie-cutter approach. Each company is  
16 different. Each one has a different experience  
17 base.

18 What I will tell you is when a new name is  
19 being looked at, everyone is on board. Everyone  
20 is trying to figure out how we can help whoever  
21 the point person is, what do we have to do to get  
22 a better grasp of what the issues are surrounding  
23 the company.

24 MR. SUGARMAN: The voting proxy. Our  
25 managers vote their own proxies; is that right?

1 MR. HOLMES: Yes.

2 MR. SUGARMAN: What proxy voting guidelines?  
3 Do you use a service? Do you follow AFL-CIO  
4 guidelines, CII guidelines? What -- how do you  
5 go about that?

6 MR. ALTMAN: We have a five-member proxy  
7 committee that meets every quarter. If there's  
8 issues raised -- in fact, we're in the middle of  
9 proxy season now. We have three point-person  
10 analysts: myself, Kate and Rob.

11 There's 24, 25 proxies we have to read.  
12 Each one gets read. If there's issues in it we  
13 want to flag, we flag it. We've had calls with  
14 the company.

15 By the way, no one gets -- always get a call  
16 back when you have a question on the proxy. You  
17 know, they want to get everything teed up before  
18 the shareholders' meeting.

19 So we've had questions about one company we  
20 owned where, two classes of stock, and we weren't  
21 too thrilled with the quality of people that we  
22 controlling the majority of the votes. Wanted to  
23 understand that. We actually led to exiting the  
24 company after reading its proxy. We didn't like  
25 the way the compensation was set up.

1           So proxies become incredibly valuable.  
2           There's a tremendous amount of information in  
3           there, but we want -- yes, okay, questions get  
4           asked, we'll call the company. They get back to  
5           us. We'll have a call with someone like yourself  
6           on the other line with the CFO and go through the  
7           issues.

8           But, again, we take that task really  
9           seriously. And, again, if it's a big issue, then  
10          the committee meets and decides what we want to  
11          do.

12          In the case of a Nestle, for instance, if we  
13          vote the proxy, we're shut out of trading the  
14          shares for a couple of days. We had a committee  
15          meeting. We spoke to outside counsel. We  
16          thought that would not be in the best interests  
17          of our clients, so we abstained.

18          MR. HOLMES: The non-US exposures, is that  
19          primary ADRs, or is it --

20          MR. BUXBAUM: It is both. It can be ADRs or  
21          ordinaries. I mean, I would -- as a general  
22          rule, we typically do ADRs when we're looking for  
23          liquidity. Whether ADRs or ordinaries, there are  
24          brokerage firms that can change ordinaries into  
25          ADRs, ADRs into ordinaries. So you have no

1 trouble with the trading aspect of it.

2 And we've just found that it's much more  
3 straight forward to have ADRs in the portfolio.  
4 So I would expect your portfolio to have ADRs if  
5 you chose us.

6 MR. SUGARMAN: And you mentioned brokers.  
7 Do you select the brokers for executing your  
8 trades?

9 MR. ALTMAN: Yes. Again, we have -- we're  
10 pretty buttoned up. We have a best execution  
11 committee. It has a bunch of us on it. And we  
12 have an approved list of brokers we do business  
13 with. And we have targeted budgets each year  
14 based on the quality of the research we're  
15 getting, their access to conferences, their  
16 trading efficiency, their custodial -- everything  
17 gets weighed into there. Everything gets tiered.  
18 It's reviewed every quarter, and we can change  
19 targets, add or delete people as possible.

20 MR. SUGARMAN: Can you speak a little  
21 louder, please?

22 MR. ALTMAN: I'm sorry.

23 DIRECTOR JOHNSON: Hey, Dan, we've got to  
24 bring the next managers in.

25 MR. HOLMES: Yeah.

1           MR. ALTMAN: I'll just say we have a best  
2 execution committee. We have an approved list of  
3 brokers, about 10 or 11. Everybody get graded  
4 based on quality of the research, access to  
5 management, conferences, trading efficiency, et  
6 cetera, and budgets are set annually.

7           MR. SUGARMAN: Do you accept any -- my last  
8 question. Do you accept any stock dollar benefit  
9 of any sort?

10          MR. ALTMAN: Such as -- I'm sorry.

11          MR. SUGARMAN: Such as research services,  
12 paid attendance at conferences, things of that  
13 sort.

14          MR. ALTMAN: We don't pay attendance for  
15 conferences, no. I mean, we get -- the Bloomberg  
16 Terminal and Thomson are paid for, but that's  
17 obviously access to all the information that's on  
18 them. We don't use -- in case you're interested,  
19 we do not use any of these expert third parties  
20 that go out in the marketplace either.

21                 But we do use -- we do use trading dollars  
22 to fund the Bloomberg and Thomson terminals.

23          DIRECTOR JOHNSON: All right, gentlemen. We  
24 appreciate it.

25          MR. ALTMAN: Thank you so much.

1 MR. BUXBAUM: Thank you very much.

2 DIRECTOR JOHNSON: Thank you, Bill. You've  
3 got to run.

4 MR. SCHEU: Yes.

5 MR. SUGARMAN: Tim?

6 DIRECTOR JOHNSON: Yes, Bob.

7 MR. SUGARMAN: Are the trustees familiar  
8 with soft dollars and they're considered assets  
9 of the plan and all that sort of stuff and the  
10 committee members?

11 DIRECTOR JOHNSON: Well, they're familiar  
12 with soft dollars. Your other comment about the  
13 impact of soft dollars, I'm not as clear on.

14 But Dan's been around for a while. Have you  
15 talked soft dollars with the trustees in the  
16 past?

17 MR. HOLMES: Not on a specific basis. I  
18 mean, just, you know, more or less in general.

19 DIRECTOR JOHNSON: Right. I get it.

20 MR. HOLMES: I can address it now or  
21 whenever it's appropriate.

22 DIRECTOR JOHNSON: We don't need to do it  
23 now. We'll do it in the future.

24 This is not a break.

25 MR. HOLMES: Bottom line is, with regard to

1 any of these managers, we don't have an issue  
2 with regard to how they trade.

3 DIRECTOR JOHNSON: Right.

4 MR. HOLMES: Or the use of soft dollars.

5 DIRECTOR JOHNSON: I got it.

6 I'll get these guys. Let's get them doing.

7 MS. DEVINE: Are we taking a break?

8 DIRECTOR JOHNSON: How are you? Good.

9 We're a little pressed, so I'm going to  
10 distribute these. We do have you on the big  
11 screen, and we can change those slides whenever  
12 you'd like.

13 MR. HOLMES: Yeah, let's do it.

14 DIRECTOR JOHNSON: All right. Dan, let's  
15 get these guys going.

16 MR. HOLMES: Guys, you've been through the  
17 drill before. Half an hour, inclusive of Q&A.  
18 I'll turn the floor over to you.

19 MR. MEYER: Thank you. It's nice to be  
20 here. Nice to be behind this podium again now.  
21 It's been I year, I guess, since I was here last.  
22 I'm John Meyer from Loomis.

23 So great to be here. Thank you for the  
24 opportunity to present on large cap growth in  
25 addition to the core-plus mandate that we manage

1 currently for the Board.

2 I'm joined by John O'Shea of the growth  
3 team. I'm going to go through some overview of  
4 Loomis, although you know the firm already. I'll  
5 give you a quick reminder. I'll introduce John.  
6 He's going to get to the meat and potatoes of  
7 large cap growth rate.

8 MR. O'SHEA: Loomis is an old firm. We were  
9 founded in 1926, making us one of the oldest in  
10 the nation. We're a stable company, established.  
11 We manage \$255 billion in assets, the majority of  
12 which are institutional assets. \$40 billion are  
13 public-fund related. We take our commitment to  
14 public funds very seriously, acting as a  
15 fiduciary. We've organized our business  
16 around -- Richard do you need one? A  
17 presentation?

18 CHAIRMAN TUTEN: There we are. Thank you,  
19 pal.

20 MR. MEYER: So the way we've organized our  
21 business at Loomis is to have individual strategy  
22 teams, independent and solely focused on the  
23 mandates that they manage, and then we give them  
24 deep resources.

25 For example, the growth team manages only

1 growth assets. That's all they do. We have an  
2 in addition, of course, the core-plus team which  
3 you know about where you've invested. So our  
4 revenue line is diversified. And we think that's  
5 a real advantage for clients because it allows us  
6 to continually invest in each one of these  
7 strategies in up markets and down markets.

8 Also, because our revenue is diversified, it  
9 allows us to have long-term perspective in  
10 setting fees. We've priced this mandate  
11 competitively, which we can talk about after John  
12 presents. But we don't need to necessarily worry  
13 about keeping the lights on in up markets and  
14 down markets because we have this diversified  
15 revenue source. We feel that that's an  
16 advantage.

17 Now, John O'Shea joined Loomis a year ago.  
18 And you might say, what's a guy who just joined a  
19 year ago, how is he going to be an expert on the  
20 strategy?

21 Well, John joins as an expert. He came from  
22 JP Morgan Private Bank, and at the bank John was  
23 responsible for hiring and firing equity  
24 managers. So he's met with hundreds of equity  
25 managers over the course of his ten years at JP

1 Morgan. He's sat in your seat. I hope that his  
2 perspective is helpful.

3 He was in New Jersey at the time, a  
4 well-established job and perfectly happy.  
5 Although when he met the team, he said, if a  
6 position ever becomes available with the growth  
7 team of Loomis, he's going to take it. And a  
8 position did become available last year. He  
9 uprooted his family from New Jersey and brought  
10 them up to Boston where they're really just now  
11 getting fully acclimated. John works like a dog.  
12 He's in the office daily for 12, 13 hours, but  
13 it's clear that his passion is there for this  
14 strategy and his expertise.

15 Again, I hope that his perspective is  
16 helpful, as he sat in the seat that you're  
17 sitting in currently.

18 Are there any questions on the firm I can  
19 answer? Okay. Thank you.

20 MR. O'SHEA: Thank you so much. Good  
21 morning. We really appreciate the opportunity to  
22 present the large cap growth strategy.

23 I summarize kind of my transition is that  
24 the opportunity for me was enough to get a third  
25 generation Yankee fan to move to Boston --

1 (laughter) -- I'm still trying to sell my wife on  
2 the idea, but as far as the team enrolled, so far  
3 so good.

4 I thought we'd just jump ahead to slide 9,  
5 which is a snapshot of the team. So we manage  
6 three long-only strategies, all of which employ  
7 the exact same philosophy and process.

8 The large cap growth strategy is our  
9 largest, at about \$30 billion, and it's coming up  
10 on our 11th anniversary, which we'll cross in  
11 June.

12 So we recently announced that we were  
13 closing the strategy to new investors in 2017.  
14 And we did this not because \$30 billion  
15 represents the ceiling in terms of what we can  
16 manage. In fact, you know, our analysis suggests  
17 we can comfortably manage 60- to \$80 billion, but  
18 we've also held out to clients that we would be  
19 disciplined as far as managing the capacity of  
20 our strategies.

21 And not only that, but our investors are  
22 paid on the basis of their ability to outperform  
23 benchmark and peers, so we always want to  
24 maintain our flexibility to do -- to do just  
25 that.

1           The team, which you can see on slide 10, is  
2           led by a guy named Aziz Hamzaogullari. Aziz is  
3           the founder of our team, this philosophy and  
4           process. I say the founder because he literally  
5           created the strategy and he personally hired  
6           everyone who is part of the team.

7           Aziz and the team joined Loomis in 2010 from  
8           Evergreen Investment, which is another  
9           Boston-area investment firm. And Aziz had spent  
10          almost a decade previously at Evergreen. He was  
11          hired first in 2001 to be their senior technology  
12          analyst. And he was already practicing the  
13          philosophy and process we're going to discuss as  
14          an analyst then.

15          And the chief investment officer at  
16          Evergreen kind of quickly realized that what he  
17          was doing was unique, because within two years of  
18          his joining, they asked him to become Director of  
19          Research and to institutionalize for Evergreen  
20          firm the philosophy and process that he brought  
21          with him as an individual just two years earlier.

22          So he became Director of Research. He hired  
23          and trained ten analysts. And then in 2006, they  
24          promoted him to portfolio manager, which is when  
25          he launched the large cap growth strategy. And

1 when he launched the strategy, he was able to  
2 hand pick three analysts from the ten he had  
3 hired, mentored and trained over the prior three  
4 years.

5 So in the second row there, you'll see Brian  
6 Coyle, Peter Linnard, Rayon Ward. The senior  
7 analysts on the strategy have all been part of  
8 this since day one and have been working with  
9 Aziz for some 13 or 14 years now.

10 There's a total of six analysts supporting  
11 the team today. The three more junior analysts  
12 were all hired since the team joined Loomis, but  
13 even though Aziz tends to hired more junior  
14 people, from his time with -- as director of  
15 research, he realized it's kind of hard to  
16 unlearn bad investment habits that people pick up  
17 elsewhere. But he spends a tremendous amount of  
18 time getting the people part of the equation  
19 right.

20 For the last two hires, they estimate they  
21 spend two years and went through 900 résumés.  
22 And that's because he's not looking for people  
23 who all have Harvard MBAs. He's really looking  
24 for a unique set of characteristics. He wants  
25 people who are passionate about this business,

1 first and foremost, because that's the one thing  
2 you can't teach.

3 He wants people would can demonstrate that  
4 they're independent thinkers. You don't  
5 outperform the benchmark in markets by holding  
6 the same views as everybody else. You've got to  
7 be able to think differently.

8 And then, finally, he wants people who are  
9 team players. And so far so good, because in ten  
10 and a half years, nobody has ever left the  
11 investment team. And we think that's important  
12 because we really view our culture as a  
13 competitive advantage, and you can see elements  
14 of that culture on slide 12.

15 One going forward, if you don't mind. Thank  
16 you.

17 So our goal as investors is to generate  
18 superior risk adjustment returns. Now, the risk  
19 adjustment part of that requires that you have an  
20 equal focus on what can go wrong and what can go  
21 right. And for us, that starts with the team  
22 process.

23 So our analysts have areas of sector  
24 coverage responsibility where they, you know,  
25 take the lead now analyzing companies, but then

1 every idea is brought back to the whole team to  
2 deliberate. Aziz really values the diversity of  
3 perspectives that everybody brings. He doesn't  
4 want to just hear from people who agree.

5 Aziz makes the final decision for the  
6 portfolio, but what I think is important is he's  
7 not predetermining in advance what the outcome is  
8 going to be just because he's the portfolio  
9 manager.

10 And with every idea that's brought forward,  
11 the whole team sets out to disprove the  
12 investment thesis, really, as a way of ultimately  
13 showing how strong it is. How does this idea  
14 withstand every potential criticism, every  
15 objection that we can rise?

16 Now, the point of that is hopefully to help  
17 us guard against getting overconfident. So as a  
18 team, we don't spend any time trying to guess  
19 what a stock price is going to be 18 months from  
20 now. We don't claim to have any better view in  
21 that than the market does.

22 Instead, we understand that every potential  
23 investment has a range of outcomes. Where we  
24 spend all our time is making sure we understand  
25 what that range could be from best to worst.

1           And our compensation is specifically set up  
2           to incent this team's behavior, and that's  
3           because everybody is paid on the exact same set  
4           of results, which is overall portfolio  
5           performance.

6           So our analysts aren't compensated  
7           differently on the basis of how their stocks or  
8           sectors perform. They don't have any incentives  
9           to get their names in the portfolio. And the  
10          clients, you know, our clients don't care what  
11          analysts get their names in the portfolio.  
12          Everybody's shared incentive is to make sure that  
13          the best names get in the portfolio.

14          And the way that's measures is over three,  
15          five and ten-year performance periods, with a  
16          third of incentive compensation attributable to  
17          each of those periods.

18          So the bonus pool, which is the majority of  
19          what our analysts and Aziz get paid, two-thirds  
20          of that is on the basis of performance they  
21          generate for clients over five and ten years. So  
22          they're paid not to worry about the short-term  
23          noise, not to worry about this quarter or even  
24          this year, but to make the best long-term  
25          decisions for our portfolio and our clients.

1           We think that offers both important  
2 alignment with our clients. We're presumably not  
3 investing in equities because they're trying to  
4 satisfy 12- to 18-month observations, but also it  
5 offers alignment with our philosophy as  
6 investors, which we'll go into on slide 13.

7           So this is a little busy, but this  
8 represents what we call our alpha thesis. And  
9 the alpha thesis is based on a white paper we  
10 wrote, and it really tries to answer the  
11 question, why do we think we can continue to  
12 generate positive, excess returns without taking  
13 undue risks?

14           So what we laid out is, you know, what are  
15 our most deeply held investment beliefs? What  
16 are those reasons we think we can outperform on a  
17 going-forward basis. Those are the Tenets in  
18 column one. How we put those beliefs into  
19 action, that's the Process in column two.

20           And then, finally, what are some objective  
21 measures that investors can use to assess, you  
22 know, the integrity of our process from  
23 philosophy to outcome. Those are the Proof  
24 Points in column three.

25           So I'm just going to touch on three in the

1 interest of time, but for us it starts with our  
2 time horizon. We are truly long-term investors.  
3 We want to capitalize on the secular growth  
4 opportunities that we identify, but also take  
5 advantage of the market's often shortsightedness.

6 So, very simply, that process for us is what  
7 we call time arbitrage. What we mean by that is  
8 we think markets are efficient over the long  
9 term, but investors who have far shorter time  
10 horizons overreact to news or events which  
11 doesn't fundamentally impact the intrinsic value  
12 of companies over longer periods of time, and so  
13 it kind of creates price dislocations in the  
14 stock.

15 So what will you expect for a long-term  
16 investment practice and time arbitrage? Well, I  
17 you'd expect we'd have low portfolio turnover.

18 In the ten and a half years we've been  
19 managing this portfolio, the turnover has been  
20 around 15 percent. That means our average  
21 holding period for any stock in the portfolio is  
22 over six years.

23 If you compare that with the average large  
24 cap growth manager in our universe, they can be  
25 annual turnover, 80 to 100 percent, which equates

1 to a 10- to 18-month time horizon. That to us is  
2 trading. That's not investing.

3 So what does that feel like if you invest in  
4 our strategy? It can feel pretty dull. In the  
5 last -- in 2016, we only bought two new companies  
6 for the portfolio. And the year before that, it  
7 was just one. I think in the last four years  
8 we've only bought seven new companies.

9 This is a team that's truly patient and  
10 disciplined, and we often do our homework years  
11 before the market actually gives us the chance to  
12 own companies with the characteristics we seek,  
13 but at the prices we're willing to pay.

14 So case in point, the only two companies we  
15 added in 2016, in each of those cases, our  
16 original research report was done on them five  
17 years earlier, in 2011.

18 Another brief and differentiator for us is  
19 our quality focus. So when we think about what  
20 we want to own, we don't start with what's in the  
21 benchmark. We don't care what the fixed holdings  
22 are. We don't care what the sector weights are.  
23 Our willingness to own a company is based on its  
24 quality attributes.

25 And I'll talk more about what that means to

1 us, but simply put, a quality business to us is  
2 one that would be difficult, if not impossible,  
3 to replicate. So that's the first question our  
4 analysts ask about any company. Is this a  
5 differentiated and defensible business, or could  
6 somebody come along and replicate it?

7 The outcome of that is we have high active  
8 share. And active share is a concept that just  
9 measures how different your portfolio looks from  
10 the benchmark. High active share means you look  
11 very different from the benchmark.

12 So there's a body of academic literature  
13 which suggests that high active share is  
14 predictive of outperformance. That may be going  
15 a little bit far. We view it as necessary, but  
16 not sufficient. It makes sense to us that, to  
17 bet the benchmark, you have to look different  
18 from the benchmark and we always have.

19 And I think it makes sense. We don't start  
20 with the benchmark when we build portfolios.  
21 We're looking for a handful of uniquely  
22 advantaged companies who wind up looking  
23 different as a result.

24 And final one, and I'll touch on this slide  
25 at the bottom row, we have an absolute risk

1 focus. Risk to us means permanent loss of  
2 capital. It doesn't mean short-term  
3 underperformance. It doesn't mean elevated  
4 tracking errors to the benchmark. It doesn't  
5 mean sector deviations.

6 In our view, the benchmark itself is a risky  
7 asset. A capitalization way to benchmark, like  
8 the S&P 500 or Russell 1000, by design, they hold  
9 more of the stocks and sectors that are going up  
10 most in price, regardless of whether or not the  
11 intrinsic value of those companies are going up  
12 at the same rate.

13 So if you, as an active manager, tie your  
14 risk management framework to, you know, staying  
15 within the parameters of an already risky  
16 benchmark, our way of thinking, that forces you  
17 to take on valuation risks that we're not willing  
18 to assume.

19 Oh, and by the way, looking like the  
20 benchmark didn't keep you from falling 38 percent  
21 in 2008.

22 So we have an active approach to risk  
23 management and informs every decision we make.  
24 The outcome is that our volatility has been lower  
25 than two-thirds of our peers and in line with the

1 benchmark over the last ten and a half years,  
2 despite having only 30 to 40 stocks in the  
3 portfolio.

4 Our risk adjusted returns, sharp ratio,  
5 information ratio, alpha, have all been either  
6 first or second percentile, which I think  
7 suggests that we've been well compensated for the  
8 risks that we do take in portfolios.

9 So how do we do it? If you want to kind of  
10 sum up most simply who we are as investors, it's  
11 the first statement on slide 14. And that's, you  
12 know, we're an active manager with a long-term  
13 private equity approach to investing in public  
14 markets.

15 So what do I mean by private equity  
16 approach? Well, we want to be part owners in a  
17 handful of great businesses, and we access those  
18 businesses as if we were going to lock up our  
19 capital for a minimum of five years. No public  
20 market for those shares.

21 So to be willing to make that commitment, we  
22 insist any company have three characteristics,  
23 all of which have to be present at the same time:

24 High quality, sustainable growth, and then  
25 compelling valuation. And we don't allow for any

1 trade-offs.

2 So we don't care how cheap a company is. If  
3 it doesn't meet our quality criteria, and we  
4 don't care how fast it's growing, if we think  
5 it's expensive.

6 And the way we decide whether or not a  
7 company meets those criteria is to go through a  
8 seven-step research process which you see on  
9 slide 15.

10 So the output of this process is usually a  
11 30- to 100-page report the analysts will write.  
12 And the purpose isn't to have a big impressive  
13 report, because, in truth, we don't share them  
14 with anybody but ourselves.

15 The purpose is to make sure for any  
16 investment, we're asking all the right questions  
17 and then answering them to our satisfaction. And  
18 those questions start with the company's quality  
19 attributes.

20 So quality to us is really a powerful  
21 combination of traits. It includes having  
22 advantages in the business. It includes the  
23 dynamics of the industry that they operate in.  
24 It includes their cash-flow generation ability.  
25 We have a real focus on companies that are

1 self-financing, that don't rely on markets to  
2 fund their profitable growth opportunities.

3 It includes the leadership qualities, the  
4 management teams. We want to invest alongside  
5 management teams who are not only aligned with  
6 shareholders, but thinking about in terms of  
7 decades, not next quarter or next year.

8 In fact, 40 percent of our portfolio is  
9 actually invested in companies that are still run  
10 by their founders. In our experience, these are  
11 people who think about building businesses to  
12 last for generations and making decisions on that  
13 basis, and not managing to short-term Wall Street  
14 earnings targets.

15 So usually when we find that combination of  
16 characteristics in the same place, what you get  
17 is a business model that would be difficult, if  
18 not impossible, to replicate.

19 So I think an easy to understand example  
20 from our portfolios is probably Visa, which we've  
21 owned since their IPO in 2008. If you think  
22 about trying to replicate Visa, well, you know,  
23 you'd have to have a trusted global brand, which  
24 they've spent decades building.

25 You'd have to replicate their client

1 relationships, which include 16,000 banks, who  
2 have worked with Visa on average for ten years.  
3 You would have to replicate their merchant  
4 relationships, which are over 35 million  
5 merchants in over 200 counties.

6 So, hopefully, it's pretty easy to see Visa  
7 would be a tough business to replicate. And if  
8 you look at the industry that they operate in,  
9 that quality is kind of -- is mirrored because  
10 between the top four competitors, Visa,  
11 MasterCard, American Express, Discover, market  
12 shares are incredibly stable going back for  
13 decades. They can't even steal market share from  
14 each other. So that's a real element of quality  
15 and stability.

16 Contrast that with a company we've never  
17 owned, which is Apple. And to many investors,  
18 Apple is the poster child for a quality growth  
19 company over the last ten years. And there's  
20 definitely a lot to like.

21 But unlike Visa, which operates in a very  
22 stable end market, think about Apple's primary  
23 end market. It's the handset market. It's the  
24 iPhone.

25 I heard this morning on TV that analysts now

1       estimating it's now 80 percent of their business.  
2       So think about what's happened in that market  
3       over the last 10 to 15 years.

4             Anybody ever have a PalmPilot, Nokia,  
5       Motorola flip phone, BlackBerry? You know, kind  
6       of all one-time leaders who have come and gone by  
7       the wayside.

8             So Apple came in, tremendously successful  
9       with the iPhone, continues to be successful, but  
10      even after Apple's success, Samsung was able to  
11      come in as a new entrant and take 50 percent  
12      market share in a five-year period.

13            We don't think there's another company in  
14      all of our portfolio where a new entrant could  
15      come along and take 50 percent market share in  
16      five years.

17            Why is that so important when you're  
18      thinking about Apple? Well, again, the iPhone is  
19      80 percent of their business these days. So it's  
20      not that we haven't seen the upside now. We've  
21      always seen the upside.

22            But we're just not willing to own a business  
23      where so much of their valuation is tied to an  
24      end market that's shown such dramatic and  
25      unpredictable shifts in leadership.

1           And if it's not -- if it doesn't meet our  
2           quality criteria, we set it aside. If it does,  
3           then we're equally concerned with growth.

4           And with growth, we're looking for two  
5           things: That they be profitable and they be  
6           sustainable. And when we talk about  
7           profitability, we're focused on cash flows, like  
8           private equity investor.

9           I want to see cash flow return on the  
10          invested capital that's greater than the  
11          investor's cost to that capital.

12          So we don't look at any counting base  
13          measures of earnings, like price to earnings.  
14          You know, they can diverge from the underlying  
15          cash flows and they can be manipulated by  
16          management.

17          We also require that the growth be  
18          sustainable. Usually that means that it's  
19          secular or structural in nature. So we're not  
20          betting on a product cycle. We're betting on  
21          changes in the way people live. Changes in the  
22          way business is conducted.

23          So for Visa, it's this shift from paying by  
24          cash and checks to digital payments. For an  
25          Amazon, it's a shift in traditional

1 brick-and-mortar retail to online retail. For  
2 Google, it's the shift from online -- or  
3 traditional advertising to online advertising.

4 You know, these are structural growth  
5 drivers that we think are likely to be in place,  
6 as strong or stronger, five or ten years down the  
7 road.

8 So we spend all our time building a library  
9 of companies that meet our quality and growth  
10 criteria, but even then that's not enough for us.  
11 Just because you're a growth manager doesn't mean  
12 what you pay for something isn't important.

13 So we insist that any company we buy trades  
14 at what we call a margin of safety, or a  
15 substantial discount to our estimate of its  
16 intrinsic value.

17 If you go two slides forward, I think that  
18 will give you a graphic sense of how we think  
19 about that.

20 So quality and growth determine what we want  
21 to own, but valuation is the sole determinate of  
22 when we're willing to own it and how much of it.  
23 So we think the risk of owning a high-quality,  
24 secular growth company is lower after its price  
25 has gone down. As a result, we're often buying

1        else say this today. We'll root for the stock  
2        price to go down because we're only willing to  
3        take a full position, which for us is 5 percent  
4        of cost, when we think the market's expectations  
5        are still pessimistic that it reflects our  
6        worst-case scenario for that company. And even  
7        then we still want to see at least 40 percent  
8        upside to the base case.

9                So now, remember, we've done our homework.  
10        We might have followed these companies for years.  
11        And like Warren Buffett, we want to own more of a  
12        high-quality company when its price is low.

13                In addition to want to see that big discount  
14        to intrinsic value, we also want to see an  
15        asymmetric reward to risk, upside to downside.  
16        At least 2 to 1 upside to downside, preferably  
17        twice that.

18                All things equal, if we just bought at the  
19        worst case and the stock starts appreciating  
20        towards our base case, where your remaining  
21        upside starts to shrink and your downside starts  
22        to grow again, we're trimming out of it.

23                When it hits our base case, it's out of the  
24        portfolio altogether. We won't own a company  
25        that trades above our view of intrinsic value.

1 That's how you protect against permanent loss of  
2 capital.

3 At the outcome of that is we have a very  
4 different performance pattern than most growth  
5 managers. Most growth managers do well in one of  
6 two environments: The momentum guys tend to do  
7 well in rising markets, while your defense  
8 managers tend to do well in falling markets, but  
9 they don't participate as well on the upside.

10 Historically, we've done well in both  
11 markets. And if you flip over to slide 28.

12 So this second and third to last columns on  
13 slide 28 show our performance in up and down  
14 markets. I'm sorry. It's one forward of that, I  
15 believe. It's the other way.

16 So in up markets, we've historically  
17 captured over 104 percent of the market's gains,  
18 which is better than 70 percent of our peers.  
19 But in down markets, we've fallen 8 percent less,  
20 which is better than over 85 percent of our  
21 peers.

22 Our signature performance period in that  
23 regard, if you can flip back one side, was 2008,  
24 2009. In a way, we fell 28 percent, which was  
25 painful, but that was far less than the

1 benchmark, which was down 38 percent. And,  
2 really, if you're thinking about down market  
3 performance in the last ten years, '08 is really  
4 what matters in that regard because that was the  
5 one glaring instance we had.

6 But we outperformed -- we also outperformed  
7 in 2009 when we returned 41 percent versus about  
8 37 percent for the benchmark. So you see that  
9 characteristic outperform in both up and down  
10 markets.

11 What that meant is if you owned our strategy  
12 from January 1 of '08, and held it through 12/31  
13 of '09, over those two years, and you can do the  
14 math, at the end of that period you would have  
15 come out with a little more than a hundred cents  
16 on your dollar. You would have had a slight  
17 profit after what was the greatest draw-down  
18 we've experienced in this country since the Great  
19 Depression.

20 We think that's a pretty good outcome. And  
21 it didn't come because we predicted financial  
22 crisis and repositioned the portfolio. We didn't  
23 move to cash. It comes from two things:  
24 Insisting that every investment have the  
25 simultaneous presence of quality growth and

1 valuation, and then taking an absolute rather  
2 than relative view of risk.

3 I've just got two more pages I want to touch  
4 on. To help think about how we think about risk,  
5 if you go to slide 22, I believe, or it might be  
6 23. That one, please. Thank you.

7 So this represents our portfolio, which  
8 today has 33 different holdings but which have 24  
9 different business drivers.

10 So after deciding what we want to own on the  
11 basis of quality growth and valuation, then we  
12 want to make sure that our best thinking from a  
13 bottom-up basis won't let us be over-concentrated  
14 in any one risk.

15 So for every company, we say, what's the  
16 growth driver that has the biggest impact on how  
17 that company is valued? And then I don't want to  
18 have more than 15, 20 percent tops of my  
19 portfolio exposed to any one growth driver.

20 So in the middle there you'll see Online  
21 Advertising at 12.1 percent. Well, that  
22 represents our investments in Google and  
23 Facebook, both of whom derive greater than 90  
24 percent of their revenue from online advertising.  
25 And that's the largest exposure we've ever had

1 historically. We've never even gotten up to 15  
2 percent.

3 But we think this is a more intuitive way to  
4 think about risk. If you look at the benchmark,  
5 the benchmark will tell us that our investment in  
6 American Express is a financial company, but our  
7 investment in Visa is a technology company.

8 Well, to our way of thinking, they both have  
9 the same underlying risk, which is the continued  
10 shift from cashing checks to digital payments,  
11 which we categorize here as global payments.

12 Now, if you were to take a benchmark central  
13 to your risk, which I think you can see on slide  
14 32, and this is the last page I'll speak to  
15 before taking questions -- it's one more forward.  
16 I'm sorry. That one.

17 So you could rightly say, well, John, look,  
18 you've got 42 percent of your portfolio in  
19 technology versus just 31 percent to the  
20 benchmark. You go, how are you going to tell me  
21 that's not risky?

22 Well, we do have 42 percent in technology.  
23 It's 11 different holdings, but those 11 holdings  
24 have nine different business drivers, to our way  
25 of thinking. And, again, the risk to Visa to us

1 isn't the fact that it's a technology company,  
2 it's continued growth in digital payments.

3 The risk to a Facebook isn't going to affect  
4 the technology company. It's continued growth in  
5 online advertising. The risk to Qualcomm is  
6 continued growth in mobile devices.

7 So it's entirely possible the market  
8 decides, as it seemed to after the Trump election  
9 in Q-4, that it doesn't like technology stocks,  
10 and all those stocks trade as if they've got the  
11 same underlying risk.

12 But we know markets are efficient over time,  
13 and we know that these drivers, you know, will  
14 come from a diversified set of sources. And when  
15 do you really care about diversification? Well,  
16 you care about diversification when markets are  
17 falling. And I think our performance in down  
18 markets really kind of bears out the wisdom of  
19 this.

20 My last point I'll make. Just so you don't  
21 think that 42 percent in technology is a view of,  
22 hey, technology is where you want to be in 2017  
23 if you want to outperform, when I look at our top  
24 ten holdings -- okay, so Amazon is not a  
25 technology company, although, you know, it's a

1 consumer discretionary company -- but we've owned  
2 that since portfolio inception, ten and a half  
3 years.

4 Facebook, we've owned continuously since the  
5 IPO in 2012. Alphabet, we've owned for ten and a  
6 half years. Cisco, ten and a half years. Visa,  
7 Alibaba since their IPO. Qualcomm, Oracle, ten  
8 and a half years.

9 What I would leave you with is I think this  
10 is a team that's been really, really good at  
11 identifying companies that have the quality  
12 characteristics that allow them to remain leaders  
13 in their space, that have secular growth drivers  
14 that in some cases made attractive investments  
15 ten years ago, and we think ten years forward,  
16 and yet because the market is so shortsighted,  
17 they systematically underappreciate the  
18 open-ended nature of the growth opportunities  
19 they have.

20 And I apologize. I seemed to have gone a  
21 little bit over, but I'd love to take any  
22 questions that you have.

23 MR. HOLMES: What's the fee structure?

24 MR. MEYER: The fee structure is, for the  
25 commingled institutional trust, which is where

1 the city is planning to invest, we've discounted  
2 that to 45 basis points on the first hundred  
3 million, and 40 above that.

4 So assuming about \$80 million, and I know  
5 that Dan has presented this in the search  
6 material as well, that's about 43 basis points.

7 MR. HOLMES: That's on both -- the assets of  
8 both systems combined, right?

9 MR. MEYER: That's correct. So we'll  
10 aggregate those assets together, as we do on a  
11 fixed income mandate as well, which results in a  
12 net lower fee.

13 MR. BROWN: And since inception, your large  
14 cap growth composite has been in the top 1  
15 percentile? Did I read that right?

16 MR. MEYER: Yeah, gross. And that was on --

17 MR. BROWN: Gross of fee.

18 MR. MEYER: -- 33. I think the gross  
19 returns have been 1st percentile. Risk adjuster  
20 returns have equally been about 2nd percentile.

21 MR. BROWN: Okay.

22 MS. DEVINE: And those returns reported from  
23 Wells Fargo?

24 MR. MEYER: No. So the -- the team has an  
25 institutional track record, which is get to

1 compliant. If you're looking at just the fund,  
2 though, Aziz only took over management of the  
3 fund in 2010.

4 So -- I'm sorry. Yes is the short answer to  
5 your question. He was able to take his  
6 institutional track record with him.

7 MS. DEVINE: They didn't maintain any  
8 strategy over at Evergreen he may have created  
9 there, because he was the director of research  
10 and then created this, but he didn't leave  
11 anything there? He brought everything over,  
12 including all the folks?

13 MR. MEYER: He left Evergreen on one day and  
14 invested in Loomis the next day, and then all the  
15 decision-makers who were part of that strategy at  
16 Evergreen came with him. So that's why we were  
17 able to get in compliance for the full track  
18 record going back ten and a half years.

19 MS. DEVINE: Okay.

20 DIRECTOR JOHNSON: All right. We appreciate  
21 it. Thank you for coming in.

22 MR. MEYER: Thank you for your continued  
23 business, and thank you for having us here today.

24 DIRECTOR JOHNSON: Thank you.

25 (Off the record)

1 MR. HOLMES: All right. So half an hour for  
2 presentation, including some Q&A. We'll probably  
3 save questions to the end so we don't interrupt  
4 the flow.

5 CHAIRMAN TUTEN: Okay. You guys ready?

6 DIRECTOR JOHNSON: Yes, sir.

7 CHAIRMAN TUTEN: Okay. Perfect. We've been  
8 sitting down for three hours, so if we stand up,  
9 walk around a little bit, don't be offended.

10 MR. KOLANKO: All right. My name is  
11 Joe from Sustainable Growth Advisers. I have  
12 Rob Rohn. Rob is an analyst first and foremost.  
13 He's a portfolio manager and cofounder of our  
14 firm. And we want to thank the police and  
15 firefighters of the City of Jacksonville and  
16 Summit Strategies for having us here.

17 My in-laws live just down the road on 95,  
18 and I get brownie points from my wife for coming  
19 to visit them when I'm in town. So I like to do  
20 that more often.

21 With that, I'll leave it to Rob. Rob will  
22 keep the remarks brief, and I look forward to  
23 your questions.

24 DIRECTOR JOHNSON: Thank you.

25 MR. ROHN: So I'm Rob Rohn, one of the

1 founders of SGA. It's great to be here today,  
2 although I'm not getting brownie points for being  
3 down here. But it is good to be here. We're  
4 really happy for the opportunity.

5 I'll be brief. Really, I should cut it  
6 shorter than I had planned to before because I  
7 think it sounds like you are kind of pressed for  
8 time, and get to what is on your mind in terms of  
9 questions. I'll probably refer to a half dozen  
10 or so slides in the book, so I'll give you a  
11 heads up on that.

12 So it's now been 15 years, which is amazing  
13 to me. But I started the firm with my partners,  
14 George Fraise and Gordon Marchand, about 15 years  
15 ago. We started the firm really with the idea  
16 that we -- quote, this was our mission statement:  
17 We want to do the job right.

18 And what we meant by that was we had been  
19 working together at one firm. We've worked  
20 separately at other firms, all with a similar  
21 investment philosophy, which we saw work really  
22 well over time. But we felt that the execution  
23 could be improved upon, so we started SGA.

24 Doing the job right for us means, you know,  
25 you really focus and bear down on -- it's hard

1 enough to do one thing right. So you really  
2 focus on what you want to do. You have a well  
3 defined, time-tested investment philosophy that  
4 you know you've seen through empirical evidence  
5 works. And as I said, you know, in our  
6 respective 30-year careers, we've seen it work.

7 You want to make sure you have a systematic  
8 process so you minimize mistakes, because we all  
9 are prone to those, especially in the financial  
10 markets.

11 You want to hire good people. You've got to  
12 motivate them properly, and that just doesn't  
13 mean, you know, pay them. It means, you know,  
14 you've got to motivate them to work together.

15 And really important to us, you have to  
16 structure an organization so that everybody is  
17 motivated to work together, and is closely  
18 aligned to your clients, so you're in a real  
19 partnership with your client. So that was our  
20 goal.

21 Specifically, our philosophy is on page 2.  
22 It is to find the best sustainable growth  
23 businesses -- and I'll define that in a minute --  
24 and attach our clients to them through the  
25 ownership of their equity.

1           And you want to do that under the right  
2           circumstances when, you know, you have a real  
3           opportunity to make money, when the valuation is  
4           good. And a valuation based on cash flow is most  
5           important to us.

6           The idea here is that if you attach yourself  
7           to really good businesses that are predictable  
8           and can grow at a good clip, somewhere in the  
9           double digits, you should -- you should have  
10          appreciation in your portfolio that is  
11          commensurate with those returns, somewhere in the  
12          double digits.

13          As I think Warren Buffett said, you know,  
14          that sounds simple, but it's really hard on the  
15          execution. Probably the best way to visualize  
16          what we're trying to do is on page 3, the bend  
17          diagram on page 3. We're trying to operate in  
18          the sweet spot in the intersection of these three  
19          circles.

20          We're looking for businesses to attach you  
21          to that are very high quality, and by that we  
22          mean they're highly predictable. They have  
23          sustainable growth. They can sustain growth over  
24          a long period of time, and we can see that  
25          continuing for three, five, even ten years.

1           We found, as analysts, and as Joe mentioned,  
2 we're all analysts first, the attributes that are  
3 highly correlated with that are things like  
4 pricing power.

5           Think of -- I was walking through the  
6 airport this morning. Think of Starbucks selling  
7 a unicorn macchiato for \$5, or what I usually  
8 buy, a grande latte for \$3. So they can sell all  
9 of us those things when we used to be able --  
10 when you can buy -- when you can get a cup of  
11 coffee at home for less than ten cents a cup.

12           Recurring revenues are another predictor of  
13 sustainable growth. So if you have a business  
14 where you don't have to rebuild your business  
15 every year from scratch. Think of Visa, who just  
16 reported last night so it's top of the line.  
17 They grew their revenues 20 percent. Probably  
18 about 95 percent of their business recurs every  
19 year.

20           You just keep swiping your card the same  
21 amount of time, but because credit card use is  
22 growing as a percent of tender currency, you  
23 know, they just have to work on driving that  
24 increment every year. They're not starting from  
25 zero and building their business every year.

1 That's recurring revenue.

2 And financial strength. That, to us, means  
3 that if you -- you have a business where you  
4 don't have to reinvest all your cash flow in your  
5 growth. There's a lot of free cash flow.

6 And a good example of that might be -- I'm  
7 not sure if you've heard of the company,  
8 Salesforce. They -- instead of -- they're a  
9 sales force automation company, but instead of  
10 selling you software that you have to install on  
11 your server and put in your back office, they  
12 sell you a subscription.

13 They collect that up front. They get the  
14 cash flow, and therefore their free cash flow is  
15 actually a lot higher than their reported  
16 earnings. So quality -- those are the kinds of  
17 things we look for to identify quality or  
18 predictability or sustainable growth.

19 We do want growth. Typically we want to see  
20 within the portfolio at least twice nominal GDP  
21 growth, or twice what you can get in the indices.  
22 The index growth, for instance, the S&P or the  
23 Russell 1000 has grown 5 to 7 percent over time.  
24 So we're looking for double-digit earnings growth  
25 within the portfolio.

1           And then valuation. We want to make sure  
2           that, for instance, we can earn a good discount  
3           rate. But, for instance, at this point in time,  
4           you can actually buy this portfolio at a discount  
5           to the overall market, which means you've got a  
6           better chance -- not only do you have higher  
7           quality, better growth, but you also have a lower  
8           valuation, a better chance of earning that  
9           double-digit growth over time.

10           Let's look at the output of the process on  
11           page 4. So on that top line chart you can see  
12           that we actually have delivered. This is the  
13           actual earnings growth behind the portfolio over  
14           time. 13.6 percent, about twice that of the  
15           Russell 1000 growth.

16           Perhaps the most important part of what we  
17           do, though, is not necessarily the growth or even  
18           the return. It's the relative risk. So that  
19           growth of 13.6 percent in earnings has come with  
20           a lot lower volatility than the index. You can  
21           see that in the right-hand bar chart.

22           The returns have the same pattern, not to  
23           the same magnitude, better returns over time with  
24           lower volatility.

25           On page 5 you can see the returns by year.

1 Over time we have -- over market cycle, which we  
2 consider to be five, ten years, we've delivered  
3 that double-digit return, which is the goal,  
4 commensurate with the growth behind the  
5 portfolio. And we've done that with a lot lower  
6 volatility.

7 Probably the best measure of volatility or  
8 risk from our perspective is very simply downside  
9 capture. And I'm on page 6. So what that simply  
10 means is when the market goes down, we go down a  
11 lot less.

12 The reason that is important is you never  
13 know when you have to draw, for instance, on your  
14 particular -- on your funds. It's pretty  
15 inconvenient and it's difficult for your planning  
16 purposes to have to deal with volatility on the  
17 downside.

18 And, of course, you know, the old adage, if  
19 you go down 30 percent, you have to appreciate 50  
20 percent just to get back to even. So that  
21 volatility is important.

22 So that's a bit of the output of the  
23 process. Let me -- maybe some other  
24 distinguishing -- just cutting to the case, some  
25 other distinguishing features of the

1 organization.

2 We've been very stable. There's been no  
3 turnover on our investment team. We know that's  
4 very unusual in our industry. It's a function of  
5 a couple of things from my perspective.

6 Number 1: We've hired people very  
7 carefully. When you start from scratch, that's a  
8 great advantage. We hire people for a one-year  
9 trial period before we make a long-term  
10 commitment to them and them to us.

11 At that point we give them the opportunity  
12 to buy equity in the firm. So most of the  
13 employees of the firm are shareholders. And  
14 that's a great way to have long-term stability.  
15 They really are locked in and committed.

16 19, I think, Joe, of our 23 employees? So  
17 it's not just an investment team. It's everybody  
18 in the organization. 19 of the 23 employees  
19 right now are shareholders of the firm.

20 We work in a team-based culture, and  
21 that's -- you know, you hear a lot about, you  
22 know, team-based approaches. It's not just  
23 because it's fun. It is more fun. But it's not  
24 just because it's fun.

25 It's also because, as I mentioned earlier,

1 we know that this process works, but you have to  
2 go about it in a systematic way to minimize the  
3 opportunity for mistakes, because it's easy to  
4 make mistakes, I think, in the financial world.  
5 There's a lot of pressure. There's a lot of  
6 noise. A team-based culture gives you  
7 redundancy.

8 So, for instance, every person on our team  
9 is primary analyst on some companies that we  
10 invest in, but then we assign a backup analyst.  
11 And the whole team gets together often and  
12 discusses our decisions before we make final  
13 decisions. That really gives you at least three  
14 layers of redundancy and judgment before we make  
15 portfolio management decisions.

16 You can really maximize that benefit. You  
17 can think about if -- if you've hired the right  
18 people. So we've been very deliberate in who  
19 we've hired. You can look on page 7.

20 We tried to hire people who are -- I'm sure  
21 a lot of you have heard of Snapchat. They went  
22 public recently. And Evan Spiegel, who is the  
23 CEO, says it's very important to him to hire  
24 people who are T-shaped. That's kind of what  
25 we've done all along.

1           If you look on page 7, you'll see people  
2           like Alexandra Lee, who is a formal medical  
3           doctor; Kishore Rao, who founded an information  
4           technology before we hired him out of his VC  
5           firm; Gordon Marchand, who is the past -- one of  
6           my cofounders who's the past chairman and  
7           president of the IAA, the association which  
8           governs our industry and is a real authority on  
9           best practices. He's also a CPA.

10           HK Gupta, who's got a master's in computer  
11           science, worked at Amazon for three years before  
12           he joined us; Luying Wang, who we just hired who  
13           has a master's in industrial engineering.

14           So if you have these people around the table  
15           and that redundancy in your process where you've  
16           got a primary backup and then everybody is  
17           weighing in, you get a lot of different  
18           perspectives on the problem and I think you  
19           minimize mistakes.

20           We've got a great set of clients. I don't  
21           know whether you know this, but we are only -- we  
22           only an institutional only firm. We only have, I  
23           think -- what is it now, about 50 client  
24           relationships?

25           MR. KOLANKO: 60 client relationships. Our

1 newest account was Coca-Cola Pension Fund gave us  
2 \$400 million to manage that we started earlier  
3 this month.

4 MR. ROHN: Sometimes I -- when we first  
5 started the firm, someone asked me, and before  
6 thinking, someone asked me, how's the new firm  
7 going? Before I could think, I said, it's great,  
8 we don't have any clients.

9 And what I meant was, that if I have few  
10 clients, you can really focus on working for your  
11 existing clients and making sure that you have  
12 mutual beneficial -- mutually beneficial  
13 relationships and you can focus on investing.

14 Some of the larger firms -- we have a lot of  
15 individual client relationships. I know. I've  
16 been there. It's very difficult to do that.

17 You know, the last thing I would say about  
18 us is we're structured to control risk. I think  
19 you've seen that in the -- you know, the risk  
20 metrics. That is our primary, I think, value  
21 added. We beat the market over since we started,  
22 beat the indices. But it's the low volatility  
23 which sets us apart, which really flows from  
24 every step in our process in that bend diagram I  
25 showed you earlier.

1           So I think what you can expect from us, and  
2           I think this is a real benefit to you, you have a  
3           pretty clear expectation. You can -- you can see  
4           that we've delivered pretty consistently returns  
5           in the double digits over market cycles. That's  
6           pretty rare these days. I think it's hard to  
7           find options to get that, and you can do it here  
8           with relative low volatility, i.e., risk.

9           We've -- you know, basically valuation right  
10          now to us looks attractive. I think for the  
11          overall market looks difficult. So I think it's  
12          a good time -- a good relative time to hire us.  
13          I think we can do a good job for you from here.

14          So I hope that we get a chance to work for  
15          you. That's it. Questions?

16          MR. BROWN: You may have mentioned it.  
17          Fees? Fee structure.

18          MR. ROHN: Yeah. Do you want to talk about  
19          that?

20          MR. KOLANKO: Let me find the slide here.  
21          We offer a standard fee schedule, which  
22          we've discounted. It's in this book over on page  
23          29, a standard fee schedule that we offer for a  
24          flat 50 basis points.

25          However, we would offer a performed-based

1 fee whereby you only pay 10 basis points unless  
2 we beat the market. And if we beat the market,  
3 we share in the revenue growth. And we actually  
4 cap it -- if we do really well, we cap that share  
5 so you don't have to pay anything additional on  
6 that. And you can see the details of that on  
7 page 29. So 10 basis points would be the fee.

8 MR. ROHN: And the reason for that is,  
9 during periods of time where we think it's a  
10 particularly good time, one of the biggest  
11 problems with this industry -- and I'm sure  
12 you-all are familiar with it -- is that often you  
13 get hired after a period of time when you've had  
14 really good performance. And that's usually a  
15 time when you can't do as good a job for your  
16 clients because, you know, you're operating at a  
17 relatively high level of valuation.

18 As I mentioned, we think it's a relatively  
19 good time to hire us. During those periods of  
20 time, we decide, well, let's -- we're willing to  
21 take on the risk of a performance fee as we are  
22 today.

23 CHAIRMAN TUTEN: Did you guys mention -- do  
24 you have any other public pension plans in the  
25 state?

1 MR. ROHN: Joe, you would know. We have  
2 other pension funds --

3 MR. KOLANKO: Public pension funds. Yeah,  
4 we have a couple of public pension funds and a  
5 couple of union pension funds --

6 CHAIRMAN TUTEN: Anybody in the state of  
7 Florida?

8 MR. KOLANKO: No. Not in Florida. No.

9 CHAIRMAN TUTEN: Okay. That's fine. I  
10 didn't see it in here. Just curious.

11 MR. LEWIS: So the 19 of 23 employees that  
12 own shares in the business, is that the entirety  
13 of your shareholder base or do you have any other  
14 passive shareholders?

15 MR. KOLANKO: So we have a passive  
16 shareholder called Estancia Capital. And we tend  
17 to think in ten-year chunks. So we started the  
18 firm and we did a ten-year strategic planning  
19 session where we thought about how many people we  
20 would need and all that stuff, what kind of  
21 expertise that we wanted.

22 We did that about five years ago on our  
23 ten-year university. I guess it was four years  
24 ago. And at that point we realized we needed to  
25 build out the operation side of our business,

1 client service side of our business.

2 At the same time they came in and said,  
3 we'll help you with all that for an equity stake.  
4 So they have a passive equity stake. They don't  
5 really have -- you know, we have board meetings  
6 with them periodically, but they don't have any  
7 measure of control over the business.

8 MS. DEVINE: What's the percentage?

9 MR. KOLANKO: 23.

10 MS. DEVINE: Has that come down? Has that  
11 moved up? What is that?

12 MR. KOLANKO: That's come down, and the  
13 reason it's come down is because they were  
14 willing to be deluded, as we all are, as we --  
15 you know, as we hire people, after a year we  
16 decide whether or not we're going to keep them,  
17 then at that point we decide -- you know, we let  
18 them buy shares at an insider price, and those  
19 shares delude everybody else.

20 So they get deluded -- they're on the same  
21 basis as everyone else. So they've been deluded  
22 over time.

23 MS. DEVINE: So they --

24 MR. SUGARMAN: This is Bob Sugarman, one of  
25 the lawyers.

1           Do they have the right or have they ever  
2           picked off any of your talent to move over to  
3           their other investments?

4           MR. KOLANKO: No. In fact, they've sent us  
5           talent. So they helped us hire our chief  
6           operating officer. And that was part of the  
7           reason we got involved with them. They gave us  
8           some good advice. And they -- you know, they  
9           send names our way. So it works in the other  
10          direction.

11          MR. SUGARMAN: Okay.

12          MR. KOLANKO: And they've actually -- you  
13          know, on the marketing side, they've done some --  
14          they've helped us with some strategic things.

15          Like, for instance, they found a  
16          distribution partner for our mutual funds so we  
17          didn't have to -- to worry about that.

18          MS. DEVINE: American Funds, American  
19          Beacon?

20          MR. KOLANKO: Yes.

21          MS. DEVINE: Yeah. And how is that going?

22          MR. KOLANKO: Slowly.

23          MS. DEVINE: Okay. In terms of your growth  
24          rates, are you purposefully trying to design a  
25          portfolio that's kind of 50-50 in terms of, you

1 know, anything greater than 15 percent and up, or  
2 2 percent below?

3 I see that you've currently got it kind of  
4 weighted 50-50. But is that purposeful or  
5 targeted, or is that something that's just  
6 bottoms up?

7 MR. KOLANKO: The short answer is no. It's  
8 really bottom up. So we build the portfolios  
9 from the bottom up. And then we, the three  
10 portfolio managers -- and I didn't mention this.

11 So there's redundancy in our research in  
12 that we've got the primary analyst, the backup  
13 analyst, and we've got the group discussing and  
14 they're all T-shaped, if you remember that point.

15 And then the portfolio manager decisions --  
16 it's three portfolio managers, the three  
17 founders, two out of three make the decision.

18 And what we do is we build the portfolio  
19 from the bottom up, and then we look at our  
20 decisions before we make them from the top down.  
21 We seek that balance within the portfolio.

22 But, you know, at certain times, you know,  
23 the high growers -- for instance, in 2008, 2009,  
24 the really high growers were relatively  
25 attractive to us. So we found ourselves with a

1 lot more high-growth companies in the portfolio.

2 Back in 2000, 2002, the really low -- you  
3 know, that was right after the -- you know, sort  
4 of the tech bubble. A lot of growth companies  
5 were highly valued. We found that the lower  
6 growth stuff was more attractive. So you would  
7 have seen a different mix at that time. And  
8 that's fine, because we want to -- you know, we  
9 want to optimize the opportunity in terms of  
10 valuation.

11 MS. DEVINE: And my last question had to do  
12 with Chipotle. It's in the portfolio.

13 How long have you held that, and have you  
14 gone for the ride or --

15 MR. KOLANKO: Yes. That's a great  
16 demonstration of perhaps, you know, the process  
17 at work.

18 So Chipotle. We decide what businesses we  
19 want to get involved with based on those  
20 characteristics that I talked about, the pricing  
21 power, repeat revenues and good financial  
22 characteristics.

23 Chipotle is one of them, but for the last  
24 seven years, it's been too expensive. We had it  
25 on -- we knew it was a business we liked. So we

1 did all the work. We got it on our -- what we  
2 call our qualified company list, a list of about  
3 100 companies.

4 We walk in every day with a menu of  
5 companies that we want to own. Sustainable  
6 growth businesses that we know, we can predict,  
7 and are low risk over time we can attach our  
8 clients to. And we're pretty sure we're going to  
9 get a double-digit return over time.

10 Chipotle is one of them, but it was too  
11 expensive and the risk was too high in the  
12 valuation.

13 They had a little problem, which we all read  
14 about. Hopefully we didn't experience it. The  
15 stock goes down a lot, and I guess that was the  
16 fourth quarter of 2015.

17 You know, we ramped up again. You know, we  
18 were pretty familiar -- we were ready, you know,  
19 we'd been doing the work on it -- because you  
20 always get an opportunity. You know, we don't --  
21 we find a great business, we want to get it on  
22 the list. We know we'll get a opportunity at  
23 some point.

24 We got our opportunity. We made sure that  
25 we'd done our due diligence, and we bought the

1 stock in the first quarter of 2016. So after it  
2 came down.

3 You know, our view is fundamentally, I can  
4 get into that, they have a -- they really do have  
5 a good -- they have a great brand, first of all.  
6 And, you know, it's taken a nick, but probably  
7 can recover as long as they don't have another  
8 mistake.

9 We -- you know, we did our due diligence to  
10 make sure they've reduced the probability of a  
11 food-borne incident from -- by a magnitude of --  
12 probably two orders of magnitude. So that's  
13 pretty good. And probably best in class in that  
14 regard now. And, you know, the operating  
15 economics, the free cash flow generation of those  
16 units is really terrific.

17 So we bought the shares. We're patient. It  
18 may take two or three years for the brand to  
19 fully recover. It's starting to happen. The  
20 comps are now positive, about 20 percent, and  
21 we're starting to make money.

22 MS. DEVINE: Thank you.

23 MR. HOLMES: Any nondollar exposure for ADRs  
24 or otherwise in your portfolio?

25 MR. KOLANKO: Yeah, there is. I mean,

1 we're -- you know, we do own multi-nationals and  
2 they have nondollar exposure. And, you know, we  
3 do own ADRs. I don't know what percentage of the  
4 portfolio it is right now.

5 MR. HOLMES: Is there a limit on the amount  
6 of international exposure?

7 MR. KOLANKO: It's usually mandated by the  
8 client. So some clients have as low as a 10  
9 percent mandate and we would just, you know,  
10 adhere to the mandate.

11 MR. HOLMES: What's the highest? If given  
12 full discretion, how high would you go?

13 MR. KOLANKO: 15 percent, I think. Yeah.  
14 The highest in our current mandates.

15 MR. HOLMES: Okay.

16 MR. SUGARMAN: Do you work with the  
17 Protecting Florida's Investments Act? You're  
18 experienced with that, the screens that that  
19 required? It would only relate to your foreign  
20 investments.

21 MR. KOLANKO: I didn't understand the  
22 question. Sorry.

23 MR. HOLMES: Are you familiar with the  
24 Protect Florida's Investments Act?

25 MR. KOLANKO: No, I'm not.

1 MR. HOLMES: And so if hired, we'll have to  
2 go through that.

3 MR. KOLANKO: Yes.

4 MR. HOLMES: There's some -- go ahead, Bob.  
5 I cut you off.

6 MR. SUGARMAN: But do you have the ability  
7 to set up screens, to screen out certain stocks,  
8 right?

9 MR. KOLANKO: Oh, absolutely, Bob. Yeah.  
10 And we -- actually, we do that periodically  
11 anyway. Most -- you know, identifying what we're  
12 looking for, these sustainable growth  
13 characteristics that make businesses predictable  
14 is largely judgment, but we do screens on our  
15 portfolios and we can screen for anything, if  
16 needed.

17 MR. ROHN: Yeah. And we have a number of  
18 socially responsibility portfolio mandates that  
19 have such screens. In fact, I believe we have  
20 one on common with Summit Strategies.

21 MR. SUGARMAN: Can you just tell the  
22 trustees about how much visits to do to companies  
23 a year and how else you get information, and also  
24 about how you vote your proxies?

25 MR. KOLANKO: Yeah.

1           So first of all, in terms of company visits,  
2           the goal is to sit down face-to-face at least  
3           once a year, have contact of one sort or another  
4           at least once a quarter.

5           Typically, you know, for some companies,  
6           Chipotle, for instance, we've probably had, you  
7           know -- we've probably had four or five  
8           face-to-face visits over the last year.  
9           Obviously, you know, that's a dynamic situation,  
10          and we've probably had, you know, a dozen  
11          conference calls.

12          So, you know, we don't want to mandate  
13          requirements, but that's generally the  
14          expectation and generally the practice.

15          With respect to proxies -- and how we do our  
16          research, that's a really important question. So  
17          we don't just listen to management either. I  
18          mean, obviously -- and you learn this over time  
19          talking to management. You know, they're pretty  
20          good at convincing you. They haven't gotten to  
21          where they are without good powers of persuasion.

22          So, you know, we always want to corroborate  
23          what they tell us elsewhere. One of the best  
24          ways we find to corroborate what management tells  
25          us is go talk to the competitors. So go talk to

1 Panera. Go talk to other restaurant companies  
2 about what really happened at Chipotle, and  
3 that's interesting.

4 And then you corroborate -- again, I love to  
5 think in threes. You want -- you want three  
6 layers. You want to talk to the management. You  
7 want to talk to the competitors, and then you  
8 want to corroborate elsewhere in the industry.

9 So we'll use outside parties sometimes to  
10 consult with just to corroborate what's -- you  
11 know, what we're hearing from management.

12 MR. ROHN: Also, just specifically in terms  
13 of company visits, we did a calculation.

14 In 2016 and through a portion of 2017, our  
15 analysts visited 212 companies that are in the  
16 portfolio and another 58 companies on the  
17 qualified company list that Rob alluded to.

18 In addition, another 50 visits to companies  
19 that are in our eco system that we have to follow  
20 in order to know about the companies we are  
21 investing in. So it's quite a robust group of  
22 research that we handle.

23 MR. KOLANKO: Our business model, I like to  
24 say, is that of a beehive. We're all the worker  
25 bees. We go out and we collect the pollen and we

1           come back and we make honey. Or we make money.

2           MS. DEVINE: Do you have a long-term up-down  
3 market capture?

4           MR. KOLANKO: I'm sure we do.

5           MS. DEVINE: You've got it? Great.

6           MR. KOLANKO: I mean, I think that's since  
7 inception, the one -- the downside capture  
8 produced. But the upside, we can -- we can get  
9 all those stats for you.

10          MR. ROHN: And usually what happens is on  
11 the downside, there's very good downside  
12 protection when the markets are generally having  
13 very strong periods of about, you know, 15  
14 percent return, like we've seen for the last five  
15 to seven years. We generally keep up with that.  
16 We may not necessarily beat the benchmark at  
17 that, but we'll pretty much keep up with that,  
18 that good solid return period.

19          MS. DEVINE: Upper 90s.

20          MR. ROHN: It's when you get into the  
21 volatile periods that we protect on the downside.

22          MR. LEWIS: Do you stay fully invested, no  
23 cash?

24          MR. KOLANKO: Yeah, pretty much. You know,  
25 we'll maybe have 3 to 5 percent frictional cash,

1 or maybe it's 2 to 5 percent, would be a good  
2 range to think about. But it's really your job  
3 to tell us what you want. Typically we're hired  
4 to be an equity manager. So we're going to be  
5 pretty fully invested.

6 And, you know, the other part of doing the  
7 job right is we -- when we started is being very  
8 honest with clients when you don't think you can  
9 make money for them.

10 In other words, when your valuation looks  
11 high. You know, really, in late 1999 -- I was a  
12 technology analyst in the '90s. You know,  
13 technology ran and it was really -- you really  
14 wanted to tell your clients to sell. And we did.  
15 And I'll never forget.

16 I had to get up at my old firm in front of  
17 700 people and told them that we sold Cisco  
18 Systems to buy Cisco, the food service  
19 distribution company. I think I was the only  
20 analyst in the world to follow both, speaking of  
21 being T-shaped. And they were quite angry with  
22 us, but that was the right thing to do.

23 And we want to be able to tell clients, hey,  
24 maybe you should have more cash. But that's  
25 really your decision at any particular point in

1 time.

2 MR. LEWIS: Thanks.

3 DIRECTOR JOHNSON: All right.

4 MR. HOLMES: Anybody else?

5 DIRECTOR JOHNSON: Thank you, gentlemen.

6 MR. KOLANKO: I tried to talk fast.

7 Hopefully I got it down for you.

8 MR. HOLMES: Thank you, gentlemen.

9 DIRECTOR JOHNSON: Thanks so much. We  
10 appreciate it.

11 MR. KOLANKO: Good luck in your  
12 decision-making. I know this is not an easy  
13 task. It's particularly not easy listening to us  
14 for a full day long.

15 CHAIRMAN TUTEN: All right. Are we going to  
16 wait on the advisory guys to deliberate?

17 MR. BROWN: Yes.

18 DIRECTOR JOHNSON: Yes. We're going to wait  
19 for the advisory guys to deliberate.

20 MS. DEVINE: Let's deliberate.

21 CHAIRMAN TUTEN: Deliberate quickly, please.

22 (Laughter)

23 MR. LEWIS: So with that --

24 MR. SUGARMAN: Mr. Chairman, may I ask that  
25 both the committee and the trustees give us a

1 first and second choice in case we're not able to  
2 reach a contract with the first choice? I don't  
3 expect that problem, but I wouldn't want to have  
4 to call another meeting in case it arose.

5 DIRECTOR JOHNSON: So you would like a first  
6 and second choice?

7 MR. SUGARMAN: Yes, please.

8 DIRECTOR JOHNSON: Can I make a comment too?

9 Our treasury, Joey Greive, has got at least  
10 one of these managers in his portfolio. It might  
11 be useful for your committee to hear how your  
12 deliberation went, how you made the decision,  
13 what you like about them. That insight might  
14 help these folks make a recommendation.

15 MR. GREIVE: Okay. Yeah. Sure.

16 MR. LEWIS: Joey.

17 MR. GREIVE: So we heard interviews. Much  
18 like you-all, we went through the process of  
19 looking hard at Brown several months ago. We  
20 made the decision to determine them as well.

21 And we interviewed a few managers, I believe  
22 two out of the three, who are on this list we  
23 interviewed.

24 What jumped out to us -- we ended up picking  
25 Loomis. It's public information. We picked

1 Loomis.

2 HS and Loomis are both highly concentrated  
3 managers. That's what we were looking for  
4 because we wanted to complement the indexing in  
5 our portfolio, which is very broad, very  
6 diversified, with some highly active managers  
7 would could generate alpha. And we felt that HS  
8 and Loomis were very close.

9 Loomis's fee was about half of what HS's is.  
10 That weighed pretty heavily in our decision in  
11 helping to keep fees low too over time.

12 So we chose Loomis. They told us that they  
13 would honor, you know, aggregated fees amongst  
14 the two plans.

15 But both HS and Loomis are very strong. I  
16 don't think you should make decisions just based  
17 on fees or just because the city, you know, chose  
18 to go in one direction. But those are my initial  
19 thoughts and comments.

20 You know, upside, downside market capture,  
21 on the seven year number with both of them are  
22 very, very close, almost identical. You know,  
23 the team at Loomis stood out as being very strong  
24 to us. The HS team also seems very strong.

25 What I liked about Aziz is that he was

1 raised in the school of hard knocks. You know,  
2 he came up -- he's got a lot of street cred, you  
3 know, in the investment world. He came up buying  
4 and valuing businesses within his family. So  
5 he's -- they've been very consistent and  
6 persistent over time. I remember that standing  
7 out to us.

8 I think they ranked number one or at least  
9 in the top decile in just about every measure you  
10 look at, not that past performance is a perfect  
11 indicator of future, you know, performance. But  
12 teams like that, you know, usually there's  
13 something to it.

14 MR. HOLMES: I was there for the meeting as  
15 well. I think what carried the day for Loomis  
16 was the upside capture and the downside capture.

17 Loomis has the highest of the upside  
18 capture. They all -- they all have attractive  
19 upside and downside capture. Loomis was the only  
20 one that got to over 100 on the upside capture.  
21 They all protected on the downside. But Loomis  
22 was probably the most consistent and the most  
23 attractive.

24 And like Joey said, I think it was the  
25 seven-year mark, they're almost identical. So in

1 addition -- and so the upside, downside, the fee,  
2 and then also there's a flexibility that's built  
3 into the -- Loomis's process that was appealing  
4 to them as well. And I think that flexibility  
5 has led them to do well or less poorly over a  
6 multitude of environments.

7 So what we've seen with a lot of growth  
8 managers was that, whereas they may protect in a  
9 certain market environment, Loomis did the best  
10 in protecting in 2008. Most of them participated  
11 on the upside in 2009. But then later in, say,  
12 2013, 2014, whereas a lot of the growth managers  
13 in that time period started to underperform the  
14 benchmark, Loomis, because of the flexibility in  
15 their process, was able to maintain some of the  
16 leadership above the -- or excess performance  
17 above the benchmark.

18 It didn't mean that they became -- they  
19 switched styles, if you will. They didn't become  
20 value managers overnight, but their process was  
21 such that they were able to maintain some of that  
22 leadership. I lay a lot of that at the feet of  
23 the low turnover in the portfolio. They're had a  
24 very long time horizon when they purchase  
25 securities. Five years.

1 I see that more with international managers  
2 from Scotland. I say Scotland just because  
3 they're cheap and they don't want to pay  
4 transaction fees. That's tongue in cheek,  
5 obviously.

6 MR. CRAIG: Yeah. I was going to say, I  
7 think that approach that they have, and they  
8 emphasized several times the private equity model  
9 where they're not really looking quarter to  
10 quarter. They're looking, you know, for  
11 long-term value creation, and the conviction that  
12 they have to have, and a name that goes into the  
13 portfolio has to be extremely high.

14 So I think that type of discipline and, you  
15 know, the quality companies that they're buying  
16 all gets back into managing risk and, you know,  
17 really being able to -- if they're good, you  
18 know, that should show up over a full cycle  
19 consistently and not be as susceptible to, you  
20 know, periods of significant underperformance and  
21 overperformance where you make it up.

22 MR. HOLMES: The one thing -- I'm sorry. I  
23 didn't mean to -- the only thing about Loomis  
24 that -- again, I don't know which way the Board  
25 and the committee are going to vote.

1           Loomis has the highest assets under  
2 management for the products. And so at some  
3 point in time size can be the enemy to  
4 performance.

5           I'm glad that they've closed the product,  
6 but we have to continue to monitor it from here,  
7 especially if they were to sometime choose to  
8 reopen the product or they're going to piggyback  
9 on the product in some different way, because  
10 that could make performance deteriorate.

11           MS. DEVINE: Well, they mentioned 60 billion  
12 in capacity, which is extraordinary if they  
13 really thought that they needed to close at 30  
14 when they had 60.

15           But they've got two other strategies,  
16 potentially a third, that they're trying to grow,  
17 and there's tons of overlap in all of these  
18 strategies.

19           So I suspect they're soft closing the large  
20 so that they can grow their all cap and their  
21 global growth, and they're developing along shore  
22 (phonetic). So I think that's where they're  
23 trying to leave some capacity so they can, you  
24 know, distribute those other three strategies.

25           MR. HOLMES: Exactly. Right now the overlap

1           between the all cap and -- is not huge, but  
2           that's why I said we have to monitor that going  
3           forward.

4           MS. DEVINE:   Yeah.   So Aziz, does he have a  
5           contract that you're aware of at this point with  
6           Loomis?   You know, what is -- a key person of  
7           risk, clearly, with that, so what is his contract  
8           there?

9           MR. HOLMES:   I don't know.   I'll have to  
10          check with our team.   I don't know offhand, but  
11          our team will.

12          MS. DEVINE:   That's the number one risk.  
13          And the way I'm looking at this, and correct me  
14          if I'm wrong, but we have Sawgrass.   We have a  
15          very low beta exposure --

16          MR. HOLMES:   Correct.

17          MS. DEVINE:   -- to the Russell 1000 growth.  
18          It needs to be paired with something that can  
19          give you growth performance.   HS, I really like  
20          the firm.   I love the 100 ownership.   I love that  
21          in both of these firms, not the Loomis so much.

22          But that's more of a core portfolio.   That's  
23          a core with a growth tilt, if you will,  
24          portfolio, and that, to me, isn't pairing very  
25          well with Sawgrass, not for what, I think, we

1 want to get out of our growth portfolio.

2 So for me, I don't see a backup, per se. I  
3 see Loomis is the most appropriate solution,  
4 albeit, the asset size, but I don't think that's  
5 going to get in Aziz's way at this point in time.

6 And I didn't see the other two as kind of  
7 satiating the need for real growth, you know,  
8 more traditional growth exposure to complement  
9 Sawgrass.

10 MR. HOLMES: I agree with you on HS. I  
11 would say that Sustainable Growth Advisors fits  
12 that bill as well.

13 MS. DEVINE: But they have a very  
14 conservative -- again, a very low upmarket  
15 capture. And I think we need to get some of that  
16 upmarket capture, which we're only going to get  
17 that out of Loomis, and it's not even that  
18 aggressive, if you will.

19 MR. HOLMES: Well, I think -- I think  
20 they've got -- I see, yeah. They're about 80 to  
21 almost 90 percent.

22 MS. DEVINE: 90 percent upmarket.

23 MR. HOLMES: Yeah.

24 MS. DEVINE: Cap. Yeah. So we don't have  
25 any manager here that's going to give us more

1 than the market, more than the Russell 1000  
2 growth.

3 MR. HOLMES: Yeah.

4 MS. DEVINE: To pair that with something  
5 that, again, is a very low beta Sawgrass  
6 portfolio.

7 MR. HOLMES: Yeah. Our experience has been  
8 that to get much more of that, you have to start  
9 leaning towards momentum-based managers. And we  
10 prefer higher-quality, sustainable growth-type  
11 managers.

12 MR. LEWIS: And those managers can still  
13 deliver alpha over a full cycle --

14 MR. HOLMES: Yeah.

15 MS. DEVINE: Over a long cycle.

16 MR. LEWIS: -- maybe just not sort of lead  
17 in periods of high beta performance.

18 MR. HOLMES: Yes.

19 MR. LEWIS: I agree with Tracey. I think  
20 the key man risk around Aziz is really, really  
21 critical here. He didn't appear today to  
22 present. Maybe his schedule didn't allow it.

23 MR. HOLMES: That's why they hired the  
24 guy -- he's doesn't go on the road. That's why  
25 they hired the guy. He's the product manager and

1 he's the one who makes the pitch, and Aziz stays  
2 in the office.

3 MR. KOWKABANY: How old is Aziz?

4 MR. HOLMES: I don't know. I'll have to  
5 check with the research.

6 MR. LEWIS: And do we know if Loomis's model  
7 includes ownership for portfolio managers like  
8 Aziz in the business, or do they have outside  
9 ownership or -- is he invested --

10 MR. HOLMES: They have outside ownership.  
11 They're owned by Natixis.

12 MS. DEVINE: Are you referring to whether or  
13 not he's invested in his strategy?

14 MR. LEWIS: Actually, both. Does he own it  
15 and is he invested?

16 MS. DEVINE: Yeah. So Natixis owns Loomis.  
17 And so it's a very different work structure than  
18 the other two entities --

19 MR. HOLMES: Right.

20 MS. DEVINE: -- you know, the boutique  
21 structure is awesome when it's 100 percent  
22 employee owned, or almost in one case, for SGA.

23 That said, Loomis has a lot of respect in  
24 terms of the way that they manage this and their  
25 employees, et cetera. I too don't know the

1 ownership that Aziz has, whether or not it's in  
2 the strategy itself how many assets and what-not.  
3 It's just a different structure.

4 He seems to operate well in these large  
5 organizations, coming from the Evergreen world,  
6 and that's where I come from, so I'm familiar  
7 with the background there. There was tremendous  
8 respect for him back then as well.

9 I was surprised to hear that Wells, which  
10 acquired Wachovia, which acquired First Union,  
11 which is what owned Evergreen -- I was surprised  
12 to hear that they were allowed to port their  
13 entire track record. That surprised me to hear  
14 that. So that was encouraging as well. That  
15 seems like a clean . . .

16 I personally only see one solution here that  
17 I would advocate in terms of pairing with  
18 Sawgrass, from that perspective alone. I liked  
19 all three firms. But pairing with Sawgrass, I  
20 thought Loomis was the best idea there.

21 MR. KOWKABANY: I agree with that.

22 DIRECTOR JOHNSON: All right. Well, we need  
23 a motion.

24 MR. LEWIS: Entertain a motion?

25 MR. KOWKABANY: I'll make the motion that we

1 choose Loomis.

2 MS. DEVINE: I'll second the motion that we  
3 recommend Loomis.

4 MR. LEWIS: Okay. So we have a motion to  
5 recommend to the Board of Trustees the hiring of  
6 Loomis Sayles for the large cap growth.

7 All those in favor?

8 (Responses of "aye.")

9 MR. LEWIS: None opposed. So it's  
10 unanimous.

11 MR. KOWKABANY: So you're saying we're not  
12 going to recommend a second?

13 MS. DEVINE: That was just my opinion.

14 MR. LEWIS: Unless we think the execution  
15 risk of getting them hired on the terms that we  
16 heard today is high, I would agree that we just  
17 need one, one option here.

18 MS. DEVINE: Something that did come up that  
19 our attorney mentioned, and my ignorance here,  
20 something about Florida -- Protect Florida Law.

21 How does that relate to a commingled  
22 vehicle? If we go with Loomis, my understanding,  
23 Dan, is you said we need to stick with a  
24 commingled fund.

25 MR. HOLMES: Yes.

1 MS. DEVINE: And how is that going to then  
2 impact our being able to restrict anything or  
3 give them any kind of stock specific  
4 restrictions?

5 MR. HOLMES: Bob, does the statute apply to  
6 commingled funds?

7 MR. SUGARMAN: I need to take a look at  
8 that. That's -- I don't think you're going to  
9 have a problem with Loomis. And it's doubtful  
10 that they're investing in anything that would run  
11 afoul.

12 MR. HOLMES: No. If memory serves, it's  
13 been a couple years since I've looked at the act,  
14 I think that commingled funds are not counted.

15 And I think they also -- Loomis also said  
16 that they use ADRs, which are technically  
17 US-based securities that trade on US exchanges.

18 MR. SUGARMAN: Yeah. I don't -- if Loomis  
19 is the recommendation of the Board, I mean, a  
20 second choice would be okay. But Loomis is  
21 widely dealt with by our other clients. I think  
22 we'll be able to get a contract from them.

23 Pedro is the one who does these. I'm not  
24 sure if we've had commingled funds contracts.  
25 But Loomis has been around a long time, has got a

1 lot of depth in this market. So we should be  
2 able to fairly quickly get a contract with them.

3 MR. BROWN: Well, I like HS, but Loomis is  
4 the clear front-runner.

5 MR. PATSY: So I want to make sure I  
6 understand the recommendation from the FIAC --

7 MR. BROWN: Loomis --

8 MR. PATSY: You're recommending Loomis. And  
9 what's their second?

10 MR. BROWN: They're not giving a second.

11 MR. PATSY: Okay.

12 MR. BROWN: I make a motion for Loomis to be  
13 our first and only -- you know, I just don't  
14 think there's going to be an issue.

15 MR. PATSY: Second.

16 CHAIRMAN TUTEN: We have a motion and a  
17 second. Do we have questions, comments here?

18 I ran all the numbers, returns, downside  
19 capture, upside capture, standard deviation,  
20 while everybody was talking.

21 Loomis -- surprisingly, HS, if they had had  
22 a ten-year history was in the ball game, based  
23 just on those numbers. But since they cut off at  
24 7, that kind of cut them off for me.

25 MR. HOLMES: They've got ten now, but --

1           CHAIRMAN TUTEN: Yeah. So Loomis was  
2 clearly, at least along these figures, the  
3 winner.

4           All in favor?

5           (Responses of "aye.")

6           CHAIRMAN TUTEN: Any opposed?

7           (No responses.)

8           CHAIRMAN TUTEN: No. There we go. Perfect.

9           DIRECTOR JOHNSON: Mr. Chair --

10          CHAIRMAN TUTEN: Go ahead.

11          DIRECTOR JOHNSON: Before we fall apart  
12 here, I want to make sure I get something on the  
13 agenda, but I don't want to interfere with Rick.

14          MR. PATSY: No. He and I are just going to  
15 have a sidebar.

16          DIRECTOR JOHNSON: All right. So I've got  
17 more business to do.

18          Your meeting is adjourned?

19          MR. LEWIS: We're adjourned.

20          DIRECTOR JOHNSON: There was an assignment  
21 that you talked to me about yesterday and that  
22 you wanted to get on the record.

23          CHAIRMAN TUTEN: Right. The City Council  
24 votes on this thing -- Tuesday? Remember, we  
25 sent them a whole list of recommendations.

1 DIRECTOR JOHNSON: Monday.

2 CHAIRMAN TUTEN: And simply what I did, I  
3 just want everybody to know --

4 (Inaudible due to simultaneous speech and  
5 commotion.)

6 MR. BROWN: All right. Great.

7 DIRECTOR JOHNSON: Thanks, everybody.

8 CHAIRMAN TUTEN: Adjourned.

9 (The meeting adjourned at 12:30 p.m.)
