Capability Statement

BUSINESS SUMMARY:

The Summary should a paragraph that tells your reader who you are and what you do. If you wish, the paragraph can include a brief history of the business.

CAPABILITIES

Areas of expertise – types of work you can do for your client. Use short sentences or bullet statements. This should not be a long narrative about your capabilities or areas of expertise.

FACILITIES AND EQUIPMENT:

List all facilities, equipment and resources used to manufacture the products or provide the service(s). Include unique qualifications, techniques and approaches used to perform work, including any state-of-the-art equipment or capabilities that are part of your business.

EXPERTISE:

A brief summary of your expertise, as well as that of your key personnel/staff, highlighting their education and technical experience as it relates to your business.

CUSTOMERS:

Provide a list of at least three or four of your key customers, past or present. Company names are sufficient.

LIST CONTACTS

SUMMARY

Capability Statement should be no more than 2 pages – remember, keep it simple, but tell the reader what makes you special and why they should choose to do business with you. This can be used as a stand-alone document to market your business, or attached to any pertinent literature you may already have, which will complete the story you want to tell about your business. This along with a simple cover letter can introduce your company to any government agency or large business.

Why ABC Company?

- Outstanding Reliability...
 2% failure rate versus 15-20% failure rate of leading brands.
- 3 Year Warranty
- Standard & Custom built
- Over 40 years experience in electronics industry
- Stand alone or network... entry level computers to super servers
- Competitive Pricing
- Assembled in the USA
- Individual components selected for durability

Company Background

ABC Company was founded by John Smith, who was also the founder of Non-Linear Systems, home of the world's first digital voltmeter. He also founded XYZ Corporation, maker of reliable portable personal computers in the 1980's.

Performance History

• SAIC Corporation

Supplied over \$1M in desktop PCs to date. SAIC now purchases 100% of desktop PCs from ABC Company.

EXCEPTION TO THE RULE

II. Capability Statement

GT Global Staffing has consistently and continuously provided the highest quality staffing support to Government agencies since 1979. Our in-house management team collectively represents 45 years' staffing industry experience and specializes in successfully delivering administrative, light industrial, and professional personnel to Federal, State, and local government agencies. Our successful track record is built upon a combination of diligence, flexibility, and process, all of which provides a thorough understanding our clients' needs. Our high-quality service, coupled with competitive rates and our extensive database of qualified personnel, combine to make GT Global Staffing the right choice for your staffing needs.

As you will see from the successful past projects listed below, GT Global Staffing specializes in providing the following Temporary Administrative and Professional Services to our Federal customers:

- Professional Personnel
- Administrative and Clerical
- Automated Data Processing
- Data Entry
- Mailroom
- Maintenance Workers, Electricians, Plumbers, Pipefitters, Handymen, Carpenters, and Painters
- Automobile Mechanics, Heavy Equipment Mechanics, Helicopter Mechanics
- Optical Repair Technicians

Having the right person available when you call is a key to our success. GT Global Staffing starts the staffing process well before your first request. Our staffing specialists meet daily to anticipate our clients' needs and work to ensure we have the highest-quality candidates in our database when you call.

Our time-proven recruitment processes have resulted in an industry-leading database of qualified and "ready-to-place" candidates, carefully selected by experience, skill, and background that most closely and precisely matches the requirements of our current and potential clients.

GT Global Staffing has successfully developed long-term relationships with our Government clients because of our ability to quickly meet your staffing needs. We customize employee handbooks, orientations, pre-assignment testing, assessments, and training—and more—to meet your needs.

Our ability to continuously deliver exceptional customer service results directly from our strong quality control (QC) process. Our commitment to quality continues throughout the staffing assignment and follows well-defined procedures:

Step 1: Within 30 minutes of the agreed-upon arrival time, we call to verify that our employee has arrived on time, reported to the right department, and is ready to work.

Step 2: Every Friday (or on a day of your choice), with your permission, we ask you to give us an overview of each employee we have placed for you, including his or her attendance, alertness, cooperation, and work quality. We appreciate your candor when making the calls so we may better evaluate our employees and fulfill your company's needs. Of course, please feel free to contact us anytime. Your satisfaction is our utmost consideration and your feedback drives our process of continuous improvement.

Step 3: At each assignment's conclusion, a quality control card is sent that asks for an overall rating of our employee. This card becomes a part of the employee's permanent records in our office.

Step 4: We annually review all performance cards and our overall quality of service.

Feedback is an essential tool to providing quality services. In the event that an issue arises with an employee we placed, we take immediate action in the form of verbal and/or written warnings, and if necessary, termination and replacement. All incidents are documented and added to the employee's file, thereby allowing us to continuously improve our service when placing that employee again. We guarantee replacement of any assigned temporary employee who does not meet our customer's expectations.

III. Past Performance: A Record of Unsurpassed Client Satisfaction

The following past performance examples typify our successful record, high level of services, diversity of skills and talents, and precision that GT Global Staffing is committed to delivering to your organization—clerical, administrative, skilled trades, and even helicopter mechanics. These examples illustrate our successful process of anticipating client needs, targeted recruiting, careful identification of the right candidates, and exceptional customer service.

Past Performance 1—

U.S. Department of the Army, Virginia Army National Guard

Global Staffing has formed a joint venture with Westmoreland Inc., **Project Description:**

Westmoreland GTGS JV. The joint venture is a service disabled veteran

owned small business concern.

The VA HAC agency has needs for a diverse mix of temporary employees. Westmoreland/GTGS JV provides employees to support this agency in the following areas: warehouse, delivery, customer service, medical billing clerks, assistant contracting officers and accounting technicians, on a variety of contracts.

This relationship started with a small order of personnel on a single contract, but due to the quality of support provided by Westmoreland/GTGS JV, more contracts were added, steadily increasing the number of personnel supporting the VA HAC. In addition, multiple employees have migrated from contractor to

permanent status with the agency.

Past Performance 6-

U.S. Department of Commerce, National Institute of Standards and Technology (NIST)

Contract Number: R7-CASU-06-0002

Period of 2002-2005
Performance: \$920,000

Contact: Eileen Hinkle/Leroy Gutierrez

325 Broadway, MC 19400

Boulder, CO 80305

Phone: 303-497-3955/303-497-5652

Project Description: For more than 5 years GT Global Staffing has delivered high quality executive

secretaries, administrative and clerical personnel to the National Institute of

Standards and Technology (NIST).

With our database of qualified and "ready to place" candidates, GT Global Staffing has been able to supply the best possible candidates matched to NIST's defined needs by anticipating future and surge requirements.

NIST was so pleased with our placements that it routinely requests our personnel by name, has hired GT Global Staffing personnel as permanent employees, and has rewarded the exemplary performance of our temporary personnel with cash bonuses and extended assignments.

In addition to our success in providing administrative and clerical staff at NIST, we provided a large custodial staff to the agency for over 3 years, a period marked by consistent and numerous accolades through emails, letters of recommendation, and cash bonuses.

When a Congressional mandate caused this contract to be transferred to the Committee for Purchase from People Who are Blind or Severely Disabled (through NISH), almost all employees placed by Global Staffing were kept in their positions—a testament to the high quality of personnel we place.

Past Performance 7—

U.S. Department of the Army, Arizona Army National Guard

Contract Number: R7-CASU-06-0002

Period of
Performance:
Contract Value: \$725,000
Contact: James Cobb

5425 E. McDowell Rd. Phoenix, AZ 85008 Phone: 602-267-2811

Email: james.cobb@az.ngb.army.mil

Project Description: GT Global Staffing has been supporting the Arizona National Guard with a

variety of highly specialized, skilled personnel for the past 2 years. Our successful placement of helicopter mechanics, auto mechanics, heavy equipment mechanics, optical repair technicians, and material handlers is vet

another testimony to the diversity, flexibility, and range of talent that we are able to deliver to our clients.

Frankly, many of our competitors would have found it difficult to find and recruit qualified helicopter mechanics, especially, given the highly specialized nature of the work and the exacting quality required. But GT Global Staffing had the process in place to identify, find, and recruit specialists capable of the exacting precision and quality to maintain and repair military helicopters—not to mention the other skilled workers required for this engagement.

Past Performance 8—

U.S. Department of the Interior, Bureau of Indian Affairs (BIA)

Contract Number: HHSP3502008000061-I

Period of 2002-2008

Contract Value: \$280,000.00

Contact: Stephen Manydeeds

12136 W Bayaud Ave #300 Lakewood, CO 80228 Phone: 303-969-5270 Fax: 303-969-5273

Project Description:

By listening carefully to what the BIA required, GT Global Staffing so precisely matched an employee to the client's needs that not only did the employee excel in the position, but was advanced to positions of increased trust and responsibility—the Bureau even recommended additional education and training to allow even further professional advancement. The Bureau requested all our employees to be of Native American descent, and any open positions were filled promotly, following these guidelines.

The BIA experience highlights the importance of GT Global Staffing's selective and exhaustive process of identifying, screening, and recruiting the highest quality personnel before placement and listening to our clients' needs, feedback, and expectations—matching the right person to the right job--only to consistently exceed those expectations.

About United Consulting

United Consulting is a multi-discipline, multi-owner consulting firm based in Atlanta, Georgia, specializing in geotechnical and geophysical engineering, environmental services, water resources, site and property evaluation and materials testing.

United Consulting has a reputation for successfully completing many of the largest, most challenging projects in the southeastern United States. In fact, we have been listed in the Atlanta Business Chronicle Book of Lists as one of the "Top 25 Engineering Firms in Atlanta" for the past six years. We consider the long view with regard to its business goals and its relationships with clients. "We're here for you" is not just a slogan at United Consulting; it's how the firm does business. What sets United Consulting apart from other engineering firms is its foward-thinking and client-focused service. We are proud of our over 1,000 clients with a 90% repeat customer base.

Experience

Hartsfield-Jackson Atlanta Internation Airport - 5th Runway Bridge Atlanta, Georgia

The 5th Runway Bridge over Interstate 285 is the key to the successful completion of the \$5 billion dollar expansion program of Hartsfield Atlanta International Airport. With this new runway, Atlanta will continue to lead the growth of the State of Georgia and the southeast. This project is a design-build competition won by the team of Archer-Western Contractors, Parsons Brinckerhoff Quade and Douglas, Heath & Lineback Engineers, and United Consulting for a price of \$159,000,000.

The bridge is 735 feet long by 910 feet wide. Interior bents are strategically placed between east-bound and west-bound lanes of I-285 and collector-distributor roads in a four span configuration. In order to provide support

for the extremely high loads of aircraft landing on the runway and the dead-weight of the concrete structure, United Consulting recommended and monitored installation of a combination of 280 ton steel piles bearing in competent rock and shallow foundations bearing in partially weathered rock.

Settlement of the bridge will not be a problem because its foundation is supported on rock by steel piles and shallow foundations on partially weathered rock. However, settlement at the transition from the bridge to the soil-supported runway is very critical. Soil depths, at each end of the bridge, range from 40 feet to 125 feet.

Portions of these materials are very soft soils that have been decomposing in place for millions of years while the upper portions are engineered fill ranging in depth from 20 feet to 80 feet. Settlement in the areas of maximum fill is expected to be in the range of 16 inches to 24 inches over a period of two years. After the runway is in operation it is essential that settlement be limited to ½ inch over 20 years to provide safe landings and takeoffs for aircraft on the 5th runway.

What is the solution to controlling settlement in the soils at the ends of the bridge? United Consulting researched many possible solutions before deciding upon employing a combination of techniques. Below the water table the Team decided to install wick drains to provide a path for the water to be squeezed out of the soft soils. For material above the water table Deep Dynamic Compaction was utilized to densify the near surface soils. In the fill material above original grade, horizontal drainage blankets are installed to accelerate settlement.

The weight of the fill will cause the original soils to consolidate and the fill will experience settlement within its mass. Settlement will be measured with state of the art monitoring instruments, settlement sensors, extensometers, settlement plates and pressure cells, to capture actual movement in residual soils and fill soils. These data will be compared to predicted settlement calculations made before construction. This process will be the equivalent of conducting two giant full-scale settlement tests. These tests will be conducted for approximately 20 months and then calculations to predict settlement over the next 20 years will be made.

Capabilities Statement

Heaving of I-285 pavement may occur if fill is placed too rapidly behind retaining walls adjacent to the highway. Vibrating wire piezometers are in strategic locations to measure pore water pressure. Heave potential will be evaluated based on pore pressures being exerted on the soils under the pavement. The rate of fill placement operations is governed by increases in pore pressures and the rate of dissipation of pore pressures.

Additions at Dobbins Air Force Base Marietta, Georgia

United Consulting conducted a Preliminary Geotechnical Exploration for the proposed additions of a fitness center and additional reserve training building at Dobbins Air Force Base. The purpose of the Preliminary Geotechnical Exploration was to determine the general type and condition of the subsurface materials at the project site, and to provide preliminary recommendations to guide in site development, grading, foundation design, excavation and earthwork.

The Fitness Center Addition was 1,328 square meter addition located to the north of the existing building. The addition building contained an indoor basketball court, an aerobics/exercise area, a cardiovascular training area and a locker room. The portion of the project site located in the area of the Reserve Training Building Addition was previously developed with a asphalt paved parking area (approximately one-half) located adjacent north to the building. The addition to the Reserve Training Building was a 795 square meter, two story steel framed building with masonry exterior. The building is used primarily for administrative duties and supplies.

The scope of our services has included the following items:

- 1. Conducting Standard Penetration Test (SPT) borings near the proposed addition to the fitness center, and near the proposed Reserve Training Building addition to determine the general condition of the subsurface soils;
- 2. Review of soil samples obtained during our field testing program by a Geotechnical Engineer for further identification and classification;
- 3. Collected bulk soil samples and relatively undisturbed soil samples for laboratory testing;
- 4. Conducted laboratory tests on selected soil samples.
- 5. Analyzed the existing soil conditions with respect to the proposed construction

United Consulting recommended that a Final Geotechnical Exploration be performed at the project site once the development is finalized.

O'Hare International Airport Chicago, Illinois

United Consulting utilized the Ground Penetrating Radar (GPR) method to assist in identifying subsurface utilities, service tunnels, underground vaults, and various other subsurface targets beneath active portions of the taxiways, runways, and service roads of the airport. This work was performed in conjunction with installation of new massive underground infrastructure for airport operations.

Capabilities Statement

All survey and investigative work had to be performed during the night hours of 10 p.m. and 5 a.m. to limit impact on airport operations. Coordination between air traffic control and airport security had to be maintained at all times to coordinate investigative work on active taxiways and runways. In addition, destructive testing was not an option due to the concern of any aircraft being damaged from debris.

Ground Penetrating Radar was utilized because it is a non-destructive technique and it was critical that no damage was caused to the existing airport facilities. GPR data acquisition can be performed rapidly so shutdown time for runways and taxiways was kept to a minimum. The data was then transferred to the master subsurface utility database through electronic drawings.

Greensferry Basin Sewer - Water Replacement Atlanta, Georgia

United Consulting has been performing a Quality Level "B" Subsurface Utility Eengineering (SUE) effort for the Greensferry Basin Sewer/Water Replacement project of the approximately 10.89 mile project section. The level of accuracy for Quality Level "B" is ± 12 inches on both the horizontal and vertical axis. Utilities are marked in the field according to the APWA Uniform Color Code and transferred to the site drawings for reference prior to trenching operations. United Consulting has utilized state-of-the-art surface geophysical methods; including ground penetrating radar, radio detection, and magnetometer to complete this complex urban subsurface environment. Typical working depth range in piedmont soils for subsurface utility locate by geophysical methods is up to a maximum of 15 to 20 feet. Our professionals have identified multiple active utility targets and abandoned features such as street car tracks, UST's, building foundations and numerous geological features (such as voids).

Orlando International Airport Orlando, Florida

United Consulting was hired to assist in locating a 14" diameter direct feed fuel line that could not be identified in an area of proposed taxiway and service road expansion. The direct feed fuel line was active and could not be damaged due to the fact of a shallow ground water table and breaking the line would not only suspend airport fueling operations, but would also cause significant environmental contamination of the local groundwater table. Several traditional utility locate methods were utilized to locate the fuel line, but were unsuccessful. United Consulting utilized our ground penetrating radar (GPR) technology to locate the fuel line both horizontally and vertically in the proposed construction areas allowing for a safe design and construction effort for the expansion. The GPR method was completed within approximately 2 days. This non-destructive testing technique not only located the elusive fuel line, but was also performed in a timely manner.

Capability Statement

ABC Geographers, Inc. 123 Anywhere Street, Spokane, WA 99201 509-555-5555

www.abcgeographers.com

ABC Geographers, Inc. is a geographic knowledge company. We offer both an out-of-the-box GIS solution for non-specialists and we provide customized solutions to facilitate effective location-based decision-making. We understand how geography – when easily shared and integrated with visualization and analytical tools - can be a powerful mechanism to enable all levels of decision makers and project managers, whether they are in senior positions or distributed throughout an entire organization. Our products and services integrate location and time-dependent information (e.g., sales, farmer location, weather data, risk models) with an organization's own data. This integration creates an innovative spatial/temporal decision support system for institutions and businesses working in agriculture, agribusiness, food security, natural resource management, and economic development.

The success of business and development initiatives depends on information. The quality of decisions determines impact. Both location and timeliness are critical to advisors, growers, distributors, field trial, production, food security logistics, watershed engineers, foresters, fire prediction, etc. and most especially for those in policy and regulatory affairs. ABC's know-how and vision combine to deliver a comprehensive suite of technology that is both spatially explicit and temporally acute. This know-how ensures more efficient and more effective decisions across the information chain.

What ABC Geographers, Inc. is: We build Spatial/Temporal Information Systems (STIS) fully customizable to our client's needs and specifications. We are a knowledge company specializing in solutions for agriculture, agribusiness, natural resource management, and international development. Our off-the-shelf solution, AWhere, is rapidly becoming the standard GIS solution for non-specialists. Our clients include agri-businesses, crop insurance, international development organizations, education, politics and lobbying. We are a knowledge company - we bring experience and insight - and value - on 'why' knowing 'where' the focal point is and then 'what' to do 'when' and for 'whom'. This is the value return to our insight and innovation - our products can connect biology (field trials, production information etc. to real-time conditions and thus 'biological' outcome estimates and predictions) to 'customers' that include growers, scientists, commodity traders, food security/relief experts and politicians and policy makers. Connecting to real customer resource management (CRM) increases decisiveness (knowing where, when and who), makes efficiencies (freeing precious time), and increases effectiveness (doing things and seeing patterns and trends that you could not see before) all of which directly influence the bottom line impact of decisions - and investments. We deliver knowledge solutions through spatial and temporally specific technology.

We utilize GIS technology and we create tremendous value with it but our technology is not built for the GIS specialist. ABC builds software for everyone. Our 'Distributed, Cascading, Knowledge Model'™ is applied common sense. We integrate data and software and get the combination in front of a wide audience for the purpose of decision making.

The key distinguishing asset that ABC brings is the technology to enable the knowledge worker - and not just the specialist - to utilize geographic-time-series information to make better decisions.

ABC follows the ESRI standards and ABC products are fully compatible – and interoperable via ABC Exchange technology (an ArcGIS extension reads and writes AWhere Exchange files) - with other ESRI software products. Further, ABC advocates the use of both ArcView and ArcInfo. In the hands of a trained specialist, these software can deliver elegant solutions. The utility of these high-end systems is necessary but only appropriate for a small segment in the spectrum of potential users of GIS technology.

Our Keystone products: AWhere and MetWhere - both with Exchange

All ABC software is object oriented in design enabling considerable flexibility in use and in customization. ABC Geographers, Inc. uses both COM and increasingly .NET tools to maximize both software integrity and robustness while maintaining a highly desirable modular structure. This modular structure enables ABC to rapidly develop and deploy custom tools which can then be integrated with other modules.

Experience:

For more detailed biographical information and other subject matter experts, visit: http://cathyharris.com/theteam.htm

Several consultants with relevant corporate teambuilding, diversity, conflict resolution, and communication experience lead the Training Team available to implement and monitor projects. While each consultant is highly skilled to conduct training individually, some programs are team-facilitated. A brief biography of each lead team member follows:

Cathy Harris - Program Manager - Cathy Harris is founder and President of C. Harris Companies, Inc., a management and staff development firm focused on the strategic planning and implementation of strategies in diversity, conflict resolution, leadership development, cross-cultural communication, career development, corporate and outdoor team building. She is a dynamic keynote speaker, trainer, facilitator and consultant for businesses, corporations, universities and government organizations. Cathy explores their challenges and dramatically assists in improving their corporate culture, morale, productivity, team and personal effectiveness. She's known for her ability to move people beyond their personal biases and assumptions toward one another and engage in dialogues that build healthy, working relationships. She specializes in fostering diversity, communication and dialogue skills, teambuilding and conflict resolution.

Ted Quant, BA - Senior Facilitator - is a trainer, social activist, and administrator specializing in conflict resolution and communication in corporations and community groups. He currently serves as the director of Loyola University's Twomey Center for Peace Through Justice, which addresses social problems in the New Orleans area.

Michael P. Kane, Ed.D. - Senior Facilitator - is an experienced, multi-lingual, international training consultant with specialties including communications, managing diversity, strategic management, leadership, group processes, conflict resolution, customer relations and outdoor teambuilding.

Dorothy "Dot" Waldrup, JD - is an attorney with 27 years of practice with expertise in domestic law and employment discrimination. She has represented cases in Louisiana, the Federal District Courts and the U.S. Supreme Court. She represented the plaintiff in the case that changed the century-old provision in Louisiana called the "Head and Master" clause, which influenced the equitable distribution of property in divorce cases. Ms. Waldrup brings to coaching, training and facilitating the desire and skill to create a new paradigm in the workforce; one that creates relationship based on respect and responsibility.

Suzanne Antone, MBA - has helped groups of people find the energy to build the teams they need for positive change. Her work has allowed her to live in six U. S. states and three foreign countries, affording her great experience in the process of reaching out to others in order to build community. Her expertise lies in diversity, interpersonal communications, marketing and management. Her government clients include the U. S. Navy - SUPSHIP, Housing and Urban Development, Federal Aviation Administration, Baton Rouge Office of the Mayor and Singapore Civil Service.

Julianna Padgett, Ph.D - is an experienced facilitator and trainer who specializes in letting groups collectively gather their thinking, confirm their common strengths and launch their energies toward strategic progress. As an assistant professor of social work at Southern University at New Orleans, she teaches in the areas of organizational development, community building and group process. She has facilitated in major planning and training projects such as the multi-year development of the Barataria-Terrebonne Estuary Project, Louisiana Alliance for Education Reform, the New Orleans Elder Action Coalition, Southern Strategy for Energy Renewal and other community-based organizations. She has been a long-time advocate for the needs of the elderly and is co-author of *Longevity Therapy: An Alternative Approach to Nursing Home Care* as well as co-producer/writer of several related videos. Dr. Padgett is on the board of several local New Orleans organizations, including ERACE, a group dedicated to increasing person-to-person communication between persons of all colors.

Kevin McNulty, BS, is a human relations and conflict resolution specialist with 15 years of broad experience as a consultant, facilitator, and speaker. He has coached employees and managers and all levels, consulted in many industries, and trained literally thousands of people. He has extensive training, specialization, and skill as coach and advisor to managers and supervisors on employee relations issues. As a human relations specialist, Kevin believes the experience he draws on the most is from his travels to 49 States and 22 countries, his service in the U.S. Air Force and at the U.S. Embassy in Tel Aviv.

Company

Established in 1983, Sound Communications is Vietnam-era veteran-owned, small business. We are the Midwest's leading supplier of digital recording solutions for video, voice and data. Our digital voice recording platform of choice is Mercom's Audiolog, and we are one of only six Mercom Platinum Dealers worldwide. Mercom's product line also includes MIQ Agent Evaluation Software.

In addition, we are also certified resellers and partners for VIQ Solutions (digital courtroom recording) and Concerto Software (contact center performance solutions). Sound Communications also develops and installs our own **SCI-DVR**: turnkey digital video recording solutions. Our systems are recording video, voice and data in hundreds of facilities throughout the Midwest and beyond.

Executive Bios

Garry Stephenson (Founder, President & CEO) has more than 20 years of experience in digital recording. He holds a bachelor's degree from Ohio University, and is a Vietnam-era veteran of the U.S. Navy. Garry serves on the Mercom Systems Advisory Board for Value Added Resellers.

Toni VanHorn (Vice President & CFO) has more than 25 years of experience in business and fiscal management. She is an alumna of Bowling Green State University and the University of Cincinnati, having studied Business Administration at both institutions

Darin Cooper (Systems Engineer & CTO) has more than eight years of experience in both mid-level business management and digital recording. He is a graduate of the University of South Florida, and was designated Sales Engineer of the Year by Mercom in 2003.
